From Cardinals to Chaos Stanislaw M. Ulam, 1987 *From Cardinals to Chaos* N. G. Cooper, Roger Eckhardt, Nancy Shera, 1989-02-24 First published 1987 as Los Alamos science special issue A compendium of biographical and autobiographical notes essays and scientific articles reflecting on Ulam s legacy of interdisciplinary approaches to problems in math physics and biology and previously unpublished miscellanea conversations a satirical play The whole serves to celebrate the personality and contributions of the dynamic mathematician Annotation copyrighted by Book News Inc Portland OR

Nonlinear Dynamics Rowena Ball, Nail N. Akhmediev, 2003 This book is an inspirational introduction to modern research directions and scholarship in nonlinear dynamics and will also be a valuable reference for researchers in the field With the scholarly level aimed at the beginning graduate student the book will have broad appeal to those with an undergraduate background in mathematical or physical sciences In addition to pedagogical and new material each chapter reviews the current state of the area and discusses classic and open problems in engaging surprisingly non technical ways The contributors are Brian Davies bifurcations in maps Nalini Joshi integrable systems and asymptotics Alan Newell wave turbulence and pattern formation Mark Ablowitz nonlinear waves Carl Weiss spatial solitons Cathy Holmes Hamiltonian systems Tony Roberts dissipative fluid mechanics Jorgen Frederiksen two dimensional turbulence and Mike Lieberman Fermi acceleration

Applied Number Theory Harald Niederreiter, Arne Winterhof, 2015-09-01 This textbook effectively builds a bridge from basic number theory to recent advances in applied number theory It presents the first unified account of the four major areas of application where number theory plays a fundamental role namely cryptography coding theory quasi Monte Carlo methods and pseudorandom number generation allowing the authors to delineate the manifold links and interrelations between these areas Number theory which Carl Friedrich Gauss famously dubbed the queen of mathematics has always been considered a very beautiful field of mathematics producing lovely results and elegant proofs While only very few real life applications were known in the past today number theory can be found in everyday life in supermarket bar code scanners in our cars GPS systems in online banking etc Starting with a brief introductory course on number theory in Chapter 1 which makes the book more accessible for undergraduates the authors describe the four main application areas in Chapters 2 5 and offer a glimpse of advanced results that are presented without proofs and require more advanced mathematical skills In the last chapter they review several further applications of number theory ranging from check digit systems to quantum computation and the organization of raster graphics memory Upper level undergraduates graduates and researchers in the field of number theory will find this book to be a valuable resource

Mathematical Support for Molecular Biology Martin Farach-Colton, 1999 Contains papers related to the 1994 98 DIMACS Special Year in Mathematical Support for Biology which involved a series of tutorials workshops and lectures Papers reflect diverse work at the interface between the mathematical sciences and molecular biology Topics include new uses for uniform lifted alignments sequence alignment and phylogeny

Nonlinearity, Complexity and Randomness in Economics Stefano Zambelli, Donald A. R. George, 2012-01-17 Nonlinearity Complexity and Randomness in Economics presents a variety of papers by leading economists scientists and philosophers who focus on different aspects of nonlinearity complexity and randomness and their implications for economics A theme of the book is that economics should be based on algorithmic computable mathematical foundations Features an interdisciplinary collection of papers by economists scientists and philosophers Presents new approaches to macroeconomic modelling agent based modelling financial markets and emergent complexity Reveals how economics today must be based on algorithmic computable mathematical foundations

Outsider Scientists Oren Harman, Michael R. Dietrich, 2013-12-11 Outsider Scientists describes the transformative role played by outsiders in the growth of the modern life sciences Biology which occupies a special place between the exact and human sciences has historically attracted many thinkers whose primary training was in other fields mathematics physics chemistry linguistics philosophy history anthropology engineering and even literature These outsiders brought with them ideas and tools that were foreign to biology but which when applied to biological problems helped to bring about dramatic and often surprising breakthroughs This volume brings together eighteen thought provoking biographical essays of some of the most remarkable outsiders of the modern era each written by an authority in the respective field From Noam Chomsky using linguistics to answer questions about brain architecture to Erwin Schrödinger contemplating DNA as a physicist would to Drew Endy tinkering with Biobricks to create new forms of synthetic life the outsiders featured here make clear just how much there is to gain from disrespecting conventional boundaries Innovation it turns out often relies on importing new ideas from other fields Without its outsiders modern biology would hardly be recognizable

