Goethe's Botanical Writings Johann Wolfgang von Goethe, Charles J. Engard, Bertha Mueller, 1989 **Goethe's Botanical Writings** Johann Wolfgang von Goethe, 2021-05-25

Much has been written about the golden youth and the Olympian old age of Johann Wolfgang Goethe the poet less has been written however about Goethe the scientist who pursuing independent research in many fields opposed the professional men of his day with brilliant theories of his own The educated world familiar with Faust Werther and Wilhelm Meister is not so generally aware of the scientific achievements of the man who had a genus of plants Goethea and a mineral goethite named for him who coined and first used the word morphology who contributed to the understanding of the physiology of color who rediscovered and described the intermaxillary bone in man propounded the vertebral theory of the skull formulated a concept in botanical morphology that persists to this day who discovered the volcanic origin of a mountain who established the first system of weather stations who made the first systematic classification of minerals and was among the first to use the comparative method in biology and who came unwittingly close to achieving the greatest concept in biology some say the greatest concept in the thinking of man the theory of organic evolution and the descent of man Even in those few cases where subsequent research has proved Goethe's theories to be wrong his supporting accumulation of facts has proved extremely valuable to science Goethe was born at the beginning of a great scientific era But he was a creative thinker his was not the analytic mind that emphasized fine differences but the synthetic mind that sensed the unity behind the differences He was also an ardent lover of nature possessed of unlimited curiosity Consequently as a contemporary observed Whatever Goethe looked upon in nature immediately acquired the character of a living experience for him Most of the material translated in this volume is taken from notes and essays which Goethe published from 1817 to 1824 in journal form Occupying a central position is the most famous and lasting of his scientific writings the essay on the metamorphosis of plants an essay which is today considered one of the minor classics of botany One of the most important episodes in Goethe's life was his flight to Italy where he was delighted by the climate and the luxuriance of the plant life A fan palm in particular attracted his attention because its leaves seemed to exhibit a complete series of transitions from the simple lance shaped first leaves to the most complex fan type At my request Goethe wrote in his diary the gardener cut off an entire sequence of modifications for me and I burdened myself with several pasteboard containers in which to carry these treasures around From this beginning Goethe started to evolve his theory of plant metamorphosis and he returned to Weimar convinced that he had found the secret The literary student will find much to interest him in this translation the poet's own account of his grief and suffering at the hands of misunderstanding friends and his victory over a threatening neurosis Such essays as The History of My Botanical Studies and The Fate of My Manuscript throw much light on the crucial middle period of Goethe's life During Goethe's lifetime and after there was a tendency to ignore his scientific accomplishments in the face of his literary works Many felt that they were almost a crime

against his poetry A few however contended that in science lay the center and focal point of Goethe's mental life Goethe himself toward the end of his life wrote For more than a half century I have been known as a poet in my own country and undoubtedly also abroad or at any rate I have been permitted to pass for one But the fact that I have busily occupied myself with Nature in all her general physical and organic phenomena constantly and passionately pursuing seriously formulated studies this is not so generally known still less has it been accorded any attention Minds like Goethe's Thomas Carlyle said are the common property of all nations and for many reasons all should have correct impressions of them This translation will enable those not familiar with the German language to gain a direct impression of Goethe's mind as expressed in his botanical writings

The Human Soul: Essays in Honor of Nalin Ranasinghe Predrag Cicovacki, 2022-02-01 This collection of essays is dedicated to a recently deceased philosopher and humanist Nalin Ranasinghe His central philosophical and humanistic preoccupation was with the human soul Not surprisingly his greatest inspiration was Socrates credo Care for your soul and the title of his first book was The Soul of Socrates In this and his later writings Ranasinghe expressed his growing concern over the idea that the human soul has been highjacked due to the way our civilization has developed the highest and noblest aspirations of our civilization have been replaced by our obsession with money pleasure and power We now live in a time where we do not know who we are nor who the people around us are Despite all of the technical gadgets connecting us virtually this is the age of disconnect and loneliness as well as of the degradations of humanity Ranasinghe insisted that the two keys for recovery are the self knowledge of the soul and a continuous dialogue with others We need to relearn how to relate to ourselves and others as unique individuals not as objects for the satisfaction of our needs Following his ideas the twenty essays presented here are divided into two parts the soul in reflection and the soul in dialogue The contributors come from various countries around the globe and work in different disciplines and their chapters aim to revive our interest in the soul and the obscured core of our humanity This book will appeal to undergraduate and graduate students of philosophy however the essays are written in a non technical language also making them accessible to the general audience

Relating Religion Jonathan Z. Smith, 2004-11-10 One of the most influential theorists of religion Jonathan Z. Smith is best known for his analyses of religious studies as a discipline and for his advocacy and refinement of comparison as the basis for the history of religions *Relating Religion* gathers seventeen essays four of them never before published that together provide the first broad overview of Smith's thinking since his seminal 1982 book *Imagining Religion* Smith first explains how he was drawn to the study of religion outlines his own theoretical commitments and draws the connections between his thinking and his concerns for general education He then engages several figures and traditions that serve to define his interests within the larger setting of the discipline The essays that follow consider the role of taxonomy and classification in the study of religion the construction of difference and the procedures of generalization and redescription that Smith takes to be key to the comparative enterprise The final essays deploy features of Smith's most recent work especially the notion of translation Healy original and

provocative *Relating Religion* is certain to be hailed as a landmark in the academic study and critical theory of religion

