**Composition and Function of the Extracellular Matrix in the Human Body** Francesco Travascio, 2016-06-15 The extracellular matrix ECM is an ensemble of non cellular components present within all tissues and organs of the human body The ECM provides structural support for scaffolding cellular constituents and biochemical and biomechanical support for those events leading to tissue morphogenesis differentiation and homeostasis Essential components of all ECMs are water proteins and polysaccharides However their composition architecture and bioactivity greatly vary from tissue to tissue in relation to the specific role the ECM is required to assume This book overviews the role of the ECM in different tissues and organs of the human body

**Extracellular Matrix** Susan Hawkes, 2012-12-02 Extracellular Matrix contains the proceedings of the symposium The Extracellular Matrix sponsored by the Michigan Molecular Institute and held in Midland Michigan on June 28 July 2 1982 The papers explore the role played by the extracellular matrix ECM in the physiology of a cell particularly in the regulation of cellular phenotypes differentiation and proliferation The progress made in isolating and defining the chemistry and functional interactions of the ECM components is discussed along with the biology of the ECM This book is comprised of 52 chapters and begins with an introduction to the ECM with emphasis on the question of whether the malignant process can be defined in a cell culture model and in particular whether the pericellular matrix is characteristically altered in cancer The discussion then turns to the structure of the heparan sulfate proteoglycans and the molecular mechanisms responsible for the association of these

molecules with the surfaces of cultured cells Subsequent chapters focus on the chemistry of ECM components such as collagen glycosaminoglycans and adhesive glycoproteins along with their functional interactions biosynthesis turnover and degradation The final section is devoted to the diseased states of ECM This monograph should serve as a valuable reference for biochemists as well as undergraduate and graduate students of biochemistry *Extracellular Matrix Degradation* William C. Parks, Robert Mecham, 2011-04-07 Regulated turnover of extracellular matrix ECM is an important component of tissue homeostasis In recent years the enzymes that participate in and control ECM turnover have been the focus of research that touches on development tissue remodeling inflammation and disease This volume in the Biology of Extracellular Matrix series provides a review of the known classes of proteases that degrade ECM both outside and inside the cell The specific EMC proteases that are discussed include cathepsins bacterial collagenases matrix metalloproteinases meprins serine proteases and elastases The volume also discusses the domains responsible for specific biochemical characteristics of the proteases and the physical interactions that occur when the protease interacts with substrate The topics covered in this volume provide an important context for understanding the role that matrix degrading proteases play in normal tissue remodeling and in diseases such as cancer and lung disease **The Extracellular Matrix Factsbook** Shirley Ayad, Ray Boot-Handford, Martin Humphries, Karl Kadler, Adrian Shuttleworth, 1998-03-27 The Second Edition of The Extracellular Matrix FactsBook has been completely revised updated and expanded by over 50 percent It contains over 85 entries on the diverse group of macromolecules that assemble to form the extracellular matrix Entries provide information on molecular structure isolation primary structure structural and functional sites gene structure database accession numbers and key references Key Features Compiled by members of one of the foremost centers of matrix biochemistry in the world Contains over 30 new entries with all previous entries being revised and updated Includes new entries on proteinases involved in the deposition of the extracellular matrix Presents 3D ribbon diagrams in cases where the protein structure is now known

*Extracellular Matrix* W.D. DeSimone, Robert Mecham, 2013-03-15 Cells in the developing embryo depend on signals from the extracellular environment to help guide their differentiation An important mediator in this process is the extracellular matrix secreted macromolecules that interact to form large protein networks outside the cell During development the extracellular matrix serves to separate adjacent cell groups participates in establishing morphogenic gradients and through its ability to interact directly with cell surface receptors provides developmental clocks and positional information This volume discusses how the extracellular matrix influences fundamental developmental processes and how model systems can be used to elucidate ECM function The topics addressed range from how ECM influences early development as well as repair

processes in the adult that recapitulate developmental pathways      *Extracellular Matrix Assembly and Structure* Peter D. Yurchenco, 2013-10-22 The complex and critical process of extracellular matrix ECM assembly is described in this book Assembly may involve molecules interacting with molecules of the same matrix class such as in collagen or interactions between different ECM molecules such as in basement membranes The text shows how this is driven by structural information within the matrix monomer This information will be of interest to cell developmental and molecular biologists biochemists biophysicists and biomedical researchers involved in macromolecular assembly biological macromolecules and extracellular matrix Addresses assembly of most of the known classes of extracellular matrix macromolecules Discusses higher order structures produced by ECM Gives important concepts in ECM and cell matrix interactions Protein structure and protein protein interactions Development and tissue remodeling      *Cell Biology of Extracellular Matrix* E.D.

Hay, 1991-12-31 In the ten year interval since the first edition of this volume went to press our knowledge of extracellular matrix ECM function and structure has enormously increased Extracellular matrix and cell matrix interaction are now routine topics in the meetings and annual reviews sponsored by cell biology societies Research in molecular biology has so advanced the number of known matrix molecules and the topic of gene structure and regulation that we wondered how best to incorporate the new material For example we deliberated over the inclusion of chapters on molecular genetics We decided that with judicious editing we could present the recent findings in molecular biology within the same cell biology framework that was used for the first edition using three broad headings what is extracellular matrix how is it made and what does it do for cells Maintaining control over the review of literature on the subject of ECM was not always an easy task but we felt it was essential to production of a highly readable volume one compact enough to serve the student as an introduction and the investigator as a quick update on graduate the important recent discoveries The first edition of this volume enjoyed considerable success we D Hay Elizabeth vii Contents Introductory Remarks 1 Elizabeth D Hay PART I WHAT IS EXTRACELLULAR MATRIX Chapter 1 Collagen T F Linsenmayer 1 Introduction 7 2 The Collagen Molecule 8 2 1 Triple Helical Domains      *Extracellular Matrix Biology* Richard O.
