The Scientific Case Against Scientific Creationism

Jon P. Alston, 2003-09 Sociologist Jon P.

Alston offers a unique and clear analysis of the weaknesses of scientific creationism and intelligent design by identifying what creationists say when they reject evidence for evolution. He demonstrates how scientific creationists accept non-scientific statements that contradict established scientific knowledge. Acceptance of anti-evolutionary knowledge also demands acceptance of a literal six-day creation and other statements contradicting scientific findings. Few persons have read so closely the writings of scientific creationists to illustrate how anti-scientific anti-evolutionists become when they criticize the fact of evolution. Creationists are forced to develop just-so stories to defend their literal interpretations of Biblical scripture. Alston finds creationists cannot defend their religious beliefs using established scientific methodologies and principles.

Mapping Our Ancestors

Carl P. Lipo, 2017 Much of what we are comes from our ancestors. Through cultural and biological inheritance mechanisms, our genetic composition, instructions for constructing artifacts, the structure and content of languages, and rules for behavior are passed from parents to children and from individual to individual. *Mapping Our Ancestors* demonstrates how various genealogical or phylogenetic methods can be used both to answer questions about human history and to build evolutionary explanations for the shape of history. Anthropologists are increasingly turning to quantitative phylogenetic methods. These methods depend on the transmission of information regardless of mode and as such are applicable to many anthropological questions. In this way, phylogenetic approaches have the potential for building bridges among the various subdisciplines of anthropology, an exciting prospect indeed. The structure of *Mapping Our Ancestors* reflects the editors' goal of developing a common understanding of the methods and conditions under which ancestral relations can be derived in a range of data classes of interest to anthropologists. Specifically, this volume explores the degree to which patterns of ancestry can be determined from artifactual, genetic, linguistic, and behavioral data and how processes such as selection, transmission, and geography impact the results of phylogenetic analyses. *Mapping Our Ancestors* provides a solid demonstration of the potential of phylogenetic methods for studying the evolutionary history of human populations using a variety of data sources and thus helps explain how cultural, material, language, and biology came to be as they are. Carl P. Lipo is assistant professor of anthropology at California State University in Long Beach. Michael O'Brien is professor of anthropology and director of the Museum of Anthropology at the University of Missouri. Mark Collard is assistant professor of anthropology at the University of British Columbia. Stephen J. Shennan is a professor and director of the Institute of Archaeology at the University College London. Niles Eldredge is a curator in the department of invertebrates at the American Museum of Natural History and adjunct professor at the City University of New York.