Traces on the Rhodian Shore Clarence J. Glacken, 1967 In the history of Western thought men have persistently asked three questions concerning the habitable earth and their relationships to it From the time of the Greeks to our own answers to these questions have been and are being given so frequently and so continually that we may restate them in the form of general ideas *Catalog of Copyright Entries. Beatrice Fazi, 2018-11-15 In *Contingent Computation* M Beatrice Fazi offers a new theoretical perspective through which we can engage philosophically with computing The book proves that aesthetics is a viable mode of investigating contemporary computational systems It does so by advancing an original conception of computational aesthetics that does not just concern art made by or with computers but rather the modes of being and becoming of computational processes *Contingent Computation* mobilises the philosophies of Gilles Deleuze and Alfred North Whitehead in order to address aesthetics as an ontological study of the generative potential of reality Through a novel philosophical reading of Gödel's incompleteness theorems and of Turing's notion of incomputability Fazi finds this potential at the formal heart of computational systems and argues that computation is a process of determining indeterminacy This indeterminacy which is central to computational systems does not contradict their functionality Instead it drives their very operation albeit in a manner that might not always

fit with the instrumental representational and cognitivist purposes that we have assigned to computing

Otherwise Than the Binary Jessica Elbert Decker, Danielle A. Layne, Monica Vilhauer, 2022-07-01 Otherwise Than the Binary approaches canonical texts and concepts in Ancient Greek philosophy and culture that have traditionally been understood as examples of binary thinking particularly concerning sexual difference In contrast to such patriarchal logic the essays within this volume explore how many of these seemingly strict binaries in ancient culture and thought were far more permeable and philosophically nuanced Each contribution asks if there are ways of thinking of antiquity differently namely to examine canonical works through a lens that expounds and even celebrates philosophies of difference so as to discover instances where authors of antiquity valorize and uphold the necessity of what has been seen as feminine foreign and or irrational As contemporary thinkers turn toward new ways of reading antiquity these selected studies will inspire other readings of ancient texts through new feminist methodologies and critical vantage points When examining the philosophers and notable figures of antiquity alongside their overt patriarchal and masculinist agendas readers are invited to rethink their current biases while also questioning how particular ideas and texts are received and read

With Respect for Nature J. Claude Evans, 2012-02-01 We eat inevitably at the expense of other living creatures How can we take the lives of plants and animals while maintaining a proper respect for both ecosystems and the individuals who live in them including ourselves In this book philosopher J Claude Evans challenges much of the accepted wisdom in environmental ethics and argues that human participation in the natural cycles of life and death can have positive moral value With a guide for the nonphilosophical reader and set against the background of careful and penetrating critiques of Albert Schweitzer's principle of reverence for life and Paul Taylor's philosophy of respect for nature Evans uses hunting and catch and release fishing as test cases in calling for a robust sense of membership in the natural world The result is an approachable existential philosophy that emphasizes the positive value of human involvement in natural processes in which life and death giving and receiving self and other are intertwined

The Natural Philosophy of Plant Form Agnes Arber, 1970 First published in 1950 this monograph on the morphology of flowering plants explores the relationship between philosophy and botany

Kant's Organicism Jennifer Mensch, 2013-06-01 A striking and radical rereading of Kant's first Critique through the concept of epigenesis Mensch's reading is bold and innovative Radical Philosophy The towering achievement of Immanuel Kant's Critique of Pure Reason has long overshadowed his other interests in natural history and the life sciences which were considered separate from his theoretical philosophy until now In Kant's Organicism Jennifer Mensch draws a crucial link between these spheres by showing how the concept of epigenesis a radical theory of biological formation lies at the heart of Kant's conception of reason As Mensch argues epigenesis was not simply a metaphor for Kant but centrally guided his critical philosophy especially the relationship between reason and the categories of the understanding Offsetting a study of Kant's highly technical theory of cognition with a mixture of intellectual history and biography Mensch situates the

epigenesis of reason within broader investigations into theories of generation genealogy and classification and against later writers and thinkers such as Goethe and Darwin Distilling vast amounts of research into a concise and accessible book Mensch offers one of the most refreshing looks not only at Kant's famous first Critique but at the history of philosophy and the life sciences as well **Gaither's Dictionary of Scientific Quotations** Carl C. Wilson,2024 Economics has a problem the discipline cannot distinguish the causes of human action from the consequences of human action Economists deal with matters of fact not with feelings and morals They model representations of optimal agents not flesh and blood human beings in ordinary life By assuming that incentives and self interest are sufficient to explain economic activity economic science proceeds as if the human mind does not matter But the origins of our actions ideas do indeed matter They make us human In Meaningful Economics Bart J Wilson challenges economics to directly engage human beings as we really are not as economists ideally assume Wilson argues that economic science is as much about purposes and human values as it is about incentives Moreover he shows how the outcomes of our decisions costs and benefits and the origins of our decisions motives and goals can be understood in an integrated way Over the course of the book Wilson develops a framework that connects the origins of human action to the outcomes of human action explaining human conduct with causes and effects He then shows how three basic principles of economics trade specialization and property require meaning values and purpose With a

fresh perspective and a novel theoretical framework that bridges economics and ethics Meaningful Economics explains the roots of human conduct and its economic effects by grounding a science of economics in the moral sentiments that prompt human beings to act