Monte Carlo N-Particle Simulations for Nuclear Detection and Safeguards John S. Hendricks, Martyn T. Swinhoe, Andrea Favalli, 2022-09-27 This open access book is a pedagogical examples based guide to using the Monte Carlo N Particle MCNP code for nuclear safeguards and non proliferation applications The MCNP code general purpose software for particle transport simulations is widely used in the field of nuclear safeguards and non proliferation for numerous applications including detector design and calibration and the study of scenarios such as measurement of fresh and spent fuel This book fills a gap in the existing MCNP software literature by teaching MCNP software usage through detailed examples that were selected based on both student feedback and the real world experience of the nuclear safeguards group at Los Alamos National Laboratory MCNP input and output files are explained and the technical details used in MCNP input file preparation are linked to the MCNP code manual Benefiting from the authors decades of experience in MCNP simulation this book is essential reading for students academic researchers and practitioners whose work in nuclear physics or nuclear engineering is related to non proliferation or nuclear safeguards Each chapter

Wuytack, 2012-12-02 Numerical analysis has witnessed many significant developments in the 20th century This book brings together 16 papers dealing with historical developments survey papers and papers on recent trends in selected areas of numerical analysis such as approximation and interpolation solution of linear systems and eigenvalue problems iterative methods quadrature rules solution of ordinary partial and integral equations The papers are reprinted from the 7 volume project of the Journal of Computational and Applied Mathematics on homepage sac cam na2000 index html Numerical Analysis 2000 An introductory survey paper deals with the history of the first courses on numerical analysis in several countries and with the landmarks in the development of important algorithms and concepts in the field Multifaceted Uncertainty Quantification Isaac Elishakoff, 2024-09-23 The book exposes three alternative and competing approaches to uncertainty analysis in engineering It is composed of some essays on various sub topics like random vibrations probabilistic reliability fuzzy sets based analysis unknown but bounded variables stochastic linearization possible difficulties with stochastic analysis of structures

Computer Network Simulation Using NS2 Ajit Kumar Nayak, Satyananda Champati Rai, Rajib Mall, 2016-08-19 Computer Network Simulations Using NS2 provides a solid foundation of computer networking knowledge and skills covering everything from simple operating system commands to the analysis of complex network performance metrics The book begins with a discussion of the evolution of data communication techniques and the fundamental issues associated with performance evaluation After presenting a preliminary overview of simulation and other performance evaluation techniques the authors Describe a number of computer network protocols and TCP IP and OSI models highlighting the networking devices used Explain a socket and its use in network programming fostering the development of network applications using C and socket API Introduce the NS2 network simulator exhibiting its internal architecture constituent software packages and installation in different operating systems Delve into simulation using NS2 elaborating on the use of Tcl and OTcl scripts as well as AWK scripting and plotting with Gnuplot Show how to simulate wired and wireless network protocols step by step layer by layer Explore the idea of simulating very large networks identifying the challenges associated with measuring and graphing the various network parameters Include nearly 90 example programs scripts and outputs along with several exercises requiring application of the theory and programming Computer Network Simulations Using NS2 emphasizes the implementation and simulation of real world computer network protocols affording readers with valuable opportunities for hands on practice while instilling a deeper understanding of how computer network protocols work Computable, Constructive & Behavioural Economic Dynamics Stefano Zambelli, 2010-02-25 The book contains thirty original articles dealing with important aspects of theoretical as well as applied economic theory While the principal focus is on the computational and algorithmic nature of economic dynamics individual as well as collective decision process and rational behavior some contributions emphasize also

