

## Multistakeholder platforms

- Stakeholders with interests in water decisions need to work together to understand their differences and search for solutions that each can accept
- Different stakeholders are identified and, usually through representatives, invited and assisted to interact in a deliberative forum that focuses on:
  - sharing knowledge and perspectives
  - generating and examining options
  - informing and shaping negotiations and decisions
- The purpose and scope of an MSP must be clear, with appropriate scales and levels for deliberation and analysis (for example watershed versus river basin, or local district versus national).
- MSPs expand representation and participation of stakeholders in governance. They encourage learning and greater understanding of interdependencies among stakeholders and ways of resolving contested issues
- By providing a pathway for deliberation, MSPs can lead to better decisions and water agreements that can be more successfully implemented.
