Science of etymology** Benjamin Woodbridge Dwight, 1859      *Discovering Water* David Philip Miller, 2017-05-15 The water controversy concerns one of the central discoveries of modern science that water is not an element but rather a compound The allocation of priority in this discovery was contentious in the 1780s and has occupied a number of 20th century historians The matter is tied up with the larger issues of the so called chemical revolution of the late eighteenth century A case can be made for James Watt or Henry Cavendish or Antoine Lavoisier as having priority in the discovery depending upon precisely what the discovery is taken to consist of however neither the protagonists themselves in the 1780s nor modern historians qualify as those most fervently interested in the affair In fact the controversy attracted most attention in early Victorian Britain some fifty to seventy years after the actual work of Watt Cavendish and Lavoisier The central historical question to which the book addresses itself is why the priority claims of long dead natural philosophers so preoccupied a wide range of people in the later period The answer to the question lies in understanding the enormous symbolic importance of James Watt and Henry Cavendish in nineteenth century science and society More than credit for a particular discovery was at stake here When we examine the various agenda of the participants in the Victorian phase of the water controversy we find it driven by filial loyalty and nationalism but also most importantly by ideological struggles about the nature of science and its relation to technological invention and innovation in British society At a more general theoretical level this study also provides important insights into conceptions of the nature of discovery as they are debated by modern historians philosophers and sociologists of science
