Spin Glass Theory And Far Beyond: Replica Symmetry Breaking After 40 Years Patrick Charbonneau, Enzo Marinari, Giorgio Parisi, Federico Ricci-terseghi, Gabriele Sicuro, Francesco Zamponi, Marc Mezard, 2023-07-26 About sixty years ago the anomalous magnetic response of certain magnetic alloys drew the attention of theoretical physicists It soon became clear that understanding these systems now called spin glasses would give rise to a new branch of statistical physics As physical materials spin glasses were found to be as useless as they were exotic They have nevertheless been recognized as paradigmatic examples of complex systems with applications to problems as diverse as neural networks amorphous solids biological molecules social and economic interactions information theory and constraint satisfaction problems This book presents an encyclopaedic overview of the broad range of these applications More than 30 contributions are compiled written by many of the leading researchers who have contributed to these developments over the last few decades Some timely and cutting edge applications are also discussed This collection serves well as an introduction and summary of disordered and glassy systems for advanced undergraduates graduate students and practitioners interested in the topic

Taking a hands-on approach: Current perspectives on the effect of hand position on vision Philip Tseng,

Christopher Davoli, 2015-10-05 An exciting new line of research that investigates the impact of one's own hands on visual processing has flourished in the past several years. Specifically, several studies have demonstrated that objects near the hands receive prioritized attention, enhanced perceptual sensitivity, altered figure-ground assignment, prolonged and detail-oriented processing, and improved visual working memory. Taken together, these results demonstrate that the visual system reveals a new pattern of processing when one's hands are in proximity of viewed objects. Therefore, the vast majority of studies on visual processing in which one's hands are kept away from the stimuli may constitute but one side of a more complex story of the inner workings of the visual system. With several consistent behavioral demonstrations of hand-altered vision now in the literature, the present challenge facing this growing field and the aim of this Research Topic is four-pronged: 1. Isolate and elucidate the underlying cognitive and neural mechanisms of hand-altered vision; 2. Map the parameters and conditions of hand nearness that permit, prevent the onset or maintenance of hand-altered vision; 3. Determine the consequences of hand-altered vision for higher-level cognition and assess its applied potential, e.g., as a neuropsychological intervention; and 4. Present a cohesive and predictive theoretical account of hand-altered vision. We welcome submissions that fit into any one or a combination of the above domains. For behavioral research, we particularly encourage submissions that are relevant to the advancement of our understanding of the neural mechanisms of hand-altered vision, e.g., demonstrations that might corroborate or disconfirm proposed neural systems. **Nature**, 1883 [Hands-On Science and Technology, Grade 6](#)

Jennifer Lawson, 2008-11-17 This teacher resource offers a detailed introduction to the Hands On Science and Technology program, guiding principles, implementation guidelines, an overview of the science skills that grade 6 students use and develop, and a classroom assessment plan complete with record-keeping templates. It also includes connections to the Achievement Levels as outlined in The Ontario Curriculum Grades 1-8 Science and Technology 2007. This resource has four instructional units: Unit 1 Biodiversity, Unit 2 Flight, Unit 3 Electricity and Electrical Devices, Unit 4 Space. Each unit is divided into lessons that focus on specific curricular expectations. Each lesson has curriculum expectation(s), lists materials, lists activity descriptions, assessment suggestions, activity sheets, and graphic organizers. **Spatial Prepositions**

Claude Vandeloise, 1991-10-08 This striking study of the meaning and use of the major spatial prepositions in French provides valuable insight into how the human mind organizes spatial relationships. Most previous analyses of spatial prepositions have assumed that their semantic properties can be adequately explained by familiar logical and geometrical concepts. Thus, the standard view of the preposition *in* as it appears in the sentence *the ball is in the bag* postulates that it refers to the geometrical relation of inclusion. This paradigm, however, falters when faced with the contrast in acceptability between sentences such as *the bulb is in the socket* and *the bottle is in the cap*. The force exerted by the landmark, a conceptually fixed object on the target, a moveable object, is crucial in this difference: the functional notion of containment seems more operational in the use of the preposition *in* than inclusion. That is, what are taken to be the landmark and the target depend

greatly on the functions these objects serve in the human scheme This offers important clues to otherwise problematic linguistic quirks such as why one sleeps in one's bed while one is said to lie on one's deathbed While many of the examples apply in English as well as French there are some noteworthy differences in French one sits on a chair but in a couch Vandeloise convincingly argues that it is precisely this subjective element which makes a standard geometrical account unfeasible Internet Equity and Education Act of 2001 United States.
