Extinct Animals Raina Mooncrest, AI, 2025-03-10 *Extinct Animals* explores the science behind extinction investigating the disappearance of remarkable creatures like mammoths and saber toothed cats The book delves into paleontology examining the fossil record and DNA analysis to understand how scientists piece together the lives of vanished species Learning about past mass extinction events such as those caused by asteroid impacts or volcanic eruptions offers insights into the current biodiversity crisis and the factors threatening species today A key focus is de extinction exploring the possibility of bringing back extinct animals through cloning and genetic engineering The book evaluates the ethical considerations surrounding de extinction weighing the potential ecological economic and social impacts Beginning with the principles of evolutionary biology the book progresses through major extinction events and concludes with conservation strategies to prevent future losses offering a comprehensive overview for anyone interested in biology life sciences and nature Extinct Animals Ross Piper, 2009-03-20 Everyone is familiar with the dodo and the woolly mammoth but how many people have heard of the scimitar cat and the Falkland Island fox *Extinct Animals* portrays over 60 remarkable animals that have been lost forever during the relatively recent geological past Each entry provides a concise discussion of the history of the animal how and where it lived and how it became extinct as well as the scientific discovery and analysis of the creature In addition this work

examines what led to extinction from the role of cyclical swings in the Earth's climate to the spread of humans and their activities. Many scientists believe that we are in the middle of a mass extinction right now caused by the human undermining of the earth's complex systems that support life. Understanding what caused the extinction of animals in the past may help us understand and prevent the extinction of species in the future. *Extinct Animals* examines the biology and history of some of the most interesting creatures that have ever lived including The American Terror Bird which probably became extinct over 1 million years ago who were massive predators some of which were almost 10 feet tall the Rocky Mountain Locust last seen in 1902 formed the most immense animal aggregations ever known with swarms estimated to include over 10 trillion insects the Giant Ground Sloth which was as large as an elephant and the Neandertals the first Europeans which co-existed with prehistoric Homo sapiens. *Extinct Animals* includes illustrations many created for the work that help the reader visualize the extinct creature and each entry concludes with a list of resources for those who wish to do further research. *World Wildlife Fund Guide to Extinct Species of Modern Times: Birds of the Pacific islands and North America ; Plants of the Hawaiian islands ; Fishes of North America ; Mammals of North and South Africa ; Mammals of North America and the Atlantic islands* Walton Beacham, 1997 Describes 211 species that are believed to have become extinct since 1570 and discusses their probable causes of extinction. **In Defense of the World's Most Despised Species** Ernest

Small, 2023-10-05 Some animals and plants injure or kill millions of people annually others cause trillions of dollars in property damage and loss. Such harmful species are understandably hated. However the vast majority of the planet's millions of species are disliked simply because of how they look and act. This bias is endangering numerous species that play important roles in maintaining both the natural ecosystems and the human economies of the world. *In Defense of the World's Most Despised Species* examines the psychological motivations that lead people to make judgments about the attractiveness of species noting the overwhelming importance of visual cues. It describes in considerable detail the physical and behavioral traits of species that lead us to love or hate them. Full color illustrations throughout present beautiful charming animals and plants species that seem loathsome behavior of people in relation to such divergent species and their characteristics and numerous explanatory diagrams of relevant biological and psychological phenomena. The aim of this book is to give readers insights into how we humans arrive at biased judgments and to promote the welfare of valuable albeit sometimes unlovable animals and plants that consequently suffer from discrimination. Many of the ugliest most disgusting and feared species such as vultures toads hyenas sharks spiders and even the vast majority of cockroaches in reality are some of our most valuable friends. Features Theme of the book human preferences for and against species is novel scarcely examined to date. Multidisciplinary analysis especially psychology biological conservation science and ecology as well as philosophy agriculture urban planning human health and law. Text is accessible user friendly concise and well organized making numerous complex topics comprehensible readable not only by specialists but also by students and the educated layperson. Includes over 2 000

Facing Extinction Paul Donald,Nigel Collar,Stuart Marsden,Debbie Pain,2010-08-20 An authoritative study of extinction in birds with case studies of 20 critically endangered species and the research initiatives designed to save them

Almost two hundred species of birds have become extinct in the past 400 years and a similar number today are in imminent danger of following them. The world's conservationists are leading the fight to prevent the demise of these remaining critically endangered birds with a fair degree of success. This new book examines the process and issues concerning extinction: how and why it happens and what can be done about it. Whilst man is to blame for many of the causes such as persecution and habitat loss, species have become extinct on a regular basis since life began. After several thought-provoking introductory chapters, the book showcases about 20 species on the brink of extinction from around the world and describes the work that is being undertaken to save them. Some are success stories but a few are not. This is a subject close to the hearts of all birders and ornithologists, and this book, written by a team of leading conservationists, will strike a chord in most of them.

Earth Under Fire Paul A. LaViolette, 2005-10-25 In *Earth Under Fire* Paul LaViolette investigates the connection between ancient world catastrophe myths and modern scientific evidence of a galactic destruction cycle, demonstrating how past civilizations accurately recorded the causes of these cataclysmic events, knowledge of which may be crucial for the human race to survive the next catastrophic superwave cycle.

Resurrecting Extinct Species Douglas Ian Campbell, Patrick Michael Whittle, 2017-11-25 This book is about the philosophy of de-extinction. To make an extinct species de-extinct is to resurrect it by creating new organisms of the same or similar appearance and genetics. The book describes current attempts to resurrect three species: the aurochs, woolly mammoth, and passenger pigeon.

It then investigates two major philosophical questions such projects throw up These are the Authenticity Question will the products of de extinction be authentic members of the original species and the Ethical Question is de extinction something that should be done The book surveys and critically evaluates a raft of arguments for and against the authenticity or de extinct organisms and for and against the ethical legitimacy of de extinction It concludes first that authentic de extinctions are actually possible and second that de extinction can potentially be ethically legitimate especially when deployed as part of a freeze now and resurrect later conservation strategy
