Issues for 1973 cover the entire IEEE technical literature Ecology, Sustainable Development and Accounting Seleshi Sisaye, 2015-08-11 Accounting literature has viewed sustainability in terms of social economic and environmental performances There have been concerns that the relationship between sustainability accounting and organizational performance cannot be explained unless we can deduce patterns of administrative behaviour that chronicle management practices Ecology Sustainable Development and Accounting argues that despite the broader social and economic development dimensions of sustainability and the limitations of its extension to corporate and organizational behaviour an ecological framework is capable of providing the overall societal and community chronologies that describe corporate sustainable operations Drawing examples from international development and federal government organizations this book documents the link between ecology corporate sustainable development and sustainability accounting and reporting It draws together the literature from several disciplines to elaborate the contribution of the ecological approach to sustainable development in the accounting literature This book will be of particular interest to students academics and practitioners in the areas of environmental studies ecological economics sustainable development studies and social and environmental accounting The sociological and anthropological perspectives make this book the first of its kind to apply the population ecology of sociology to both the sustainability and accounting literature *Preparing National Regulations for Water Resources Management* Stefano Burchi, Ariella D'Andrea, Food and Agriculture Organization of the United Nations, 2003-01-01 As the pressure on finite resources of freshwater resources increases government administered legislation is taking a more dominant role in water resources management and protection This manual is intended to bridge the gap between the policy and principles of the resultant primary legislation and implementation through secondary legislation It covers a variety of legislative approaches covering all aspects of water resource management from water rights conservation flood control irrigation drainage and charging It is an update of the earlier FAO Legislative Study No 52 1994 Like its predecessor it provides conceptual material for use in the preparation of national regulations for the management development use and protection of freshwater resources *TRIPS and Access to Medicines* Renata Curzel, 2020-12-10 Although ideally a patent system for pharmaceuticals should serve to incentivize research into the development of new medicines the COVID 19 pandemic has exposed the equal importance of drug access and affordability This book by focusing on the Brazilian rule which makes the grant of pharmaceutical patents dependent on the prior consent of the National Health Surveillance Agency ANVISA shows how the Brazilian model affords an example for other countries to follow in dealing with tensions between patent protection and the right to healthcare Based on an empirical study in which the author examined 147 reports issued by ANVISA as a basis for its decisions the book deals with such central questions concerning the interface of regulation and innovation in the patent system as the following compatibility between ANVISA's prior consent mechanism and the Trade Related Aspects of Intellectual Property Rights TRIPS Agreement how evergreening and trivial patents

undermine public health and access to medicines ways of correcting abuses of patent rights and controlling quality of patents and the discourse on health as a human right Along with her examination of ANVISA reports the author analyzes how Article 229 C LPI which introduced the need of ANVISA s prior consent to the patent grant of pharmaceuticals in Brazil has been interpreted in Brazilian case law Interviews with Brazilian experts are also included In its commitment to harmonizing patent rights and the right to access of affordable medicines Brazil s patent system for pharmaceuticals stands out as a workable response to the basic problem of access to medicines in the developing world By describing the successes and failures in the Brazilian policy of promoting drug access this book helps policymakers in developing and emerging countries to better explore TRIPS flexibilities when dealing with similar problems and provides practitioners in the law of the World Trade Organization patent law competition law and health law with a guide to how a more equitable pharmaceutical patenting system could work in practice

Calcium in Human Health Connie M. Weaver,Robert P. Heaney,2007-11-10 The Nutrition and

Health Series of books have had great success because each volume has the consistent overriding mission of providing health professionals with texts that are essential because each includes 1 a synthesis of the state of the science 2 timely in depth reviews by the leading researchers in their respective fields 3 extensive to date fully annotated reference lists 4 a detailed index 5 relevant tables and figures 6 identification of paradigm shifts and the consequences 7 virtually no overlap of information between chapters but targeted interchapter referrals 8 suggestions of areas for future research and 9 balanced data driven answers to patient health professional questions that are based on the totality of evidence rather than the findings of any single study The series volumes are not the outcome of a symposium Rather each editor has the potential to examine a chosen area with a broad perspective both in subject matter as well as in the choice of chapter authors The international perspective especially with regard to public health initiatives is emphasized where appropriate The editors whose trainings are both research and practice oriented have the opportunity to develop a primary objective for their book define the scope and focus and then invite the leading authorities from around the world to be part of their initiative The authors are encouraged to provide an overview of the field discuss their own research and relate the research findings to potential human health consequences

