Complex Analysis and Geometry Pierre Dolbeault, A. Iordan, G. Henkin, H. Skoda, J.-M. Trepreau, 2012-12-06 This meeting has been motivated by two events the 85th birthday of Pierre Lelong and the end of the third year of the European network Complex analysis and analytic geometry from the programme Human Capital and Mobility For the first event Mathematicians from Poland Sweden United States and France whose work is particularly related to the one of P Lelong have accepted to participate for the second the different teams of the Network sent lecturers to report on their most recent works These teams are from Grenoble Wuppertal Berlin Pisa and Paris VI in fact most of their results are also related to Lelong's work and a posteriori it is difficult to decide whether a talk is motivated by the first or by the second event We chose only plenary lectures usually of one hour except a small number given by young mathematicians which have been shorter A two hours problem session has been organized The Proceedings gather papers which are exact texts of the talks or are closely related to them The members from the Network and five other lecturers sent us papers the other lecturers published the content of their talks in mathematical Journals All the presented texts have been submitted to referees independent of the organizing committee the texts of the problems have been approved by their authors French Bibliographical Digest, 1953

Asymptotic Wave Theory Maurice Roseau, 2012-12-02 Asymptotic Wave Theory investigates the asymptotic behavior of wave representations and presents some typical results borrowed from hydrodynamics and elasticity theory It describes techniques such as Fourier Laplace transforms operational calculus special functions and asymptotic methods It also discusses applications to the wave equation the elements of scattering matrix theory problems related to the wave equation and diffraction Organized into eight chapters this volume begins with an overview of the Fourier Laplace integral the Mellin transform and special functions such as the gamma function and the Bessel functions It then considers wave propagation with emphasis on representations of plane cylindrical or spherical waves It methodically introduces the reader to the reflection and refraction of a plane wave at the interface between two homogeneous media the asymptotic expansion of Hankel's functions in the neighborhood of the point at infinity and the asymptotic behavior of the Laplace transform The book also examines the method of steepest descent the asymptotic representation of Hankel's function of large order and the

scattering matrix theory The remaining chapters focus on problems of flow in open channels the propagation of elastic waves within a layered spherical body and some problems in water wave theory This book is a valuable resource for mechanics and students of applied mathematics and mechanics **Special Functions and Orthogonal Polynomials** Richard

Beals, Roderick Wong, 2016-05-17 A comprehensive graduate level introduction to classical and contemporary aspects of special functions **Heat Transfer** Sam Stuart, 2013-10-22 Heat Transfer Current Applications of Air Conditioning deals with problems and applications of air conditioning The discussions are organized around non stationary heat transfer through walls study of confined rooms or enclosures calculation of cooling loads heat transfer with two phase refrigerants measurement of thermal conductivity and water vapour permeability of insulating materials and tests on air handling equipment room air conditioners induction or fan coil air conditioners This book is comprised of 60 chapters and begins with an assessment of the unit system controversy in the United States and the quest for an ultimate resolution The following chapters explore the resolution of conductive heat transfer problems using the finite element method thermal behavior of composite walls under transient conditions thermal and electrical models for solving problems of non stationary heat transfer through walls and use of a radiometer to measure the average temperature of a wall Experimental results for mixed air convection along a vertical surface are also presented This monograph will be a valuable resource for electronics engineers

Dynamics of Satellites / Dynamique des Satellites Maurice Roy, 2013-04-17 Depuis le lancement de SPOUTNIK I par l'Union Soviétique le 4 Octobre 1957 des expériences humaines de Mécanique céleste de cette sorte ont été répétées et de nombreuses reprises en U R S S et aux U S A En 1961 sur ma proposition l'Union Internationale de Mécanique céleste et appliquée retint l'idée de consacrer en 1962 un Symposium spécial à la confrontation des résultats des expériences soviétiques et américaines en vue d'en tirer le maximum d'enseignements sur la question fondamentale suivante concernant la dynamique des satellites artificiels de la Terre : quelles sont la nature et les lois des forces réelles qui agissent sur ces mobiles au voisinage de notre planète et qui déterminent par conséquent leur mouvement En d'autres termes il s'agissait de faire le point de nos connaissances sur le problème du mouvement des Astres magistralement résolu par NEWTON il y a plus de trois siècles pour des astres quasi ponctuels et assez éloignés Les moyens d'observation utilisés pour connaître avec la meilleure précision possible le mouvement des satellites artificiels lancés depuis 1957 et le fait de la proximité relative de ces satellites par rapport à la Terre sont par eux-mêmes d'une nature qui révèlent soit des alterations de la loi classique de l'attraction newtonienne dont la signification serait à rechercher soit l'intervention de forces perturbatrices dont l'origine et l'expression seraient à préciser *Geoid and its Geophysical Interpretations* Petr Vaníček, Nikolaos T. Christou, 2020-09-23 *Geoid and its Geophysical Interpretations* explains how an accurate geoid can be constructed and used for a variety of applied and theoretical geophysical purposes The book discusses existing techniques for geoid computation recently developed mathematical and computational tools designed for applications and various interpretations Principles and results

are well illustrated This book will be an excellent reference for geodesists geophysicists geophysical prospectors oceanographers and researchers and students in geophysics and geodesy

Geostatistical Glossary and Multilingual Dictionary Ricardo A. Olea,International Association for Mathematical Geology. Committee on Geostatistics,1991 Geostatistics is a branch of mathematics that deals with the sampling analysis interpretation and display of phenomena that fluctuate in space Although not all geostatistical methods are probabilistic in nature the most important accomplishments in the field have been in estimation and forecasting extending probabilistic methods of stochastic processes and time series analysis to the spatial domain This book gives the only available comprehensive collection of definitions of geostatistical terms It lists more than 600 entries selected from the book and journal literature through the end of 1989 Where appropriate multiple meanings have been included for specific terms Cross references abound to help the reader when the definitions of a word leads to the search for other terms Although all the definitions are in English equivalent terms are provided in alphabetized lists in Chinese French German Greek Portuguese Russian and Spanish This volume will provide a useful reference for students scientists engineers and others concerned with the meaning of terms found in the geostatistical literature and heard in professional practice Definitions and entries have been prepared with multiple levels of rigor and complexity in order to provide help to a readership that may range from inexperienced practitioners to advanced researchers
