

Example

Differentiate $f(x) = x^2$ from first principles

$$f'(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$$

$$= \lim_{h \rightarrow 0} \frac{((x+h)^2) - (x^2)}{h}$$

Substitute for $f(x)$
and $f(x+h)$

$$= \lim_{h \rightarrow 0} \frac{(x^2 + 2xh + h^2) - (x^2)}{h}$$

Multiply the brackets

$$= \lim_{h \rightarrow 0} \frac{2xh + h^2}{h}$$

Simplify

$$= \lim_{h \rightarrow 0} 2x + h$$

Divide by h

$$= 2x$$

Apply the limit,
i.e. make $h = 0$

Initiation and Control of Gait from First Principles: A Mathematically Animated Model of the Foot Craig Nevin, 2010-05-21

This thesis examines the anatomical locations of the dynamic pressures that create the first five footprints when a standing person starts to walk. It is hypothesized that the primary activity starts with the dorsiflexion or lifting of the great toe. Consequently, the metatarsophalangeal region of the forefoot was studied from three directions. Viewed side on, the great toe free body is found from a detailed post hoc analysis of previous kinematic data obtained from cadavers to operate as a cam. The cam model also follows closely from Aristotle's ancient description of the hinged instrument of animate motion. Viewed in coronal cross section, the first metatarsal torsion strength was estimated in 13 humans, 1 gorilla, 3 chimpanzees, 1 orangutan, and 1 baboon set of dry bone specimens of the hands and feet. The first metatarsal bone alone contributes 43% of the total strength of all the metatarsal bones. A result unique amongst the hominids and apes studied. Viewed in horizontal plan, the dynamic components and principle axes of the footprints of 54 barefoot humans (32 male, 22 female, age 32.11 years) were studied whilst standing on a 0.5m pressure plate and then immediately when walking over a 2m plate. 4 sensors per cm² sampled at 100Hz. Two footprints were obtained during the initial stance posture and the first three footprints of the initial walk. Three new principles of animate motion were deduced from the divergent results obtained from complete and dissected cadavers. The metatarsal cam from the sagittal side view, the ground reaction torque from the frontal coronal view, and the amputation artifact. The philosophy of experimenting on inanimate cadavers rather than living subjects was intensively researched. Instead of assuming that gait is a uniform or regular motion as is usual, the foot was analyzed rather as if it was a beam attached to the ground. Engineering equations were used to determine the flexural properties of the foot every 0.01 seconds, including the principle axes, radius of gyration, and the local shear stresses on the sensors spaced 5.7mm apart. A sequence of these impressions creates a mathematically animated model of the footprint. The local force under the foot was normalized against both the total force and contact duration. The forces under the foot were each divided between 10 anatomical regions using individual masks for each foot strike. Producing a 54 subject database from which the normal behavior of the foot could be quantified. The group showed a surprisingly low right foot step-off dominance of only 54%. The combination of the radius of gyration and impulse in particular produces a succinct but powerful summary of the footprint during dynamic activity. The initial angle and magnitudes of the loads that are applied and removed demonstrates that the body first rocks onto the heels after the instruction to walk is given. The feet simultaneously invert and their arches rise off the ground as anticipated. The principle axes were then animated in a mathematical four-dimensional model. The horizontal radius of gyration is on average 5 cm during heel strike but increases to 20 cm as the forefoot comes into contact with the ground, finally rising to 25 cm at toe-off. Significantly, the applied load during the forefoot loading phase is more widely distributed than the load being removed. A new and unanticipated result that is believed to be a special characteristic of the

animate foot The standard deviation of the force under the great toe is the first mechanical parameter to converge in the 54 subjects conclusively verifying the hypothesis that the great toe both initiates and controls gait **First Principles** Herbert Spencer,1895 *First Principles* Herbert Spencer,1867 **The First Principles of Knowledge** John Rickaby,1901

Jonathan Greig,2020-11-04 In The First Principle Jonathan Greig examines the philosophical theology of the two Neoplatonists Proclus and Damascius 5th 6th centuries A D on the One as the first cause Both philosophers address a tension in the Neoplatonic tradition namely that the One was seen as absolutely transcendent yet it was also seen as intimately related to other things as the source of their unity and being Proclus solution is to posit intermediate causes after the One while Damascius posits a distinct principle the Ineffable above the One This book provides a new thorough study of the theories of causation that lead each to their respective position and reveals crucial insights involved in a rigorous negative theology employed in metaphysics *Case-Based Reasoning Research and Development* Klaus-Dieter Althoff,Ralph

Thomas Reid on Freedom and Morality William L. Rowe, 1991 In this succinct and well written book one of our most eminent philosophers provides a fresh reading of the view of freedom and morality developed by Thomas Reid 1710-1796 Although contemporary theorists have written extensively about the Scottish philosopher's contributions to the theory of knowledge this is the first book length study of his contributions to the controversy over freedom and necessity William L. Rowe argues that Reid developed a subtle systematic theory of moral freedom based on the idea of the human being as a free and morally responsible agent He carefully reconstructs the theory and explores the intellectual background to Reid's views in the work of John Locke Samuel Clarke and Anthony Collins Rowe develops a novel account of Reid's conception of free action and relates it to contemporary arguments that moral responsibility for an action implies the power to have done otherwise Distilling from Reid's work a viable version of the agency theory of freedom and responsibility he suggests how Reid's theory can be defended against the major objections both historical and contemporary that have been advanced against it Blending to good effect historical and philosophical analysis Thomas Reid on Freedom and Morality should interest philosophers political theorists and intellectual historians

Reid-Arg Philosophers Keith Lehrer, 2010-07-13 This book is available either individually or as part of the specially priced Arguments of the Philosophers Collection The purpose of this series is to provide a contemporary assessment and history of the entire course of philosophical thought Each book constitutes a detailed critical introduction to the work of a philosopher of major influence and significance The author's

reason for writing this book is that the philosophy of Thomas Reid is widely unread while the combination of soundness and creativity of his work is unexcelled *Angelic Wisdom Concerning the Divine Providence* Emanuel Swedenborg,1862
