## **Food Behavior:**

**Handbook of Behavior, Food and Nutrition** Victor R. Preedy, Ronald Ross Watson, Colin R. Martin, 2011-04-15 This book disseminates current information pertaining to the modulatory effects of foods and other food substances on behavior and neurological pathways and importantly vice versa This ranges from the neuroendocrine control of eating to the effects of life threatening disease on eating behavior The importance of this contribution to the scientific literature lies in the fact that food and eating are an essential component of cultural heritage but the effects of perturbations in the food cognitive axis can be profound The complex interrelationship between neuropsychological processing diet and behavioral outcome is explored within the context of the most contemporary psychobiological research in the area This comprehensive psychobiology and pathology themed text examines the broad spectrum of diet behavioral and neuropsychological interactions from normative function to occurrences of severe and enduring psychopathological processes **Eating Behavior and Obesity** Shahram Heshmat, 2011-06-10 Print CourseSmart **Assessment of Eating Behavior** Adrian Meule, 2023-05-08 Eating behavior encompasses a broad range of aspects from under to overeating and from normal to pathological eating The expert contributors to this volume provide a comprehensive overview of assessment methods for eating behavior research and clinical practice which include both self report questionnaires and structured interviews as well as assessment of food intake in the laboratory ecological momentary assessment cognitive behavioral tasks and psychophysiological measures They explore the assessment of eating disorders such as anorexia nervosa bulimia nervosa binge eating disorder and others They also address topics that may be associated with disordered eating and obesity but are also relevant in persons without these conditions such as restrained eating and dieting emotional eating food craving and food addiction orthorexia nervosa intuitive and mindful eating and grazing Further topics that are strongly connected to eating behavior such as body image physical activity body composition and expenditure food neophobia and disgust sensitivity and weight related stigmatization are also examined This book is essential reading for researchers working in clinical and health psychology consumer psychology psychiatry and nutrition science as well as practitioners including psychotherapists physicians nutrition counsellors who assess eating behavior and related aspects in their daily work **The Two-Way Link between Eating Behavior and Brain Metabolism** Tanya Zilberter, 2016-01-13 This research topic collected and connected information concerning both the underlying metabolic mechanisms and consequences of eating behaviors These two aspects are tremendously important for a better understanding of eating behavior abnormalities as well as for improving education on eating disorders and behaviors **Addictions and Eating Behavior** Ramón Sotomayor-Zárte, Claudio Perez-Leighton, 2025-04-01 Food intake is associated with brain areas that control hunger satiety motivation for and pleasure caused by the intake of foods These areas integrate to promote the consumption of highly rewarding foods when hungry and stop once sated However the easy access to ultra processed and highly palatable foods has led to the dysregulation of this

regulatory system resulting in increased food intake that leads to obesity This condition reinforces the consumption of palatable and energy dense foods and is also related to a higher prevalence of cardiovascular metabolic oncological and neuropsychiatric diseases Feeding is a complex process that involves brain areas that control homeostasis learning memory emotion and reward among others Therefore deregulation of these areas can lead to developing hyperphagia a greater preference for obesogenic foods and in the short or medium term to developing overweight and obesity Furthermore obesity is a pandemic related to a higher prevalence of cardiovascular metabolic oncological and neuropsychiatric diseases among others For this reason this Research Topic focuses on the neurobiological mechanisms that bidirectionally lead to the development of changes in eating behaviors and consuming obesogenic foods Understanding these mechanisms requires an integrative perspective that includes an in depth study of the brain mechanisms that control feeding behaviors and food intake and their integration with different physiological systems i e gastrointestinal neuroendocrine and environmental factors i e food availability and access
