Congress. House. Committee on Science and Technology,1983 **Theory of Geostationary Satellites** Chong-Hung Zee,1989-04-30 Geostationary or equatorial synchronous satellites are a daily reminder of our space efforts during the past two decades The nightly television satellite weather picture the intercontinental telecommunications of television transmissions and telephone conversations and the establishment of educational programs in remote regions on Earth are constant reminders of the presence of these satellites As used here the term geo stationary must be taken loosely because in the long run the satellites will not remain stationary with respect to an Earth fixed reference frame This results from the fact that these satellites as is true for all satellites are incessantly subject to perturbations other than the central body attraction of the Earth Among the more predominant perturbations are the ellipticity of the Earth's equator the Sun and Moon and solar radiation pressure Higher harmonics of the Earth's potential and tidal effects also influence satellite motion but they are of second order when compared to the predominant perturbations This volume deals with the theory of geostationary satellites It consists of seven chapters Chapter 1 provides a general discussion including a brief history of geostationary satellites and their practical applications Chapter 2 describes the Earth's gravitational potential field and the methodology of solving the geostationary satellite problem Chapter 3 treats the effect of Earth's equatorial ellipticity triaxiality on a geostationary satellite Chapter 4 deals with the effects of the Sun and Moon on the satellite's motion while Chapter 5 presents the combined influences of the Sun Moon and solar radiation pressure **SATELLITE COMMUNICATION** K.