Intelligent Systems, Business, and Innovation Research Rim El Khoury, Nohade Nasrallah, 2024-01-25

Intelligent systems research is a multidisciplinary field that focuses on the development of systems that can perceive reason and act autonomously This can include areas such as machine learning artificial intelligence natural language processing and robotics The goal of intelligent systems research is to develop systems that can understand learn from and adapt to their environment to perform tasks that would typically require human intelligence Business and innovation research is an interdisciplinary field that examines how organizations can create develop and implement new ideas products and services This can include areas such as organizational behaviour strategic management and marketing The goal of business and innovation research is to understand how organizations can foster an environment that encourages creativity and innovation and how they can develop and implement new ideas in a way that leads to success Intelligent Systems Business and Innovation Research is a research area that brings together these two fields to study the use of intelligent systems and technologies in the business context to drive innovation improve operational efficiency and effectiveness of the organization The book aims to understand how intelligent systems can be used in business applications how to design and implement them how to manage the associated challenges and how to leverage them to foster innovation create new business models and gain competitive advantage It offers guidance on how to navigate potential conflicts and challenges that may arise during multidisciplinary research in areas such as Industry 4.0 Internet of Things modern machine learning software agent applications and data science The book focuses on the various fields in which intelligent systems play a critical role in enabling the development of advanced technologies that can perform tasks that would typically require human intelligence For example in smart control systems intelligent algorithms can be used to optimize the performance of

machines and devices while in cyber security they can be used to protect networks and data from cyber attacks In bioinformatics intelligent systems can be used to analyse large amounts of biological data while in virtual reality and robotics they can be used to create realistic and responsive simulations and automatons Additionally the book also highlights the rapidly advancing theoretical foundations of fuzzy sets mathematical logic and non classical logic These are important theoretical frameworks for the development of intelligent systems as they provide the foundation for the representation and manipulation of uncertainty complexity and imprecision These theoretical foundations are essential in the development of intelligent systems that can make decisions and perform tasks in uncertain complex and dynamic environments The No-Nonsense Guide to Women's Rights Nikki van der Gaag,2008-11-01 Has the battle for women s rights been won Not when women still make up 70 percent of the world s poor This guide examines the advances that have been made and looks beneath the surface to find out what the reality is for women all around the world It shows how in this post feminist age women s rights are still very much an issue Nikki van der Gaag is a freelance writer editor and evaluator on development issues Prior to this she was editorial director at the Panos Institute and co editor of the New Internationalist magazine

Smart Adaptive Systems on Silicon Maurizio Valle,2013-06-05 Intelligent smart systems have become common practice in many engineering applications On the other hand current low cost standard CMOS technology and future foreseeable developments makes available enormous potentialities The next breakthrough will be the design and development of smart adaptive systems on silicon i e very power and highly size efficient complete systems i e sensing computing and actuating actions with intelligence on board on a single silicon die Smart adaptive systems on silicon will be able to adapt autonomously to the changing environment and will be able to implement intelligent behaviour and both perceptual and cognitive tasks At last they will communicate through wireless channels they will be battery supplied or remote powered via inductive coupling and they will be ubiquitous in our every day life Although many books deal with research and engineering topics i e algorithms technology implementations etc few of them try to bridge the gap between them and to address the issues related to feasibility reliability and applications Smart Adaptive Systems on Silicon though not exhaustive tries to fill this gap and to give answers mainly to the feasibility and reliability issues Smart Adaptive Systems on Silicon mainly focuses on the analog and mixed mode implementation on silicon because this approach is amenable of achieving impressive energy and size efficiency Moreover analog systems can be more easily interfaced with sensing and actuating devices Index to Publications of the United States Department of Agriculture, 1901-1925 United States.
