Management in the Frail Elderly Patient and the Oldest Old Andrea Ungar,Niccolò Marchionni,2017-03-14 This book focuses specifically on the management of cardiovascular disease in elderly patients with particular frailties and in the oldest old It is clearly explained how treatment in these patients differs from that in patients in their seventies who respond well to therapies and do not present frailties or organ failures Although not young the latter patients can be treated almost like any other patient according to established guidelines In contrast the frail compromised elderly and the oldest old require specific measures that target their needs including with respect to underlying renal conditions The book considers all those pathologies that have a high prevalence in the general population explaining advanced treatment concepts and all aspects of assessment Key clinical points are highlighted and the text is supplemented with numerous informative figures and tables The authors are respected experts for the most part geriatric physicians and the book is especially addressed to cardiologists who may lack the described targeted information and treatment tools **Cardiovascular Disease in the Elderly** Franz H. Messerli,2013-04-17 After a certain age one is elderly aged venerable and patriarchal Or just plain old When I became old I did not know it I do know it now because of a syndrome of which I had previously been unaware It is quite simple when it hurts it works when it doesn t hurt it doesn t work Writing about the old is a preoccupation of the young and that is as it should be because it is the young who must carry the burden of the old I don t know the average age of the contributors to Franz Messerli s book but I would guess it to be less than 50 which to me is positively pubescent For many years I thought geriatric medicine was nonsense and today I still think some of it is What changes with age are principally the attitude and purposes of the individual and how much energy he or she has to carry out those purposes It isn t so much that the goals ambitions and desire to alter or improve the world disappear they just diminish along with what it takes to accomplish them Which brings me to one particular aspect of aging that is the cardiovascular system The first evidence of the cardiovascular system s aging is the failure of the heart to respond to the demands placed on it **Cardiovascular Disease In The**

Cardiovascular Disease in the Elderly Franz H. Messerli, 2013-12-01 By the time a man gets well into his seventies his continued existence is a mere miracle Robert Louis Stevenson It hardly seems possible that a second edition is needed after the first has been in print for only three years However when I reflect on what has happened in geriatric cardiology during that short period it becomes obvious why First cardiologists all over the globe have begun to realize that geriatric cardiology has evolved into a science and a clinical discipline of its own Although some of us may consider such subspecialization unfortunate it has become clear that a variety of cardiac disorders present with different symptoms and signs require a different diagnostic and therapeutic approach and have a different prognostic outlook in the elderly when compared to middle aged patients Since the aging segment of the population has increased dramatically over the past few decades and continues to do so specific age related disorders are more frequently encountered by the practicing physician be it by the general practitioner by the internist or by a cardiologist Cardiovascular Disease in the Elderly provides an up to date guide to help the physician deal with these problems leading the way in what turns out to be an increasingly complex area

Second I have been heartened by the warm reception of the first edition and by the excellent reviews that it got in the most prestigious medical journals **The American Journal of Geriatric Cardiology**, 1992 *Geriatric Emergency Medicine* Christian Nickel, Abdelouahab Bellou, Simon Conroy, 2017-12-11 This book discusses all important aspects of emergency medicine in older people identifying the particular care needs of this population which all too often remain unmet The up to date and in depth coverage will assist emergency physicians in identifying patients at risk for adverse outcomes in conducting appropriate assessment and in providing timely and adequate care Particular attention is paid to the common pitfalls in emergency management and means of avoiding them Between 1980 and 2013 the number of older patients in emergency departments worldwide doubled Compared with younger patients older people suffer from more comorbidities a higher mortality rate require more complex assessment and diagnostic testing and tend to stay longer in the emergency department This book written by internationally recognized experts in emergency medicine and geriatrics not only presents the state of the art in the care of this population but also underlines the increasing need for adequate training and development in the field *Evidence-Based Geriatric Medicine* Jayna Holroyd-Leduc, Madhuri Reddy, 2012-03-09 The latest addition to the Evidence Based Book series Evidence Based Geriatric Medicine provides non geriatrician clinicians an overview of key topics central to the care of the older patient This guide focuses on the management of common problems in the elderly taking into account their life situations as well as treatment of specific conditions Leading geriatricians with expertise in evidence based medicine utilize the best available evidence and present this information in a concise easy to use question based format Evidence Based Geriatric Medicine is a unique guide to the optimum management of older patients

Cardiovascular Disease in the Elderly Thorsten M. Leucker, Gary Gerstenblith, 2023-01-01 The second edition of this book updates reviews and discusses the latest findings on the pathophysiology diagnosis and management of cardiovascular disease in the older patient It explains the physiological changes associated with the normal aging process that may lead to the development of disease to adverse consequences once disease develops and which alter the risk benefit equation for medical and other interventions designed to diagnose assess and treat cardiovascular disease Chapters address key issues in the management of cardiovascular disease in the elderly including prevention coronary artery disease valvular disease hypertensive disease arrhythmias and interventions Wherever possible the authors take an evidence based approach to recommendations and rely heavily on clinical trials The value of lifestyle changes in the aging population the use of primary and secondary prevention strategies treatments and complications are also discussed Cardiovascular Disease in the Elderly offers physicians and other related providers who care for older patients a gold standard approach to understanding and managing cardiovascular disease in this group *Geriatric Cardiology* William B. Abrams, Edward David Frohlich, 1986

Cardiovascular Disease in the Elderly Gary Gerstenblith, 2007-11-03 A panel of clinicians researchers and leaders in the field review and discuss the latest findings on the pathophysiology diagnosis and management of cardiovascular disease in

the older patient The authors explain the physiological changes associated with the normal aging process that may lead to the development of disease to adverse consequences once disease develops and which alter the risk benefit equation for medical and other interventions designed to diagnose assess and treat cardiovascular disease The focus is on particularly common syndromes in the elderly including cardiac failure with normal ejection fraction isolated systolic hypertension and atrial fibrillation Wherever possible the authors take an evidence based approach to recommendations and rely heavily on prospective clinical trials *Principles of Geriatric Critical Care* Shamsuddin Akhtar, Stanley Rosenbaum, 2018-10-25

Provides coverage of the issues surrounding geriatric critical care emphasising assessment and treatment

Interventional Cardiology in the Elderly Harald Rittger, 2015-10-13 This book provides an in depth review of the current practice in treating elderly patients with coronary artery disease CAD as well as an update of the existing literature It is intended to reflect the current science of elderly patients with stable angina acute coronary syndromes and those patients who are forwarded for CAGB procedures Evidence in the elderly patient group is often limited and or non existent therefore the main challenge even for further research will be to define the role of geriatric preconditions and its impact on outcome A second topic will be to clarify how if ever existing cardiological outcome values like mortality can be applied to elderly patients or if other values like improvement of functional status or quality of life are more suitable parameters to measure interventional success in elderly patients The role of pharmacotherapy in advanced age has to be discussed These topics will be embedded in epidemiological pathophysiological and ethical aspects of interventional treatment of CAD in older age