the importance of classical recursion theory and constructive mathematics for dynamical systems business cycles theories growth theories and others are in the area of history of thought methodology and behavioural economics The contributors range from Nobel Laureates to the promising new generation of innovative thinkers This volume is also a Festschrift in honour of Professor Kumaraswamy Vela Velupillai the founder of Computable Economics a growing field of research where important results stemming from classical recursion theory and constructive mathematics are applied to economic theory The aim and hope is to provide new tools for economic modelling This book will be of particular appeal to postgraduate students and scholars in one or more of the following fields computable economics business cycles macroeconomics growth theories methodology behavioural economics financial economics experimental and agent based economics It might be also of importance to those interested on the general theme of algorithmic foundations for social sciences **Kurt Gödel:**

Collected Works: Volume IV Kurt Gödel, Stanford University of Mathematics, 2014-01-09 Kurt Gödel 1906-1978 was the most outstanding logician of the twentieth century famous for his hallmark works on the completeness of logic the incompleteness of number theory and the consistency of the axiom of choice and the continuum hypothesis He is also noted for his work on constructivity the decision problem and the foundations of computability theory as well as for the strong individuality of his writings on the philosophy of mathematics He is less well known for his discovery of unusual cosmological models for Einstein's equations in theory permitting time travel into the past The Collected Works is a landmark resource that draws together a lifetime of creative thought and accomplishment The first two volumes were devoted to Gödel's publications in full both in original and translation and the third volume featured a wide selection of unpublished articles and lecture texts found in Gödel's Nachlass These long awaited final two volumes contain Gödel's correspondence of logical philosophical and scientific interest Volume IV covers A to G with H to Z in volume V in addition Volume V contains a full inventory of Gödel's Nachlass All volumes include introductory notes that provide extensive explanatory and historical commentary on each body of work English translations of material originally written in German some transcribed from the Gabelsberger shorthand and a complete bibliography of all works cited Kurt Gödel Collected Works is designed to be useful and accessible to as wide an audience as possible without sacrificing scientific or historical accuracy The only comprehensive edition of Gödel's work available it will be an essential part of the working library of professionals and students in logic mathematics philosophy history of science and computer science and all others who wish to be acquainted with one of the great minds of the twentieth century Irreducibility and Computational Equivalence Hector Zenil, 2012-12-25 It is clear that computation is playing an increasingly prominent role in the development of mathematics as well as in the natural and social sciences The work of Stephen Wolfram over the last several decades has been a salient part in this phenomenon helping founding the field of Complex Systems with many of his constructs and ideas incorporated in his book A New Kind of Science ANKS becoming part of the scientific discourse and general academic knowledge from the now established

