The Education Systems of Europe Wolfgang Hörner, Hans Döbert, Botho von Kopp, Wolfgang Mitter, 2007-05-03 Education is a paradoxical phenomenon On the one hand it is universal as since the period of Enlightenment it has been declared universal good for everybody Moreover we learnt by historical research following the ideas of world system theory that since this time as far as its main structures are concerned compulsory state education given by professional teachers in classrooms it took even universal traits However on the other hand the fact that education became state education organised or at least controlled by the state was the beginning of another tradition line education in the form of state organised educational institutions became a means of creating national identity Universal inclusion as for the light of reason shining for everybody is opposed to more or less nationalist exclusion of all the others shaping the feature of a particular nation state with a particular educational system This fundamental dialectical tension between the universal and the particular was one of the important motives to make this handbook One of the central issues of the country studies is precisely to display the relationship between universal values and the search for national identity Another motive is given by the European dimension of the handbook

The New Education in Europe Frederick William Roman, 2019-05-28 Originally published in 1924 as outlined in the preface this book is based on the belief that the only substantial hope of rescue in the present world crisis and

the saving of even civilization itself depend upon the degree to which the creative thought that the coming generations may bring is applied to a continued and purposeful reconstruction of the modes of living The world is in need as never before of stronger and more clearly conceived ideals of conscious effort in the service of humanity The salvation of society must be mined out of its own depths Much of this work must be done by those now at school and therefore we are at once led to inquire to what extent the present systems of education provide for conditions that are provocative of free and spontaneous thought In each of the several countries with which the present study is concerned there is a considerable body of men and women who have undertaken a serious and thoughtful campaign of education The pages that follow attempt to give a summary account of the origin and the likelihood of success of these several undertakings Re-engineering Engineering Education in Europe Claudio Borri, Francesco Maffioli, 2007 Contributing to the development and the enrichment of the European dimension in Engineering Education EE constituted the global goal of TREE In other words to enhance the compatibility of the many diverse routes to the status of Professional Engineer which exist in Europe and hence to facilitate greater mobility of skilled personnel and integration of the various situations throughout Europe The activity of the TN TREE made up by some 110 higher education Institutions and Associations has been developed along four main lines A the tuning line B the education and research line C the attractiveness of EE line D the sustainability line This volume accompanied by a CD Rom presents the results of three years of works in the frame of the Thematic Network TREE which was activated and financed in the frame of the SOCRATES Programme in the period 2004 2007
