## **Food Colour And Appearance:**

*Food Colour and Appearance* John B. Hutchings, 2011-06-27 Much of man's behaviour is controlled by appearance but the appearance of his food is of paramount importance to his health and well being. In day to day survival and marketing situations we can tell whether or not most foods are fit to eat from their optical properties. Although vision and colour perception are the means by which we appreciate our surroundings visual acceptance depends on more than just colour. It depends on total appearance. In the recent past the food technologist has been under pressure to increase his/her understanding of first the behaviour of raw materials under processing and second the behaviour and motivation of his/her customers in a growing more discriminating and worldwide market. The chapters which follow describe the philosophy of total appearance, the factors comprising it and its application to the food industry. Included are considerations of the evolutionary, historical and cultural aspects of food appearance, the physics and food chemistry of colour and appearance, the principles of sensory appearance assessment and appearance profile analysis as well as instrumental measurement, the interaction of product appearance control and acceptance in the varied environments of the laboratory, production line, supermarket, home and restaurant. A broad examination has been made in an attempt to get into perspective the importance of appearance to all sectors of the industry.
