## **From Airline Reservations To Sonic The Hedgehog A History Of The Software Industry:**

**From Airline Reservations to Sonic the Hedgehog** Martin Campbell-Kelly, 2004-02-27 A business history of the software industry from the days of custom programming to the age of mass market software and video games From its first glimmerings in the 1950s the software industry has evolved to become the fourth largest industrial sector of the US economy Starting with a handful of software contractors who produced specialized programs for the few existing machines the industry grew to include producers of corporate software packages and then makers of mass market products and recreational software This book tells the story of each of these types of firm focusing on the products they developed the business models they followed and the markets they served By describing the breadth of this industry Martin Campbell Kelly corrects the popular misconception that one firm is at the center of the software universe He also tells the story of lucrative software products such as IBM's CICS and SAP's R/3 which though little known to the general public lie at the heart of today's information infrastructure With its wealth of industry data and its thoughtful judgments this book will become a starting point for all future investigations of this fundamental component of computer history [A Profile of the Software Industry](#)

The Computer Boys Take Over Nathan L. Ensmenger, 2012-08-24 The contentious history of the computer programmers who developed the software that made the computer revolution possible This is a book about the computer revolution of the mid twentieth century and the people who made it possible Unlike most histories of computing it is not a book about machines inventors or entrepreneurs Instead it tells the story of the vast but largely anonymous legions of computer specialists programmers systems analysts and other software developers who transformed the electronic computer from a scientific curiosity into the defining technology of the modern era As the systems that they built became increasingly powerful and ubiquitous these specialists became the focus of a series of critiques of the social and organizational impact of electronic computing To many of their contemporaries it seemed the computer boys were taking over not just in the corporate setting but also in government politics and society in general In The Computer Boys Take Over Nathan Ensmenger traces the rise to power of the computer expert in modern American society His rich and nuanced portrayal of the men and women a surprising number of the computer boys were in fact female who built their careers around the novel technology of electronic computing explores issues of power identity and expertise that have only become more significant in our increasingly computerized society In his recasting of the drama of the computer revolution through the eyes of its principle revolutionaries Ensmenger reminds us that the computerization of modern society was not an inevitable process driven by impersonal technological or economic imperatives but was rather a creative contentious and above all fundamentally human development

**Smarter Banking with CICS Transaction Server** Chris Rayns,Neil Ashworth,Peter Beevers,Vesna Eibel,Fabrice Jarassat,Claus T Jensen,Alison Lucas,Anthony Papageorgiou,Alain Roessle,Nigel Williams,IBM Redbooks,2010-04-22 It goes

without saying that 2009 was a year of unprecedented change in global banking The challenges that financial institutions are facing require them to cut costs but also to regain trust and improve the service that they provide to an increasingly sophisticated and demanding set of customers In the past siloed and rigid IT systems often inhibited banks in their attempts to re engineer their business processes The IBM smarter banking initiative highlights how more intelligent software can be used to significantly improve the end to end integration of banking processes In this IBM Redbooks publication we aim to show how software technologies such as SOA Web 2 0 and event driven architectures can be used to implement smarter banking solutions Our focus is on CICS Transaction Server which is at the heart of most bank s core banking implementations

**ENIAC in Action** Thomas Haigh,Mark Priestley,Crispin Rope,2016-06-24 The history of the first programmable electronic computer from its conception construction and use to its afterlife as a part of computing folklore Conceived in 1943 completed in 1945 and decommissioned in 1955 ENIAC the Electronic Numerical Integrator and Computer was the first general purpose programmable electronic computer But ENIAC was more than just a milestone on the road to the modern computer During its decade of operational life ENIAC calculated sines and cosines and tested for statistical outliers plotted the trajectories of bombs and shells and ran the first numerical weather simulations ENIAC in Action tells the whole story for the first time from ENIAC s design construction testing and use to its afterlife as part of computing folklore It highlights the complex relationship of ENIAC and its designers to the revolutionary approaches to computer architecture and coding first documented by John von Neumann in 1945 Within this broad sweep the authors emphasize the crucial but previously

neglected years of 1947 to 1948 when ENIAC was reconfigured to run what the authors claim was the first modern computer program to be executed a simulation of atomic fission for Los Alamos researchers The authors view ENIAC from diverse perspectives as a machine of war as the first computer as a material artifact constantly remade by its users and as a subject of contradictory historical narratives They integrate the history of the machine and its applications describing the mathematicians scientists and engineers who proposed and designed ENIAC as well as the men and particularly the women who built programmed and operated it *CICS Transaction Server from Start to Finish* Chris Rayns, Sarah Bertram, George Bogner, Chris Carlin, Andre Clark, Amy Ferrell, Gordon Keehn, Peter Klein, Ronald Lee, Erhard Woerner, IBM Redbooks, 2011-12-07 In this IBM Redbooks publication we discuss CICS which stands for Customer Information Control System It is a general purpose transaction processing subsystem for the z OS operating system CICS provides services for running an application online where users submit requests to run applications simultaneously CICS manages sharing resources the integrity of data and prioritizes execution with fast response CICS authorizes users allocates resources real storage and cycles and passes on database requests by the application to the appropriate database manager such as DB2 We review the history of CICS and why it was created We review the CICS architecture and discuss how to create an application in CICS CICS provides a secure transactional environment for applications that are written in several languages We discuss the CICS supported languages and each language s advantages in this Redbooks publication We analyze situations from a system programmer s viewpoint including how the systems programmer can use CICS facilities and services to customize the system design CICS for recovery and manage performance CICS Data access and where the data is stored including Temporary storage queues VSAM RLS DB2 IMSTM and many others are also discussed [Information Technology and Military Power](#) Jon R. Lindsay, 2020-07-15 Militaries with state of the art information technology sometimes bog down in confusing conflicts To understand why it is important to understand the micro foundations of military power in the information age and this is exactly what Jon R Lindsay s *Information Technology and Military Power* gives us As Lindsay shows digital systems now mediate almost every effort to gather store display analyze and communicate information in military organizations He highlights how personnel now struggle with their own information systems as much as with the enemy Throughout this foray into networked technology in military operations we see how information practice the ways in which practitioners use technology in actual operations shapes the effectiveness of military performance The quality of information practice depends on the interaction between strategic problems and organizational solutions *Information Technology and Military Power* explores information practice through a series of detailed historical cases and ethnographic studies of military organizations at war Lindsay explains why the US military despite all its technological advantages has struggled for so long in unconventional conflicts against weaker adversaries This same perspective suggests that the US retains important advantages against advanced competitors like China that are less prepared to cope with the complexity of

