Eff Mech Phys Prop On Fabric:

Effect of Mechanical and Physical Properties on Fabric Hand H Behery, 2005-10-31 It is a consumer's instinct to use the sense of touch when choosing a garment to describe and assess the fabric quality and its suitability for a specific end use. The way that the fabric feels is described as its handle or fabric hand. Fabric hand can be evaluated by mechanical or electronic devices and by human judges using psychophysical or psychological techniques. *Effect of mechanical and physical properties on fabric hand* thoroughly explores the techniques and issues involved in this difficult subject. It begins by looking at the concepts of fabric hand with chapters on the developments in hand measurement, the application of statistical methods and the differences in fabric hand between different cultures. The second part is devoted to the different effects fiber yarn and fabric can have on fabric hand. The effect of factors including fiber yarn and woven fabrics are all outlined in separate chapters. Finally, the third section describes the effect that processing has on fabric hand. This includes processes such as wet processing and chemical finishing, mechanical finishing and refurbishing. Finally, two important appendices are included for reference. Appendix A is from the Hand Evaluation and Standardization Committee and outlines the Kawabata system for standardization and analysis of hand evaluation. Appendix B describes the SiroFAST system of fabric assurance by simple testing developed by CSIRO Australia. With an international panel of distinguished contributors, *Effect of mechanical and physical properties on fabric hand* provides comprehensive coverage on the subject. It will be an essential work for those researching and working in apparel and fashion design, textile selection, fabric designers and developers, manufacturers and those interested in fabric dyeing and finishing. Essential reading for all those working in apparel and fashion design, textile selection, fabric design and development and fabric manufacturers. Covers statistical methods in evaluating hand and a comparison of hand evaluation in different cultures. Looks at the effect processing has on fabric hand. **Engineering**

Apparel Fabrics and Garments J Fan, L Hunter, 2009-05-30 As consumer demands for specific attributes in their textiles increase and global competition intensifies, it is important that the industry finds ways of engineering certain performance requirements into textiles and apparel. This book reviews how fabrics and garments can be engineered to meet technical performance and other characteristics required for the specific end use. Chapters begin with fabric and garment handle and making up performance, followed by wear appearance issues such as wrinkling, pilling and bagging. Further chapters include fabric and garment drape, durability related issues as well as physiological and psychological comfort. Key topics of fire retardancy, waterproofing, breathability and ultraviolet protection are also discussed. Written by two highly distinguished authors, this is an invaluable book for a wide range of readers in the textile and apparel industries, ranging from textile and garment manufacturers, designers, researchers, developers to buyers. Reviews the engineering of fabrics to meet technical performance requirements for specific end use. Chapters examine various wear appearance issues such as wrinkling, bagging and fabric and garment drape. Discusses durability related issues including fire retardancy and waterproofing as well as
