Climate adaptation, perceived resilience, and food security Food and Agriculture Organization of the United Nations, 2023-09-08 This study uses comparable data collected in a pastoralist setting in Kenya and a rain fed crop production context in Zambia to examine the relationship between climate adaptive practices food security and households perceived resilience against climatic shocks We sort climate adaptive practices based on their relative factor intensities or diversification decisions which allows us to draw comparisons regarding these relationships across diverse production systems Using the doubly robust inverse probability weighted regression adjustment IPWRA approach to account for potential selection issues we find that capital intensive adaptive strategies are consistently and positively associated with resilience food security and income in both contexts Labour intensive and diversification strategies have generally positive but heterogeneous impacts across the two production systems likely governed by contextual differences Results also highlight the complementarity of adaptive practices in improving household welfare in both contexts The findings suggest that alleviating the barriers to adoption of climate adaptive practices and promoting adaptation in several dimensions of rural livelihoods simultaneously can enhance resilience to climate shocks and reduce poverty *Food and Nutrition Security: Underutilized Plant and Animal-Based Foods* Yasmina Sultanbawa, Michael Erich Netzel, Dharini Sivakumar, Olivia Renee Louise Wright, 2022-02-28 Prof Dharini Sivakumar was previously an Associate Partner at Simfresh International an agribusiness development company All other Topic Editors declare no competing interests with regard to the Research Topic subject *World Agricultural Economics and Rural Sociology Abstracts*, 2000 **Routledge Handbook of Ecosystem Services** Marion Potschin, Roy Haines-Young, Robert Fish, R. Kerry Turner, 2016-01-22 The idea that nature provides services

to people is one of the most powerful concepts to have emerged over the last two decades. It is shaping our understanding of the role that biodiverse ecosystems play in the environment and their benefits for humankind. As a result, there is a growing interest in operational and methodological issues surrounding ecosystem services amongst environmental managers and many institutions are now developing teaching programmes to equip the next generation with the skills needed to apply the concepts more effectively. This handbook provides a comprehensive reference text on ecosystem services integrating natural and social science including economics. Collectively, the chapters written by the world's leading authorities demonstrate the importance of biodiversity for people, policy and practice. They also show how the value of ecosystems to society can be expressed in monetary and non-monetary terms so that the environment can be better taken into account in decision making. The significance of the ecosystem service paradigm is that it helps us redefine and better communicate the relationships between people and nature. It is shown how these are essential to resolving challenges such as sustainable development and poverty reduction and the creation of a green economy in developing and developed world contexts.
