Office 2003 Timesaving Techniques For Dummies Woody Leonhard, 2004-05-21. Wouldn't it be a waste to go on a spectacular exotic vacation abroad and just hang out at the hotel pool? Wouldn't it be a waste to buy a new iPod, download four favorite songs, and play them over and over? Most people with Office 2003 are wasting a lot of software power and a lot of time. They do the same routine things in the same routine ways and haven't begun to explore the capabilities of Office 2003. If you're one of them, *Office 2003 Timesaving Techniques For Dummies* gets you out of your rut and into action. It provides over 70 timesaving techniques for Word, Excel, Access, Outlook, and PowerPoint. Most of the tips work with Office 2000 and Office XP too. You'll customize Office to meet your needs and start working like a pro in no time with easy-to-use tricks, tips, and techniques for streamlining your toolbars. Word alone has dozens to choose from. Setting up Outlook, searching with folders, organizing with flags, and dealing with spam. Taking proper security measures, including using and updating an antivirus package and avoiding potentially dangerous file extensions. Editing and laying out impressive Word documents. Using keyboard shortcuts. Diving into more advanced Office skills, such as writing macros, setting up templates, and using multimedia with PowerPoint. Using Excel to build self-verifying spreadsheets. Running totals and subtotals in Access. Combining applications to print holiday greetings and run an electronic newsletter. Other concepts like object cause or agent may be present early in infancy if not innately. Processes of change occur throughout our conceptual development which prompts two key questions: Which human concepts constitute innate core knowledge? How do humans acquire new concepts and how do these concepts change in development? Core Knowledge and Conceptual Change provides a unique theoretical and empirical introduction to the study of conceptual development, documenting key advances in case studies including ground breaking science on human representations of language objects, number, events, color, space, time, beliefs and desires. Additionally, it explores how humans engage in moral reasoning and causal explanation. Are humans born good and tainted by an imperfect world or do we need to teach children to be moral? Could a concept like freedom be woven into the human soul or is it a historical invention constructed over generations of humans? Written by an eminent list of contributors renowned in child development and cognitive science, this book delves widely and deeply into the cognitive tools available at birth that are repurposed, combined and transformed to complex abstract adult conceptual representations and should be of interest to developmental psychologists, linguists, philosophers and students of cognitive science.

Computing Attitude and Affect in Text: Theory and Applications James G. Shanahan, Yan Qu, Janyce Wiebe, 2006-01-17

Human Language Technology (HLT) and Natural Language Processing (NLP) systems have typically focused on the factual aspect of content analysis. Other aspects including pragmatics, opinion and style have received much less attention. However, to achieve an adequate understanding of a text, these aspects cannot be ignored. The chapters in this book address the aspect of subjective opinion, which includes identifying different points of view, identifying different emotive dimensions and classifying text by opinion. Various conceptual models and computational methods are presented. The models explored in this book include the following: distinguishing attitudes from simple factual assertions; distinguishing between the author's reports from reports of other people's opinions; and distinguishing between explicitly and implicitly stated attitudes. In addition, many applications are described that promise to benefit from the ability to understand attitudes and affect, including indexing and retrieval of documents by opinion, automatic question answering about opinions, analysis of sentiment in the media and in discussion groups about consumer products, political issues etc., brand and reputation management, discovering and predicting consumer and voting trends, analyzing client discourse in therapy and counseling, determining relations between scientific texts by finding reasons for citations, generating more appropriate texts and making agents more believable and creating writers aids. The studies reported here are carried out on different languages such as English, French, Japanese and Portuguese. Difficult challenges remain, however. It can be argued that analyzing attitude and affect in text is an NLP complete problem.
