Haeffele-Balch, Laura E. Grube, 2016-02-10 Rebounding after disasters like tsunamis hurricanes earthquakes and floods can be daunting Communities must have residents who can not only gain access to the resources that they need to rebuild but who can also overcome the collective action problem that characterizes post disaster relief efforts Community Revival in the Wake of Disaster argues that entrepreneurs conceived broadly as individuals who recognize and act on opportunities to promote social change fill this critical role Using examples of recovery efforts following Hurricane Katrina in New Orleans Louisiana and Hurricane Sandy on the Rockaway Peninsula in New York the authors demonstrate how entrepreneurs promote community recovery by providing necessary goods and services restoring and replacing disrupted social networks and signaling that community rebound is likely and in fact underway They argue that creating space for entrepreneurs to act after disasters is essential for promoting recovery and fostering resilient communities *Human Problems in Major Disasters* National Institute of Mental Health (U.S.). Division of Education and Service Systems Liaison. Emergency Services Branch, 1987 **Disaster Management Through Panchayati Raj** Kamal Taori, 2005 With reference to India **Living Conditions, Disasters and Development** Frederick L. Bates, Walter Gillis Peacock, 2008 Because most environmental problems result from human intervention in the ecosystem ecological research in the social sciences is now joining research in the biological and physical sciences as a means of addressing long range problems Within this type of social science research no problem is more important than the investigation of disasters To assess the impact of sudden cataclysms on the living conditions of families or communities scientists need a set of pretested standardized measures that can be used cross culturally Once a disaster strikes investigators are often faced with insufficient tools for assessing its impact and evaluating whether aid programs have enabled households to recover or improve their conditions In this book the authors introduce and describe a measure the Domestic Assets Scale that they have developed to deal with these research problems They first present theoretical arguments that relate living conditions to the concepts of disaster and development they then show how the measure was constructed with the use of data collected in sample communities in Italy Mexico Peru Turkey the United States and Yugoslavia Throughout their discussions they emphasize the practical application of their theoretical arguments and address the research problems and constraints faced by investigators using this procedure Finally they assess the validity and reliability of the Domestic Assets Scale and show how it can be used to measure long term change especially in the wake of catastrophic events **Natural Disasters** David Alexander, 2018-10-24 As a well balanced and fully illustrated introductory text this book provides a comprehensive overview of the physical technological and social components of natural disaster The main disaster producing agents are reviewed systematically in terms of geophysical processes and effects monitoring mitigation and warning The relationship between disasters and society is examined with respect to a wide variety of themes including damage assessment and prevention hazard mapping emergency preparedness the provision of shelter and the nature of reconstruction Medical emergencies and the epidemiology of disasters are described and refugee

management and aid to the Third World are discussed A chapter is devoted to the sociology psychology economics and history of disasters In many parts of the world the toll of death injury damage and deprivation caused by natural disasters is becoming increasingly serious Major earthquakes volcanic eruptions droughts floods and other similar catastrophes are often followed by large relief operations characterized by substantial involvement of the international community The years 1990 2000 have therefore been designated by the United Nations as the International Decade for Natural Disaster Reduction The book goes beyond mere description and elevates the field of natural catastrophes to a serious academic level The author's insights and perspectives are also informed by his practical experience of being a disaster victim and survivor and hence the unique perspective of a participant observer Only by surmounting the boundaries between disciplines can natural catastrophe be understood and mitigation efforts made effective Thus this book is perhaps the first completely interdisciplinary fully comprehensive survey of natural hazards and disasters It has a clear theoretical basis and it recognizes the importance of six fundamental approaches to the field which it blends carefully in the text in order to avoid the partiality of previous works It covers the earth and social sciences as well as engineering architecture and development studies This breadth is made possible by virtue of a strong emphasis on simple principles of the interaction of geophysical agents with human vulnerability and response All students of environmental sciences studies and geography should find this book useful It is an introductory text which treats this dramatic subject area as something demanding serious academic treatment and not just as an assemblage of horror stories This book is intended for undergraduate students in geography and environmental studies sciences The book should also appeal to any professional or researcher concerned with man environment relations whether in social science or natural science or engineering
