From Hand To Mouth The Origins Of Language:

From Hand to Mouth Michael C. Corballis, 2002 A groundbreaking theory of how language arose from primate gestures It is often said that speech is what distinguishes us from other animals But are we all talk What if language was bequeathed to us not by word of mouth but as a hand me down The notion that language evolved not from animal cries but from manual and facial gestures that for most of human history actions have spoken louder than words has been around since Condillac But never before has anyone developed a full fledged theory of how why and with what effects language evolved from a gestural system to the spoken word Marshaling far flung evidence from anthropology animal behavior neurology molecular biology anatomy linguistics and evolutionary psychology Michael Corballis makes the case that language developed with the emergence of Homo sapiens from primate gestures to a true signed language complete with grammar and syntax and at best punctuated with grunts and other vocalizations While vocal utterance played an increasingly important complementary role autonomous speech did not appear until about 50 000 years ago much later than generally believed Bringing in significant new evidence to bolster what has been a minority view Corballis goes beyond earlier supporters of a gestural theory by suggesting why speech eventually but not completely supplanted gesture He then uses this milestone to account for the artistic explosion and demographic triumph of the particular group of Homo sapiens from whom we are descended And he asserts that speech like written language was a cultural invention and not a biological fait accompli Writing with wit and eloquence Corballis makes nimble reference to literature mythology natural history sports and contemporary politics as he explains in fascinating detail what we now know about such varied subjects as early hominid evolution modern signed languages and the causes of left handedness *From Hand to Mouth* will have scholars and laymen alike talking and sometimes gesturing for years to come

milestone to account for the artistic explosion and demographic triumph of the particular group of Homo sapiens from whom we are descended And he asserts that speech like written language was a cultural invention and not a biological fait accompli Writing with wit and eloquence Corballis makes nimble reference to literature mythology natural history sports and contemporary politics as he explains in fascinating detail what we now know about such varied subjects as early hominid evolution modern signed languages and the causes of left handedness From Hand to Mouth will have scholars and laymen alike talking and sometimes gesturing for years to come Language by mouth and by hand Iris Berent,Susan Goldin-Meadow,2015-05-11 While most natural languages rely on speech humans can spontaneously generate comparable linguistic systems that utilize manual gestures This collection of papers examines the interaction between natural language and its phonetic vessels human speech or manual gestures We seek to identify what linguistic aspects are invariant across signed and spoken languages and determine how the choice of the phonetic vessel shapes language structure its processing and its neural implementation We welcome rigorous empirical studies from a wide variety of perspectives ranging from behavioral studies to brain analyses diverse ages from infants to adults and multiple languages both conventional and emerging home signs and sign languages **Gestural Communication in Nonhuman and Human Primates** Katja Liebal,Cornelia Müller,Simone Pika,2007 The aim of this volume is to bring together the research in gestural communication in both nonhuman and human primates and to explore the potential of a comparative approach and its contribution to the question of an evolutionary scenario in which gestures play a significant role Evolutionary Neuroscience Jon H Kaas,2009-07-28 Evolutionary Neuroscience is a collection of articles in brain evolution selected from the recent comprehensive reference Evolution of Nervous Systems Elsevier Academic Press 2007 The selected chapters cover a broad range of topics from historical theory to the most recent deductions from comparative studies of brains The articles are organized in sections focused on theories and brain scaling the evolution of brains from early vertebrates to present day fishes amphibians reptiles and birds the evolution of mammalian brains and the evolution of primate brains including human brains Each chapter is written by a leader or leaders in the field and has been reviewed by other experts Specific topics include brain character reconstruction principles of brain scaling basic features of vertebrate brains the evolution of the major sensory systems and other parts of brains what we can learn from fossils the origin of neocortex and the evolution of specializations of human brains The collection of articles will be interesting to anyone who is curious about how brains evolved from the simpler nervous systems of the first vertebrates into the many different complex forms now found in present day vertebrates This book would be of use to students at the graduate or undergraduate levels as well as professional neuroscientists cognitive scientists and psychologists Together the chapters provide a comprehensive list of further reading and references for those who want to inquire further The most comprehensive authoritative and up to date single volume collection on brain evolution Full color throughout with many illustrations Written by leading scholars and experts

Doc-Humanity Maurizio Ferraris, 2022-09-12 However you view the present time it is a new century a new world and also a new humanity in fact humanity is not something that was ever defined once and for all but remains an open project For several decades we have been witnessing a revolution However unlike the political and ideological revolutions that took place around the First World War this is a technological and much more radical one that does not depend on people's beliefs but rather on the tireless labour of machines The rise of automation has brought about a revelation of something that had hitherto remained hidden in the workshops of homo faber That is there are very few functions apart from consumption where a machine cannot replace a human being because these material or spiritual machines need energy but they can also do without it whereas humans die if deprived of it or one can imagine a machine producing symphonies but not enjoying them So while human beings are still needed their roles and scopes have to be reconsidered Workers may be superfluous but humans are still needed including those who until recently only recognised themselves as producers The exclusion of workers from production does not discount humans being able to produce value in the form of consumption Recognising this will enable us to conceive the Webfare a new digital system that will teach us to find new names and new forms more tolerance and room for traditional human needs Above all it will teach us how to transform the time given to us by automation into an opportunity for progress
