Oceanographical Engineering Robert L. Wiegel,2013-09-03 As is the case with many modern fields of study oceanographical engineering cuts across the boundaries of several disciplines Like other scientific endeavors it aims to understand the nature of the ocean and to make use of this understanding for the benefit of humanity through better ports safer and more economical operations at sea and greater use of the oceans natural resources food raw materials and recreation This graduate level text requires a knowledge of fluid mechanics a background in the motions of sediments in fluids is advisable as is a concurrent course in structural dynamics Topics include the theory of periodic waves tsunamis storm surges and harbor oscillations the effect of structures on waves waves in shoaling water tides and sea level changes currents shores and shore processes some characteristics of the oceans waters moorings and other related subjects Certain portions of the book pertaining to the distribution of temperatures and salinities in the ocean are largely descriptive other portions such as the sections on waves are mathematical Numerous drawings and photographs supplement the text *The Publishers' Trade List Annual* ,1973 **Eight and nine place tables of elliptical functions based on Jacobi's parameter q , by M. 3D Motion of Rigid Bodies Ernesto Olguín Díaz,2018-12-06 This book offers an excellent complementary text for an advanced course on the modelling and dynamic analysis of multi body mechanical systems and provides readers an in depth understanding of the modelling and control of robots While the Lagrangian formulation is well suited to multi body systems its physical meaning becomes paradoxically complicated for single rigid bodies Yet the most advanced numerical methods rely on the physics of these single rigid bodies whose dynamic is then given among multiple formulations by the set of the Newton Euler equations in any of their multiple expression forms This book presents a range of simple tools to express in succinct form the dynamic equation for the motion of a single rigid body either free motion 6 dimension such as that of any free space navigation robot or constrained motion less than 6 dimension such as that of ground or surface vehicles In the process the book also explains the equivalences of and differences between the different formulations
