L. Leakey, 1974 **Indigenous Knowledge and Its Uses in Southern Africa** Hans Normann, 1996 This is a publication of the Institute for Indigenous Theory and Practice and the HSRC Co operative Programme Affordable Social Provision It consists mainly of the edited contributions to an indaba on indigenous knowledge and practice organized by the Institute for Indigenous Theory and Practice at the South African Museum Cape Town on 24 November 1994 While the HSRC values the opportunity to disseminate information on the very important research and services referred to in this publication it does not necessarily agree with all the views expressed and the conclusions reached in the publication Parmana Anna Curtenius Roosevelt, 2014-05-10 Parmana Prehistoric Maize and Manioc Subsistence along the Amazon and Orinoco argues for a reinterpretation of prehistoric subsistence in the Greater Amazonian region of South America Based on the preliminary results of an archaeological fieldwork in Parmana of the Orinoco basin Venezuela the book re evaluates some of the assumptions made by anthropologists about human adaptation and the development of aboriginal culture in Amazonia Comprised of six chapters this volume begins with a review of the theories of five scholars of aboriginal Amazonia in terms of logic and documentation Julian Steward Betty Meggers Robert Carneiro Donald Lathrap and Daniel Gross The next chapter presents an alternative theory the hypothesis of technological change and explains its theoretical framework The demographic theory of cultural evolution is discussed and its basis in general evolutionary theory is explained Subsequent chapters focus on the empirical evidence for the hypothesis in studies of tropical resources with emphasis on the productivity of tropical lowland soils and Amazonian faunal resources as well as the roles of maize and manioc in prehistoric Amazonian subsistence the physical and biological characteristics of the Parmana region as an environment for prehistoric human adaptation and the history of subsistence and population growth in prehistoric Parmana The final chapter suggests possible directions for future research on the development of aboriginal culture in Amazonia The book is illustrated with numerous maps tables and photographs most of them never published before This monograph should be of interest to archaeologists and anthropologists **Publications of the International Agricultural Research and Development Centers**, 1989 Agrometeorology of the Rice Crop World Meteorological Organization, **Tropical Legumes** National Research Council, Research Coun National Research Council, 2002-06 This National Academy of Sciences report describes plants of the family Leguminosae all of them greatly underexploited Some are extensively used in one part of the world but unknown

elsewhere others are virtually unknown to science but have particular attributes that suggest they could become major crops in the future a few are already widespread but their possibilities are not yet fully realized Most of the plants described in this book have the capacity to provide their own nitrogenous fertilizer through bacteria that live in nodules on their roots the bacteria chemically convert nitrogen gas from the air into soluble compounds that the plant can absorb and utilize As a result legumes generally require no additional nitrogenous fertilizer for average growth This is advantageous because commercial nitrogenous fertilizers are now extremely expensive for peasant farmers This report demonstrates how farmers in developing countries by using leguminous plants can grow useful crops while avoiding that expense However the plants to be discussed here should be seen as complements to not as substitutes for conventional tropical crops *Progress in Upland Rice Research* International Rice Research Institute,1986 Characterization and classification of upland rice growing environments integrated upland rice farming systems biological stresses with special emphasis on blast preproduction testing and production programs Plant Disease: An Advanced Treatise James G. Horsfall,2012-12-02 Plant Disease Volume I How Disease is Managed is part of a five volume treatise that discusses the sociology of plant pathology This volume discusses the great variety of techniques for the diagnosis of plant disease crop destruction and theory behind the art of disease management It also explores topics on how society is constraining the possibilities for management management of diseases through changing the environment biological control of plant diseases weed management through pathogens and the epidemiologic and genetic concepts of managing host genes Subsequent chapter presents the management of plant disease with chemicals and some examples of diseases that benefit man and even a few that benefit plants This book also describes the organization and operation of society supported disease management activities as well as important advisory services provided by the industry This volume concludes with proposals for the education of the practitioners of plant pathology This work is intended for the advanced researcher in plant pathology to broaden his views stimulate his thinking and help to synthesize ideas **Wild Crop Relatives: Genomic and Breeding Resources** Chittaranjan Kole,2011-08-17 Wild crop relatives are now playing a significant part in the elucidation and improvement of the genomes of their cultivated counterparts This work includes comprehensive examinations of the status origin distribution morphology cytology genetic diversity and available genetic and genomic resources of numerous wild crop relatives as well as of their evolution and phylogenetic relationship Further topics include their role as model plants genetic erosion and conservation efforts and their domestication for the purposes of bioenergy phytomedicines nutraceuticals and phytoremediation Wild Crop Relatives Genomic and Breeding Resources comprises 10 volumes on Cereals Millets and Grasses Oilseeds Legume Crops and Forages Vegetables Temperate Fruits Tropical and Subtropical Fruits Industrial Crops Plantation and Ornamental Crops and Forest Trees It contains 125 chapters written by nearly 400 well known authors from about 40 countries *Global Workshop on Root and Tuber Crops Propagation* James Cock,1986 Most crop specialists agree that the use of good quality seed is the

quickest way to increase crop production and productivity the term seed is used to denote true botanical seed tubers roots or other plant parts Since root and tuber crops are almost exclusively multiplied by vegetative propagation this is the meaning of seed commonly used in this publication Without good seed the impact of other inputs on yield such as fertilizer and soil preparation will not be as economical In addition good seed can be adapted to small as well as large farm and it is responsive even under less favorable climatic conditions

New Lives for Ancient and Extinct Crops Paul E. Minnis, 2014-05-22 Over many millennia farmers across the world have domesticated literally thousands of species and developed tens of thousands of varieties of these plants Despite the astonishing agricultural diversity that existed long ago the world's current food base has narrowed to a dangerous level By studying the long and dynamic history of farming in the ancient past archaeology can play a part in helping ensure the stability of the human food supply by identifying once important crops and showing where and how such crops were grown in the past Thanks to this work extinct crops might even be redomesticated from their wild progenitors New Lives for Ancient and Extinct Crops profiles nine plant species that were important contributors to human diets and had medicinal uses in antiquity maygrass chenopod marshelder agave little barley chia arrowroot little millet and bitter vetch Each chapter is written by a well known scholar who illustrates the global value of the ancient crop record to inform the present From eastern and western North America Mesoamerica South America western Asia and south central Asia the contributors provide examples of the unexpected wealth of information available in the archaeological record about ancient and extinct crops

The Potato as a Food Crop for the Developing World Douglas E. Horton, International Potato Center. Social Science Department, 1980

Agricultural Research and Technology Transfer Isaac Arnon, 2012-12-06
Agricultural research was probably the first and is the most widespread form of organised research in the world and one in which both the most developed and underdeveloped countries are engaged Whilst most forms of research activity such as in the field of medicine have world wide application agricultural research by its very nature has to be regional practically no research finding can be adopted without studying the results of its application under the infinite number of ecological situations with which the farmers of the world are faced The improvement of agricultural production is the essential first step whereby developing countries can hope to raise their standard of living Research is therefore an activity in which no underdeveloped country can afford not to engage nor can countries in which agriculture has reached a high level of development and sophistication afford to neglect agricultural research It is not because of inertia or vested interests that highly industrialised countries maintain mostly at public expense a costly and complex infrastructure for agricultural research Even when problems of overproduction weigh heavily on the economy agricultural research is considered the essential key to further progress the objectives and goals are simply changed and adapted to the needs of the economy
