Valdiya, Jaishri Sanwal, 2017-11-16 An erudite work on tectonic resurgence in Late Quaternary time of the Indian subcontinent embracing India Pakistan Nepal Bhutan and Bangladesh Neotectonism in the Indian Subcontinent dwells on the causes and consequences of tectonic events that fashioned the landscape of a land characterized by a fragmented framework The narratives on the structural and geomorphic developments during the morphogenic phase of the geodynamic history of the Indian subcontinent explain many phenomena These include the tremendous height and spectacular structural geomorphic architecture of the Himalaya and the behaviour of wayward rivers in the sinking and rising Indo Gangetic Plains In addition are the shifting deflection piracy and even disappearance of rivers and streams in the dry desertic terrane of western India as well as the unique drainage pattern of the ruptured and rifted plateaus and coastal belts of Peninsular India The formation of huge lakes due to river ponding in the stable continental shield in Karnataka is also explained All of these phenomena are accompanied by profuse illustrations Neotectonism in the Indian Subcontinent portrays the evolution of the extraordinary landforms and landscapes of the subcontinent constituted by multiple terranes of contrasted lithostructural architecture and distinctive geomorphic layout each with an altogether different geological history It chronicles events of crustal unrest or tectonic turmoil manifested as displacement subsidence and uplift of the ground with bizarre drainage changes and episodic seismicity This book caters to planners engineers and hazard managers but also satisfies the curiosity of those who are interested in understanding the formation of the Indian subcontinent Identifies areas and belts recurrently ravaged by geological hazards resulting from neotectonic activities Provides a wealth of information on neotectonic movements and consequent modification of landscape drainage aberrations and ground vulnerability including references that also provide additional resources for those who seek to pursue comprehensive investigations Includes much new observation and refreshing interpretation to explain many of the striking landforms of the region **Treatise on Geomorphology**, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded

dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth s diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

The Indian Rivers Dhruv Sen Singh, 2017-12-30 The book presents geomorphological studies of the major river basins the Indus Ganga

and Brahmaputra and their tributaries Besides major basins the book explores peninsular rivers and other rivers state by state All types of rivers i e snow fed rain fed and groundwater fed rivers are explained together in geological framework Rivers are lifeline and understanding of the rivers their dynamics science and socio economic aspect is very important However different sources provide different data base for rivers But a book which explains all major rivers of a country at a single place was not yet available This book is the first book of its kind in the world which provides expert opinion on all major rivers of a country like India This book complements works in these areas for the last two to three decades on major rivers of India by eminent professors and scientists from different universities IITs and Indian research institutions The information presented in the book would appeal to a wider readership from students teachers to researchers and planners engaged in developmental work and also to common people of the society concerned with awareness about rivers

Coates, 2020-05-11 Whether the project is river engineering soil mapping for land use planning or control of landslides this volume first published in 1976 illustrates that the professional partnership between geomorphology and engineering can significantly minimize environmental damage The papers here were presented at the 7th Binghamton Geomorphology Symposium and using the broad viewpoint of the planner much new ground is covered landfill design prediction of geomorphic processes and their effects and minimization of streamflow distortion *Seismic Geomorphology* R. J. Davies, 2007 We are poised to embark on a new era of discovery in the study of geomorphology The discipline has a long and illustrious history but in recent years an entirely new way of studying landscapes and seascapes has been developed It involves the use of 3D seismic data Just as CAT scans allow medical staff to view our anatomy in 3D seismic data now allows Earth scientists to do what the early geomorphologists could only dream of view tens and hundreds of square kilometres of the Earth's subsurface in 3D and therefore see for the first time how landscapes have evolved through time This volume demonstrates how Earth scientists are starting to use this relatively new tool to study the dynamic evolution of a range of sedimentary environments