Elementary Cellular Automata to the unconventional concept of mining the Computational Universe from today's widespread Wolfram's Behavioural Classification to his principles of Irreducibility and Computational Equivalence This volume with a Foreword by Gregory Chaitin and an Afterword by Cris Calude covers these and other topics related to or motivated by Wolfram's seminal ideas reporting on research undertaken in the decade following the publication of Wolfram's NKS book Featuring 39 authors its 23 contributions are organized into seven parts Mechanisms in Programs Nature Systems Based on Numbers Simple Programs Social and Biological Systems Technology Fundamental Physics The Behavior of Systems the Notion of Computation Irreducibility Computational Equivalence Reflections and Philosophical Implications Selected Papers II Peter D Lax, 2005-05-20 A renowned mathematician who considers himself both applied and theoretical in his approach Peter Lax has spent most of his professional career at NYU making significant contributions to both mathematics and computing He has written several important published works and has received numerous honors including the National Medal of Science the Lester R Ford Award the Chauvenet Prize the Semmelweis Medal the Wiener Prize and the Wolf Prize Several students he has mentored have become leaders in their fields Two volumes span the years from 1952 up until 1999 and cover many varying topics from functional analysis partial differential equations and numerical methods to conservation laws integrable systems and scattering theory After each paper or collection of papers is a commentary placing the paper in context and where relevant discussing more recent developments Many of the papers in these volumes have become classics and should be read by any serious student of these topics In terms of insight depth and breadth Lax has few equals The reader of this selecta will quickly appreciate his brilliance as well as his masterful touch Having this collection of papers in one place allows one to follow the evolution of his ideas and mathematical interests and to appreciate how many of these papers initiated topics that developed lives of their own *The Universal Book of Mathematics* David Darling, 2008-04-21 Praise for David Darling The Universal Book of Astronomy A first rate resource for readers and students of popular astronomy and general science Highly recommended Library Journal A comprehensive survey and a rare treat Focus The Complete Book of Spaceflight Darling's content and presentation will have any reader moving from entry to entry The Observatory magazine Life Everywhere This remarkable book exemplifies the best of today's popular science writing it is lucid informative and thoroughly enjoyable Science Books Films An enthralling introduction to the new science of astrobiology Lynn Margulis Equations of Eternity One of the clearest and most eloquent expositions of the quantum conundrum and its philosophical and metaphysical implications that I have read recently The New York Times Deep Time A wonderful book The perfect overview of the universe Larry Niven *Computational Physics* Franz J. Vesely, 2013-04-18 Author Franz J Vesely offers students an introductory text on computational physics providing them with the important basic numerical computational techniques His unique text sets itself apart from others by focusing on specific problems of computational physics The author also provides a selection of modern fields of research Students will benefit from the

appendixes which offer a short description of some properties of computing and machines and outline the technique of Fast Fourier Transformation

Computable, Constructive and Behavioural Economic Dynamics Stefano Zambelli, 2010-02-25 The book contains thirty original articles dealing with important aspects of theoretical as well as applied economic theory While the principal focus is on the computational and algorithmic nature of economic dynamics individual as well as collective decision process and rational behavior some contributions emphasize also the importance of classical recursion theory and constructive mathematics for dynamical systems business cycles theories growth theories and others are in the area of history of thought methodology and behavioural economics The contributors range from Nobel Laureates to the promising new generation of innovative thinkers This volume is also a Festschrift in honour of Professor Kumaraswamy Vela Velupillai the founder of Computable Economics a growing field of research where important results stemming from classical recursion theory and constructive mathematics are applied to economic theory The aim and hope is to provide new tools for economic modelling This book will be of particular appeal to postgraduate students and scholars in one or more of the following fields computable economics business cycles macroeconomics growth theories methodology behavioural economics financial economics experimental and agent based economics It might be also of importance to those interested on the general theme of algorithmic foundations for social sciences

Monte Carlo George Fishman, 2013-03-09 This book provides an introduction to the Monte Carlo method suitable for a one or two semester course for graduate and advanced undergraduate students in the mathematical and engineering sciences It also can serve as a reference for the professional analyst In the past my inability to provide students with a single source book on this topic for class and for later professional reference had left me repeatedly frustrated and eventually motivated me to write this book In addition to focused accounts of major topics the book has two unifying themes One concerns the effective use of information and the other concerns error control and reduction The book describes how to incorporate information about a problem into a sampling plan in a way that reduces the cost of estimating its solution to within a specified error bound Although exploiting special structures to reduce cost long has been a hallmark of the Monte Carlo method the propensity of users of the method to discard useful information because it does not fit traditional textbook models repeatedly has impressed me The present account aims at reducing the impediments to integrating this information Errors both statistical and computational abound in every Monte Carlo sampling experiment and a considerable methodology exists for controlling them

Cellular Automata: Prospects In Astrophysical Applications - Proceedings Of The Workshop On Cellular Automata Models For Astrophysical Phenomena A Lejeune, J M Perdang, 1993-11-23 This book provides a survey of the basic ideas of the cellular automaton CA modelling environment emphasising the relevance of this framework to astrophysical applications It contains introductory level lectures on lattice gases and on CA turbulence diffusion reaction processes percolation and self organised criticality Further it gives a variety of astrophysical applications including stellar oscillations galactic evolution distribution of luminous matter in the
