**Natural Time Analysis: The New View of Time, Part II** Panayiotis Varotsos, Nicholas Sarlis, Efthimios

Skordas, 2023-06-17 This monograph contains the advances achieved based on the content of our previous monograph published in 2011. In other words, the present monograph can be considered as Part II containing new results accomplished in the last decade. These were published in several reputed international journals based on the concept of natural time discussed in detail in our earlier monograph. The analysis in natural time enables the study of the dynamical evolution of a complex system and identifies when the system enters a critical stage. A wide range of applications are discussed, such as the cases of environmental extreme events, disasters, and sudden cardiac death. More light is shed on changes of natural time features before major earthquakes like the 2011 M9 Tohoku earthquake in Japan and the 2017 M8.2 Chiapas earthquake in Mexico. Hence, natural time analysis plays a key role in predicting impending catastrophic events in general, with a primary audience of Researchers and Academics in Physics, Earth Sciences, and Medicine. *Memory and Covenant* Barat

Ellman, 2013-10-01 *Memory and Covenant* applies new insights into the meaning and function of social memory to analyze the two major religions of the Pentateuch, D and P, and their relationship to one another. Ellman shows that for the Deuteronomistic tradition, memory is an epistemological and pedagogical means for keeping Israel faithful to its God and God's commandments, even when Israelites are far from the temple and its worship. The pre-exilic priestly tradition, however, understands that the covenant depends on God's memory, which must be aroused by the sensory stimuli of the temple cult.
