Nature-Inspired Computing and Optimization Srikanta Patnaik,Xin-She Yang,Kazumi Nakamatsu,2017-03-07 The book provides readers with a snapshot of the state of the art in the field of nature inspired computing and its application in optimization The approach is mainly practice oriented each bio inspired technique or algorithm is introduced together with one of its possible applications Applications cover a wide range of real world optimization problems from feature selection and image enhancement to scheduling and dynamic resource management from wireless sensor networks and wiring network diagnosis to sports training planning and gene expression from topology control and morphological filters to nutritional meal design and antenna array design There are a few theoretical chapters comparing different existing techniques exploring the advantages of nature inspired computing over other methods and investigating the mixing time of genetic algorithms The book also introduces a wide range of algorithms including the ant colony optimization the bat algorithm genetic algorithms the collision based optimization algorithm the flower pollination algorithm multi agent systems and particle swarm optimization This timely book is intended as a practice oriented reference guide for students researchers and professionals

The Tinkerer's Accomplice J. Scott Turner,2010-09-30 Most people when they contemplate the living world conclude that it is a designed place So it is jarring when biologists come along and say this is all wrong What most people see as design they say purposeful directed even intelligent is only an illusion something cooked up in a mind that is eager to see purpose where none exists In these days of increasingly assertive challenges to Darwinism the question becomes acute is our perception of design simply a mental figment or is there something deeper at work Physiologist Scott Turner argues eloquently and convincingly that the apparent design we see in the living world only makes sense when we add to Darwin s towering achievement the dimension that much modern molecular biology has left on the gene splicing floor the dynamic interaction between living organisms and their environment Only when we add environmental physiology to natural selection can we begin to understand the beautiful fit between the form life takes and how life works In *The Tinkerer's Accomplice* Scott Turner takes up the question of design as a very real problem in biology his solution poses challenges to all sides in this critical debate

Computational Geometry and Graphs Jin Akiyama,Hiro Ito,Toshinori Sakai,2014-11-20 This book constitutes the thoroughly refereed post conference proceedings of the 16th Japanese Conference on Discrete and computational Geometry and Graphs JDCDGG 2013 held in Tokyo Japan in September 2013 The total of 16 papers included in this volume was carefully reviewed and selected from 58 submissions The papers feature advances made in the field of computational geometry and focus on emerging technologies new methodology and applications graph theory and dynamics Neural Networks: Artificial Intelligence and Industrial Applications Bert Kappen,Stan Gielen,2012-12-06 Neural networks is a field of research which has enjoyed rapid expansion in both the academic and industrial research communities This volume contains papers presented at the Third Annual SNN Symposium on Neural Networks to be held in Nijmegen The Netherlands 14 15 September 1995 The papers are divided into two sections the first gives an overview of new developments in neurobiology the cognitive sciences robotics vision and data modelling The second presents working neural network solutions to real industrial problems including process control finance and marketing The resulting volume gives a comprehensive view of the state of the art in 1995 and will provide essential reading for postgraduate students and academic industrial researchers

Visual Perception Lothar Spillmann,John S. Werner,2012-12-02 This book presents an interdisciplinary overview of the main facts and theories that guide contemporary research on visual perception While the chapters cover virtually all areas of visual science from philosophical foundations to computational algorithms and from photoreceptor processes to neuronal networks no attempt has been made to provide an exhaustive treatment of these topics Rather researchers from such diverse disciplines as psychology neurophysiology anatomy and clinical vision sciences have worked together to review some of the most important correlations between perceptual phenomena and the underlying neurophysiological processes and mechanisms The book is thus intended to serve as an advanced text for graduate students and as a guide for all vision researchers to understanding current progress outside their specialized fields of interest Examines parallel processing of visual information Discusses links between physiologically measured receptive fields and psychophysically measured perceptive fields Presents a spatial sampling by the retina and cortical modules Covers signal transduction and the sites of adaptation Describes a single cell analysis of attention Discusses computational models of vision *Handbook of Memristor Networks* Leon Chua,Georgios Ch. Sirakoulis,Andrew Adamatzky,2019-11-12 This Handbook presents all aspects of memristor networks in an easy to read and tutorial style Including many colour illustrations it covers the foundations of memristor theory and applications the technology of memristive devices revised models of the Hodgkin Huxley Equations and ion channels neuromorphic architectures and analyses of the dynamic behaviour of memristive networks It also shows how to realise computing devices non von Neumann architectures and provides future building blocks for deep learning hardware With contributions from leaders in computer science mathematics electronics physics material science and engineering the book offers an indispensable source of information and an inspiring reference text for future generations of computer

Perception R. Held,H.W.

Leibowitz, H.L. Teubner, 2012-12-06 This volume was designed to focus on the problems of perception and originally was to have been solely edited by Professor Hans Lukas Teuber who was a member of the editorial board which initiated production of the Handbook Accordingly he issued invitations to a number of researchers in perception asking them to contribute chapters written in a style described in his words I hope that no author will feel constrained to undertake a major search of the literature he could do instead on an area in which he has been quite active himself and where most of the issues are immediately obvious to him In this way the writing of the chapter should be enjoyable rather than a chore it should result in a personal account of the state of a given area rather than in an encyclopedic treatise the field deserves this sort of summary particularly if it is pointed toward the future and speeds the convergence of developments in sensory physiology and psychological studies of perception With the growing burden of national and international commitments including departmental headship Professor Teuber felt that it would be wise to share the editorial responsibilities for this volume and accordingly asked Professors Richard Held and Herschel Leibowitz to co edit the volume with him in the same spirit as outlined in his invitation to authors They agreed to help in this task
