and Basidiomycetes: Taxonomy and Interaction with Their Host Ji-Chuan Kang, Jie Chen, Xiang-Yu Zeng, Jian-Kui Liu, Yong-Zhong Lu, 2023-08-01 **Mushrooms in Forests and Woodlands** Anthony B. Cunningham, Xuefei

Yang, 2012-06-25 Many mushrooms or the fruits of fungi are extremely valuable wild gathered products which are utilised for both their medicinal properties and as food. In many of the world's tropical and temperate forests they are the primary source of income for the people who live there. These forests range from temperate woodlands and small forests to high altitude forests in the Himalaya and tropical miombo woodlands in south central Africa. In south west China over 200 species of wild fungi in 64 genera are commercially traded while in Europe and North America woodlands and small forests are the source of many highly prized mushrooms and an essential resource for many small enterprises and collectors. Yet the increased demand for timber has resulted in the rapid expansion of forestry which in turn has destroyed the natural habitat of many fungi unbalancing both forest economics and ecology. Despite the economic, social and cultural values of fungi there is a general lack of understanding of their importance to local livelihoods and forest ecology. This book aims to fill this gap and extends the People and Plants Conservation Series beyond the plant kingdom into the related world of fungi and mushrooms. It demonstrates the crucial roles that fungi play in maintaining forest ecosystems and the livelihoods of rural people throughout the world while providing good practice guidelines for the sustainable management of this resource and an assessment of economic value. It brings together the perspectives of biologists, anthropologists and forest and woodland managers to provide a unique interdisciplinary and international overview of the key issues. *Heterocycles*, 2009

Atlas of Chinese Macrofungal Resources Yu Li, Taihui Li, Zhuliang Yang, Tolgor Bau, Yucheng Dai, 2024-05-30 This book is part of the 4 volumes collection of Atlas of Chinese Macrofungal Resources. This atlas documented 1819 species or varieties in 509 genera of macrofungi known from China which are according to their morphological characteristics practically divided into 10 groups including 196 larger ascomycetes, 21 jelly fungi, 47 coral fungi, 637 polyporoid, hydnoaceous and lephoroid fungi, 11 cantharelloid fungi, 653 agarics, 130 boletes, 75 gasteroid fungi, 16 larger pathogenic fungi on crops and 33 larger myxomycetes. All species are evidenced with vouchers and photographs. About 370 of the listed species occupying 1/5 of the total species have their type localities in China among which over 260 species accounting for 1/7 of the species were firstly discovered and published by the present authors. Some of the species are endemic to China and East Asia. Descriptions of all species are accompanied with color photographs showing their macro morphology and/or habitat. The macroscopic and microscopic diagnostic characters, ecological habits, economic importance, edibility, medicinal availability or toxicity and geographical distribution in China of all species are described in brief and easy to understand style. In the guide the characteristics and using method of the book, related mycological vocabulary, common taxonomic techniques and positions of the fungal genera in modern taxonomic system are briefly introduced. The knowledge of this book should be interesting to