information systems in wartime Lindsay argues convincingly that a better understanding of how personnel actually use technology can inform the design of command and control improve the net assessment of military power and promote reforms to improve military performance Warfighting problems and technical solutions keep on changing but information practice is always stuck in between

*Osiris, Volume 38* James Evans, Adrian Johns, 2023-07-18 Perceptively explores the shifting intersections between algorithmic systems and human practices in the modern era How have algorithmic systems and human practices developed in tandem since 1800 This volume of *Osiris* deftly addresses the question dispelling along the way the traditional notion of algorithmic code and human craft as natural opposites Instead algorithms and humans have always acted in concert depending on each other to advance new knowledge and produce social consequences By shining light on alternative computational imaginaries *Beyond Craft and Code* opens fresh space in which to understand algorithmic diversity its governance and even its conservation The volume contains essays by experts in fields extending from early modern arithmetic to contemporary robotics Traversing a range of cases and arguments that connect politics historical epistemology aesthetics and artificial intelligence the contributors collectively propose a novel vocabulary of concepts with which to think about how the history of science can contribute to understanding today's world Ultimately *Beyond Craft and Code* reconfigures the historiography of science and technology to suggest a new way to approach the questions posed by an algorithmic culture not only improving our understanding of algorithmic pasts and futures but also unlocking our ability to better govern our present

Software Rights Gerardo Con Diaz, 2019-10-22 A new perspective on United States software development seen through the patent battles that shaped our technological landscape This first comprehensive history of software patenting explores how patent law made software development the powerful industry that it is today Historian Gerardo Con Diaz reveals how patent law has transformed the ways computing firms make own and profit from software He shows that securing patent protection for computer programs has been a central concern among computer developers since the 1950s and traces how patents and copyrights became inseparable from software development in the Internet age Software patents he argues facilitated the emergence of software as a product and a technology enabled firms to challenge each other's place in the computing industry and expanded the range of creations for which American intellectual property law provides protection Powerful market forces aggressive litigation strategies and new cultures of computing usage and development transformed software into one of the most controversial technologies ever to encounter the American patent system

Software Evangelism and the Rhetoric of Morality Jennifer Helene Maher, 2015-08-27 Examining the layers of meaning encoded in software and the rhetoric surrounding it this book offers a much needed perspective on the intersections between software morality and politics In software development culture evangelism typically denotes a rhetorical practice that aims to convert software developers as well as non technical lay users from one platform to another e g from the operating system Microsoft Windows to Linux This book argues that software evangelism like its religious counterpart must also be understood as constructing moral and political values that extend well beyond the boundaries of the development culture Unlike previous studies that locate such values in the effects of code in use or in certain types of code like free and open source FOSS software Maher argues that all code is meaningful beyond its technical executable functions To facilitate this analysis this study builds a theory of evangelism and illustrates this theory at work in the proprietary software industry and FOSS communities As an example of political liberalism at work at the level of code these evangelical rhetorics of software construct competing conceptions of what is good that fall within a shared belief in what is just Maher illustrates how these beliefs in goodness and justice do not always execute in replicable ways as the different ways of decoding software evangelisms in the contexts of Brazil and China reveal Demonstrating how software evangelisms exert a transformative force on the world one comparable in significance to code itself this book highlights the importance of rhetoric in even the most seemingly a rhetorical of technical endeavors and foregrounds the crucial need for rhetorical literacy in the digital age

**Programmed Inequality** Mar Hicks, 2018-02-23 This sobering tale of the real consequences of gender bias explores how Britain lost its early dominance in computing by systematically discriminating against its most qualified workers women Harvard Magazine In 1944 Britain led the world in electronic computing By 1974 the British computer industry was all but extinct What happened in the intervening thirty years holds lessons for all postindustrial superpowers As Britain struggled to use technology to retain its global power the nation s inability to manage its technical labor force hobbled its transition into the information age In Programmed Inequality Mar Hicks explores the story of labor feminization and gendered technocracy that undercut British efforts to computerize That failure sprang from the government s systematic neglect of its largest trained technical workforce simply because they were women Women were a hidden engine of growth in high technology from World War II to the 1960s As computing experienced a gender flip becoming male identified in the 1960s and 1970s labor problems grew into structural ones and gender discrimination caused the nation s largest computer user the civil service and sprawling public sector to make decisions that were disastrous for the British computer industry and the nation as a whole Drawing on recently opened government files personal interviews and the archives of major British computer companies Programmed Inequality takes aim at the fiction of technological meritocracy

Hicks explains why even today possessing technical skill is not enough to ensure that women will rise to the top in science and technology fields Programmed Inequality shows how the disappearance of women from the field had grave macroeconomic consequences for Britain and why the United States risks repeating those errors in the twenty first century
