From Depths Unknown:

An Annotated Checklist of the Marine Macroinvertebrates of Alaska David Thomas Drumm, Katherine P.

Maslenikov, Robert Van Syoc, James Wilder Orr, Robert Russell Lauth, Duane E. Stevenson, Theodore W. Pietsch, 2016 A current and comprehensive species list of marine invertebrates of Alaska is essential for effective management of living marine resources sustainable fisheries conservation of vulnerable ecosystems and advancement of our knowledge of biodiversity and ecosystem function Furthermore the most current checklist available to resource managers and scientists is quite dated and limited in that it only includes the marine invertebrates of the southern coast of Alaska to California Since that checklist was published many new species have been described many range extensions have been discovered and considerable changes in higher level systematics have been made The checklist that we have compiled lists 3708 species and presents for each species the currently accepted scientific name and its significant synonyms common names type localities geographic and depth distributions a general statement of abundance in Alaska when known e g rare uncommon common abundant and general remarks It includes species recorded in the marine waters of Alaska from the intertidal zone continental shelf and upper continental slope to abyssal depths from the Beaufort Sea at the Arctic border with Yukon Canada the eastern Chukchi Sea the eastern Bering Sea the Aleutian Islands to the western border with Russia and the Gulf of Alaska to Dixon Entrance at the southern border with British Columbia Sound and reliable taxonomic identifications are necessary to monitor and predict changes in the distribution and abundance of marine species The current status and future direction of the study of Alaskan marine invertebrate biodiversity are briefly discussed Diversity of Coral-Associated Fauna Simone

Montano, 2020-11-03 Coral reefs are acknowledged for the beauty of their organisms which has made this natural ecosystem one of the most appreciated on Earth It is believed to be the richest in terms of species diversity and species interactions at least in theory since there is yet much documentation work to be done Indeed the paradox is that of the estimated one million species living in this ecosystem globally only 10% of them have been described To date most of the coral reef studies have focused on the most peculiar and fabulous groups such as corals and fishes although most of the diversity is usually represented by small colored camouflaged hidden and crypto organisms from all kingdoms of life The mystery of their diversity ecology biology and importance in the functioning of coral reefs motivate many scientists to dive all around the world in order to discover name and appreciate such a fascinating but unfortunately overlooked component of nature This book is a very nice illustration of the charm of the coral associated fauna **Carmina Sacerdotis** John Henry Dooley, 1899
