Building Block and serves as an ongoing monitoring tool that can be used alongside the recommendations provided **The SDGs and food system challenges: Global trends and scenarios toward 2030** ,2024-02-12 Progress toward reducing global hunger has stalled since the mid 2010s In fact hunger is on the rise again driven by slowing economic growth and protracted conflict intensified by the impacts of climate change and economic shocks in many low and middle income countries In addition food systems worldwide have suffered disruptions in recent years caused by the COVID 19 related global recession and associated supply chain disruptions and exacerbated by the war in Ukraine These factors have also jeopardized efforts at addressing the challenges to food system sustainability The 2030 Agenda for Sustainable Development and the related sustainable development goals SDGs defined in 2015 recognize these challenges and set ambitious targets to end hunger and all forms of malnutrition and to make agriculture and food systems sustainable by 2030 Many other fora have restated and reiterated these ambitions including the 2021 United Nations Food System Summit UNFSS While governments around the world have subscribed to these ambitions collectively they have not been very specific as to how to achieve the SDGs and related goals and targets except for three means of implementation MOI involving i increases in research and development ii reductions in trade distortions and iii improved functioning and reduced volatility in food markets This paper is part of a wider effort at assessing the international community s follow through on the above ambitions and the related implicit or explicit commitments made toward action for achieving them While not presenting new research findings we bring together available evidence and scenario analyses to assess the progress made toward the ambitions for transforming food systems the actions taken in regard of the internationally concerted agenda and the potential for accelerating progress The number of hungry people in the world has risen from 564 million in 2015 when the SDGs were agreed to 735 million in 2022 While declines to between 570 and 590 million by 2030 are projected this is far above the 470 million projected in the absence of the COVID 19 pandemic and the Ukraine war The share of the world s people unable to afford healthy diets is projected to decline from 42 percent in 2021 to a still far too high 36 percent by 2030 On the means of implementation levels of spending on agricultural research and development have increased particularly in key developing countries such as Brazil China and India However rates of investment remain too low for comfort particularly in low income countries Also little progress has been made in reducing agricultural trade distortions and many countries continue to use trade policy measures such as export restrictions which have proven to increase the volatility of both world and domestic food prices We conclude that progress toward the SDG 2 targets has been dismal and that the food system challenges have only become bigger But we also find that it is not too late to accelerate progress and that the desired food system transformation can still be achieved over a reasonable timespan and at manageable incremental cost Doing so will require unprecedented concerted and coherent action on multiple fronts which may prove the biggest obstacle of all **International Yearbook of Soil Law and Policy 2020/2021** Harald Ginzky,Elizabeth Dooley,Irene L. Heuser,Patricia Kameri-Mbote,Robert Kibugi,Till Markus,Oliver

C. Ruppel,2022-06-28 This book presents an important discussion on land tenure rights for the effective implementation of sustainable soil management provisions It investigates a variety of aspects such as the clash of modern and traditional tenure concepts forms of illegal or illegitimate land acquisition and the preconditions for legal and legitimate investments In addition the book analyses the challenges to ensuring secure land tenure rights in Africa and in Germany Lastly it provides information on the role of women in this context This fifth volume of the International Yearbook of Soil Law and Policy is divided into four parts the first of which deals with various aspects of the theme Land Tenure Rights and Sustainable Soil Management The second part covers recent international developments the third part presents regional and national reports and the fourth discusses overarching issues Given the range of key topics covered the book offers an indispensable tool for all academics legislators and policymakers working in this field The International Yearbook of Soil Law and Policy series discusses central questions in law and politics with regard to the protection and sustainable management of soil and land at the international national and regional level
