**Buying into the Environment** Christoph Erdmenger, 2017-09-08 Green purchasing or eco procurement by local and central governments has long been recommended in documents such as Agenda 21 to be a key although sometimes supplemental ingredient in the achievement of more environmentally responsible economies Certainly sustainable consumption cannot be considered a realistic goal without the full engagement of public authorities Many initiatives have been undertaken in OECD countries most successfully in Japan and Denmark where green public purchasing has been proven to be workable and highly effective while in other countries city municipalities have successfully pioneered the development of sophisticated public environmental purchasing policies However for the vast majority of countries and their major cities the potential for green public purchasing remains woefully untapped A key question is what would be the environmental impact if the majority of cities in Europe replicated the success stories of those leading the way Public procurement has after all been an important tool in achieving other public policy goals such as defence Why should it not be used as a tool to defend the environment The RELIEF project funded by the EU's City of Tomorrow and Cultural Heritage programme was established to answer exactly this question to define the true potential of eco procurement and to develop a strategy for change in Europe Buying into the Environment is the result of the research segment of the project which has now been completed A further stage to design a Europe wide action plan will follow in 2004 The book organised under the auspices of the International Council on Local Environmental Initiatives ICLEI analyses national approaches already tested and provides in depth surveys on the pioneer cities such as Hamburg Malmö and Zurich Serious attention is given to city specific hurdles which have been faced and overcome The most relevant product groups for eco procurement such as construction transport energy information technology furniture and food are also analysed Uniquely the book also provides calculations on the environmental benefits potentially achievable through greener purchasing Tools were developed and tested by the RELIEF researchers on the environmental assessment of products public buying power and

on evaluations of market conditions in order to provide scenarios for the application of green purchasing at a European level. The conclusions are that there is huge potential for both local and central governments to adapt their behaviour patterns and purchase in a more environmentally responsible way. For example, 18% of the EU's Kyoto Protocol commitment could be achieved if major cities in the European Union purchased green electricity. The results are complemented by new ideas on how best to foster innovation in public contractual arrangements to encourage the development of products such as super energy efficient computers and fuel cells and how the legal system may require adaptation and reform. The results presented in this book will provide an indispensable resource for municipalities, governments, researchers and business practitioners looking for answers on how public procurement can have a fundamental and manifestly positive effect on the environment.

**The Three Levels of Sustainability** Elena Cavagnaro, George H. Curiel, 2022-08-08. Understanding the complexity of sustainability is crucial for the leadership of business organizations, national governments and non governmental organizations. This second edition of the bestselling book *The Three Levels of Sustainability* uses the same interdependent three level and three dimensional framework as the first edition encompassing societal, organizational and individual levels to clearly demonstrate what sustainability means and how to implement it. This new edition incorporates important developments in reporting and measuring corporate behaviors, the impact of COVID 19 and the UN Sustainable Development Goals. More and more societies are becoming aware of their dependence on earth's resources. However, there is still a deep rooted lack of awareness of the connection between society's ambitions for economic growth, earth's limitations and unequal distribution of wealth. Prominent institutions and organizations and their leaders rely on the conformable belief that more quantity equals more quality and that more growth equals more development. Although some progress has been made since the publication of the first edition, the world is increasingly characterized by division, rising dissatisfaction and growing inequality between countries, communities and people. At the same time, it is anticipated that global warming will reach a point of no return between 2030 and 2052. The fundamental paradigm shift in the way the development process must be navigated is better served by a holistic and inclusive, multilevel and multidimensional approach meant to gradually align the critical institutional and individual factors essential to the pathway toward sustainable development. The book has been established as an excellent primer to explain the complex issues around sustainability for postgraduate and undergraduate students as well as busy professionals and those already in management and leadership positions in the private, public or non profit sectors. *Congressional Record* United States. Congress, 2017-06-12. [Miscanthus for Bioenergy Production](#) Michael B. Jones, 2019-07-19. *Miscanthus* has been enthusiastically promoted as a second generation biomass crop and this book provides a comprehensive review of this knowledge. *Miscanthus*, also known as elephant grass, is a high yielding grass crop that grows over three metres tall, resembles bamboo and produces a crop every year without the need for replanting or fertiliser application. The rapid growth, low mineral content and high biomass yield of *Miscanthus* increasingly make it a

favourite choice as a biofuel outperforming switchgrass and other alternatives There is over 20 years of research evidence to support its promotion as a second generation biomass crop The author reviews many field measurements of yields as well as the physiology of the crop and why it is so productive while at the same time requiring low inputs to grow it It also shows how as a key biofuel crop it can contribute to mitigating climate change and how uptake of the adoption of Miscanthus production can be promoted particularly in Europe and North America The book will be key reading for students taking courses in the areas of Environmental Science and Engineering Climate Change Impacts Renewable Energy and Energy Conservation It will also be of interest to researchers of second generation biomass crops and policy developers working in biofuel production and utilization Global Life Cycle Impact Assessments of Material Shifts Anders S. G.

Andrae,2009-10-13 Planet Earth is under stress from various environmental factors increasing the importance of being able to estimate the environmental costs associated with dynamic material shifts Such shifts are occurring in the electronics industry and the most famous recent example is the introduction of lead free solders Global Life Cycle Impact Assessments of Material Shifts describes the environmental implications of this shift to lead free solders and conductive adhesives using the standardized methodology of environmental life cycle assessment LCA As the product systems involved are rather small for interconnection materials it is possible using uncertainty analysis and consequential LCA to arrive at robust conclusions even in the difficult holistic field of environmental cost accounting The lead free shift has many implications such as the export of electronics waste resource consumption recycling issues and technology development From Bullets to Ballots David L. Phillips,2017-09-08 From Bullets to Ballots considers non State Muslim organizations at different stages of abandoning violence and pursuing their goals through a political process Some have successfully made the transition Others are in mid stream Some have tried but backtracked splintered or simply abandoned such efforts reverting to pathological violence Many groups could be case studies but Phillips has selected the Muslim Brotherhood of Egypt Hamas Hezbollah Kurdistan Workers Party Jammu and Kashmir Liberation Front and the Free Aceh Movement because they cover the spectrum This book deals with political strategies for moderating violent Muslim movements by engaging them in the political process In strong criticism of the Bush administration Phillips notes that the push for democracy may have increased conflict by giving violent groups the ballot which they use to gain power Focusing on non state Muslim organizations From Bullets to Ballots considers the relationship between ideology and policy Phillips discusses their origin ideology structure and leadership and examines financing activities and communications He assesses the group s commitment to elections and its acceptance of the responsibility that comes with governance From Bullets to Ballots draws on twenty years of Phillips experience working democratization and conflict prevention in the Middle East the Balkans the Caucasus and South Asia His recommendations are primarily directed to the United States because he believes the United States should be a leader in promoting democracy around the world At the same time he is convinced that the United States must tread softly or run the risk of fomenting

further violence undermining future democratic development and setting back its national interests This is a provocative informed and balanced analysis of the theories behind current policies
