Tectonic Geomorphology Douglas W. Burbank, Robert S. Anderson, 2011-11-02 Tectonic geomorphology is the study of the interplay between tectonic and surface processes that shape the landscape in regions of active deformation and at time scales ranging from days to millions of years Over the past decade recent advances in the quantification of both rates and the physical basis of tectonic and surface processes have underpinned an explosion of new research in the field of tectonic geomorphology Modern tectonic geomorphology is an exceptionally integrative field that utilizes techniques and data derived from studies of geomorphology

seismology geochronology structure geodesy stratigraphy meteorology and Quaternary science While integrating new insights and highlighting controversies from the ten years of research since the 1st edition this 2nd edition of Tectonic Geomorphology reviews the fundamentals of the subject including the nature of faulting and folding the creation and use of geomorphic markers for tracing deformation chronological techniques that are used to date events and quantify rates geodetic techniques for defining recent deformation and paleoseismologic approaches to calibrate past deformation Overall this book focuses on the current understanding of the dynamic interplay between surface processes and active tectonics As it ranges from the timescales of individual earthquakes to the growth and decay of mountain belts this book provides a timely synthesis of modern research for upper level undergraduate and graduate earth science students and for practicing geologists Additional resources for this book can be found at www.wiley.com/go/burbank/geomorphology *Treatise on Geomorphology*, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in

the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

Monitoring and Modelling Dynamic Environments Alan P. Dykes, Mark Mulligan, John Wainwright, 2015-07-17 The Times Obituaries 4 August 2008 reported that John Thornes was one of the most eminent and influential physical geographers of his generation John s keen interest in understanding landform processes and evolution was furthered through a variety of methods and informed across a range of disciplinary boundaries In particular he pushed for better integration of monitoring theoretical and simulation modelling field and laboratory experimentation and remote sensing techniques Although dominated by an interest in the Mediterranean region and problems of land degradation his research activities ranged across a number of time scales and with other environmental perspectives This collection of papers reflects this wide range of John s interests through the recent work of scientists and professionals most strongly influenced by his rigorous training or leadership The thematic focus of the book which runs through all of the main contributions is the integration of different methodologies and the application of this approach to improved understanding of natural systems and the development of appropriate strategies for environmental and resource management Short overviews of John s contributions to geomorphological research are also presented to provide context for the origins of this book

The History of the Study of Landforms or the Development of Geomorphology, Volume 5 T.P. Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co published with British Society for Geomorphology This volume is the fifth in the definitive series The History of the Study of Landforms or the Development of Geomorphology Volume 1 1964 dealt with contributions to the field up to 1890 Volume 2 1973 with the concepts and contributions of William Morris Davis and Volume 3 1991 covered historical and regional themes during the classic period of geomorphology 1890 1950 Volume 4 2008 concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965 by the end of this period process based studies had become dominant Volume 5 builds on this platform covering in detail the revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century It is divided into three sections the first deals with changes in approach and method the second with changes in ideas and the broader scientific context within which geomorphology is studied and the final section details advances in research on processes and landforms The volume s objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty first century geomorphology

Geomorphology of Lake-Catchment Systems Kenji Kashiwaya, 2017-07-24 This book presents the study of limnogeomorphology in which past proxy data such as lacustrine

sediments with information on landform development can be linked to modern observed data acquired by instruments including hydro geomorphological and sedimentary data Traditionally in the field of earth sciences it has been thought that geophysical studies dealing mainly with the present process were not smoothly linked to geological studies that originated from historical studies Although such earth surface process studies are closely related to those on historical landform development in the field of geomorphology they have been studied separately Those two geomorphology studies correspond to process geomorphology dynamic geomorphology and historical geomorphology There have been some attempts to combine them however they lacked past quantitative records available for further analyses In the study of limnogeomorphology proxy data can be converted to quantitative information to be utilized in future environmental discussions This book also covers information not only on large lake catchment systems but on small systems Those include long term and short term and large scale and small scale environmental changes in east Eurasia such as Lake Baikal Lake Khuvsgul Lake Biwa and small lakes in Japan Mongolia China and Korea

Biogeomorphology, Terrestrial and Freshwater Systems C.R. Hupp, Waite Osterkamp, A.D. Howard, 2012-12-02 Biogeomorphology a relatively new term refers to relations between the biota and geomorphic form and process Ecology is the study of organisms in relation to their physical and biotic environment Thus ecogeomorphology could have been an equally acceptable name for this publication which stresses the ecological aspects of the larger field of biology Most of the articles relate vegetation to fluvial geomorphology erosion and sedimentation However articles showing the significance of animal ecological studies and their bearing on geomorphic form and process are also included Geographically the papers range from arid areas in the American Southwest and Israel to the new world tropics Most articles however are concerned with temperate areas of North America and Western Europe This is among the first books to approach the role that biota and ecology play in geomorphic processes and should be on the shelf of every landscape ecologist

Geoarchaeology Carlos Cordova, 2018-08-30 Geoarchaeology is traditionally concerned with reconstructing the environmental aspects of past societies using the methods of the earth sciences The field has been steadily enriched by scholars from a diversity of disciplines and much has happened as the importance of global perspectives on environmental change has emerged Carlos Cordova provides a fully up to date account of geoarchaeology that reflects the important changes that have occurred in the past four decades Innovative features include the development of the human ecological approach and the impact of technology on this approach how the diversity of disciplines contributes to archaeological questions frontiers of archaeology in the deep past particularly the Anthropocene the geoarchaeology of the contemporary past the emerging field of ethno geoarchaeology the role of geoarchaeology in global environmental crises and climate change

Geomorphic Analysis of River Systems Kirstie A. Fryirs, Gary J. Brierley, 2012-09-26 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works

how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at www.wiley.com/go/fryirs

Scientific Bulletin, 1980 **Space and Time in Geomorphology** Taylor & Francis Group, 2021-09-15

This book first published in 1982 is a collection of articles aimed at advancing the field of geomorphology It starts from the position that a meaningful grasp of landscape evolution would depend upon an understanding of the present spatial distribution of processes and process rates comparison of spatial versus temporal change and careful appraisal of the character and composition of the stratigraphic record Each article uses a data set to address between threshold variability in either a spatial or temporal context and often both **Science, Philosophy and Physical Geography** Robert Inkpen, Graham Wilson, 2013-06-26

This accessible and engaging text explores the relationship between philosophy science and physical geography It addresses an imbalance that exists in opinion teaching and to a lesser extent research between a philosophically enriched human geography and a perceived philosophically empty physical geography The text challenges the myth that there is a single self evident scientific method that can and is applied in a straightforward manner by physical geographers It demonstrates the variety of alternative philosophical perspectives and emphasizes the difference that the real world geographical context and the geographer make to the study of environmental phenomenon This includes a consideration of the dynamic relationship between human and physical geography Finally the text demonstrates the relevance of philosophy for both an understanding of published material and for the design and implementation of studies in physical geography This edition has been fully updated with two new chapters on field studies and modelling as well as

greater discussion of ethical issues and forms of explanation The book explores key themes such as reconstructing environmental change species interactions and fluvial geomorphology and is complimented throughout with case studies to illustrate concepts

Modern Geography Gary S. Dunbar, 2016-02-05 This book charts the developments in the discipline of geography from the 1950s to the 1980s examining how geography now connects with urban regional and national planning and impacts on areas such as medicine transport agricultural development and electoral reform The book also discusses how technical and theoretical advancements have generated a renewed sense of philosophic reflection a concern closely linked with the critical examination and development of social theory
