## Fast Reactions:

**The Mechanisms of Fast Reactions in Solution** Edward Caldin, 2001 Published a few years after the author's death this volume is a sequel to his 1964 book *Fast Reactions in Solution* the material is entirely new extending investigation beyond now well established fast reaction techniques to consider their contribution to understanding events on the molecular scale After an introductory chapter on origins methods mechanisms and rate constants coverage includes the rates of diffusion controlled reactions mathematical theory of diffusion flash photolysis techniques fluorescence quenching Marcus theory involving proton transfer and group transfer reactions in solutions and electron transfer reactions Annotation copyrighted by Book News Inc Portland OR

**Physical Chemistry of Fast Reactions** B. Levitt, 2012-12-06 The chapters in this book are devoted to the elementary reactions of small molecules in the gas phase with some emphasis on reactions important in combustion The first three chapters cover experimental measurements made at high temperatures mainly using shock waves and flames the final chapter describes discharge flow methods near room temperature The authors all active in the fields they describe were asked to aim at a level intermediate between a textbook and a review designed for readers not already familiar with this branch of chemical kinetics We hope the book will prove especially useful to research workers in related subjects to research students and perhaps as source material for the preparation of lectures The examples have been chosen to illustrate the theoretical basis of the topics rather than attempt a complete coverage Professors Wagner and Troe describe the remarkable progress made in recent years in measuring dissociation rates for small molecules Tests of unimolecular reaction theories are usually made in the fall off region of pressure the kinetics change from first order to second order as the pressure is reduced For large molecules this region lies below atmospheric pressure and is relatively easily accessible For molecules with four or less atoms however the fall off region lies well above atmospheric pressure it has been explored using the high pressure shock tube techniques developed by the authors

**Techniques and Applications of Fast Reactions in Solution** W.J. Gettins,E. Wyn-Jones,2012-12-06 As a result of the pioneering efforts of Eigen de Maeyer Norrish and Porter the kinetics of fast reactions in solution can now be studied using chemical relaxation methods as well as many other fast reactions techniques These methods have been applied successfully in many branches of the natural sciences The simultaneous growth in the number of investiga tors and the diversity of their research interests has inevitably led to communication problems The purpose of the NATO Advanced Study Institute entitled New Applications of Chemical Relaxation Spectrometry and Other Fast Reaction Methods in Solution was to create a forum so that research scientists working in different areas concerned with fast reactions could interact This meeting was held at the Llandinam Building University College of Wales Aberystwyth from September 10th 20th 1978 In addition to lectures on techniques and theory two days of the NATO Advanced Study Institute were spent discussing the current state of the art in this field This two day meeting was also run under the auspices of the Chemical Society Fast Reactions in Solution Group The papers in this volume are the result of the contribu tions given in the Aberystwyth meeting We have attempted to make this volume useful for the non expert and a comprehensive introduction to theory as well as the instrumentation used in the studies are discussed in detail

**Fast Reactions in Energetic Systems** Christos Capellos,R.F. Walker,2012-12-06 This book presents the formal lectures and contributed papers given at the NATO Advanced Study Institute on Fast Reactions in Energetic Systems which took place in Preveza Greece during the period 6 19 July 1980 The material describes experimental observations and the more advanced theoretical aspects of certain types of fast reactions and energy or charge transfer processes which are usually complete 6 12 in periods of 10 10 seconds Furthermore it discusses the role of macroscopic and molecular processes in the ignition combustion deflagration and detonation of solid liquid and gaseous chemical systems Various papers deal with the ability of molecules to absorb and transmit the different forms of energy provided by shock light thermal or electron pulses and to contribute to the propagation of reactions under high temperatures and pressures The role of energy pumped or transferred to electronic or vibrational states is discussed in terms of excitation ionization bond scission and the formation of free radicals The dynamics and reactivity of ionic species electronically and vibrationally excited states and free radicals are described for various gaseous liquid and solid systems The proceedings include presentations of theoretical and experimental techniques to describe and observe the phenomena
