Advanced Topics in Exception Handling Techniques Christophe Dony,2006-08-30 This book inspired by two ECOOP workshops on exception handling is composed of five parts the first four address exception handling and related topics in the context of programming languages concurrency and operating systems pervasive computing systems and requirements and specifications The last part offers case studies experimentation and qualitative comparisons The 16 coherently written chapters by leading researchers review a wide range of issues in exception handling Object-Technologies for Advanced Software Kokichi Futatsugi,Satoshi Matsuoka,1996-02-28 This book constitutes the refereed proceedings of the Second International Symposium on Object Technologies for Advanced Software ISOTAS 96 held in Ishikawa Japan in March 1996 ISOTAS 96 was sponsored by renowned Japanese and international professional organisations The 14 papers included in final full versions together with the abstracts of four invited papers were carefully reviewed and selected from a total of 56 submissions they address most current topics in object software technology object oriented programming object oriented databases etc The volume is organized in sections on design and evolution parallelism and distribution meta and reflection

and evolution of reuse **ECOOP '96 - Object-Oriented Programming** Pierre Cointe,1996-06-26 This book constitutes the refereed proceedings of the 10th European Conference on Object Oriented Programming ECOOP 96 held in Linz Austria in July 1996 The 21 full papers included in revised version were selected from a total of 173 submissions based on technical quality and originality criteria The papers reflect the most advanced issues in the field of object oriented programming and cover a wide range of current topics including applications programming languages implementation specification distribution databases and design Rigorous Development of Complex Fault-Tolerant Systems Michael Butler,2006-11-27 This book brings together 19 papers focusing on the application of rigorous design techniques to the development of fault tolerant software based systems It is an outcome of the REFT 2005 Workshop on Rigorous Engineering of Fault Tolerant Systems held in conjunction with the Formal Methods 2005 conference at Newcastle upon Tyne UK in July 2005 The Interpretation of Object-Oriented Programming Languages Iain Craig,2012-12-06 Object oriented languages are probably the most important development in computing for many years They allow us to describe and to model the physical as well as more abstract worlds They allow us to provide the computational entities we describe with a dynamics that is encapsulated thus leading to a more distributed notion of state a notion which inter alia makes programming and analysis somewhat more tractable Unfortunately if one wants to understand the concepts that are currently employed in object oriented languages one must refer to the proceedings of conferences such as OOPSLA or EGOOP These proceedings might be hard to obtain or obscure in any case without a background in the area the reader will almost certainly encounter concepts which will send them back to the literature The aim of this book is to provide in one place an interpretation of the primary concepts in object oriented programming languages In some cases for example multiple inheritance there is no single interpretation that is accepted by all in such cases the different approaches are explained An attempt has been made to be as comprehensive as possible but certain concepts have been omitted for the reason that they are not often encountered or they have fallen from grace The concept of the instantiable module appears to be one example of this Building Tightly Integrated Software Development Environments: The IPSEN Approach Manfred Nagl,1996-11-13 This coherently written book is the final report on the IPSEN project on Integrated Software Project Support Environments devoted to the integration of tools for the development and maintenance of large software systems The theoretical and application oriented findings of this comprehensive project are presented in the following chapters Overview introduction classification and global approach The outside perspective tools environments their integration and user interface Internal conceptual modeling graph grammar specifications Realization derivation of efficient tools Current and future work open problems Conclusion summary evaluation and vision Also included is a comprehensive bibliography listing more than 1300 entries and a detailed index
