The Routledge Handbook of the Political Economy of Science David Tyfield, Rebecca Lave, Samuel Randalls, Charles Thorpe, 2017-04-28 The political economy of research and innovation R I is one of the central issues of the early twenty first century Science and innovation are increasingly tasked with driving and reshaping a troubled global economy while also tackling multiple overlapping global challenges such as climate change or food security global pandemics or energy security But responding to these demands is made more complicated because R I themselves are changing Today new global patterns of R I are transforming the very structures institutions and processes of science and innovation and with it their claims about desirable futures Our understanding of R I needs to change accordingly Responding to this new urgency and uncertainty this handbook presents a pioneering selection of the growing body of literature that has emerged in recent years at the intersection of science and technology studies and political economy The central task for this research has been to expose important but consequential misconceptions about the political economy of R I and to build more insightful approaches This volume therefore explores the complex interrelations between R I both in general and in specific fields and political economies across a number of key dimensions from health to environment and universities to the military The Routledge Handbook of the Political Economy of Science offers a unique collection of texts across a range of issues in this burgeoning and important field from a global selection of top scholars The handbook is essential reading for students interested in the political economy of science technology and innovation It also presents succinct and insightful summaries of the state of the art for more advanced scholars

A History of Technoscience David F. Channell, 2017-06-14 Are science and technology independent of one another Is technology dependent upon science and if so how is it dependent Is science dependent upon technology and if so how is it dependent Or are science and technology becoming so interdependent that the line dividing them has become totally erased This book charts the history of technoscience from the late nineteenth century to the end of the twentieth century and shows how the military industrial academic complex and big science combined to create new examples of technoscience in such areas as the nuclear arms race the space race the digital age and the new worlds of nanotechnology and biotechnology

Scientists, Business, and the State, 1890-1960 Patrick J. McGrath, 2003-01-14 In the late nineteenth century scientists began allying themselves with America s corporate political and military elites They did so not just to improve their professional standing and win more money for research says Patrick McGrath but for political reasons as well

They wanted to use their new institutional connections to effect a transformation of American political culture. They succeeded but not in ways that all scientists envisioned or agreed upon. McGrath describes how between 1890 and 1960 scientific business and political leaders together forged a new definition of American democracy in which science and technology were presented to the public as crucial ingredients of the nation's progress, prosperity and political stability. But as scientists became more prominent they provoked conflicts among themselves as well as with their institutional patrons over exactly how their expertise should be used. McGrath examines the bitter battles that erupted over the role scientists should play during the Great Depression, World War II, the Cold War arms race and the security and loyalty investigations of the 1950s. He finds that by the end of the 1950s scientists were regarded by the political and military elite not as partners but as subordinate technicians who were expected to supply weapons on demand for the Cold War state.

The Train and the Telegraph Benjamin Sidney Michael Schwantes, 2019-08-06. A challenge to the long held notion of close ties between the railroad and telegraph industries of the nineteenth century. To many people in the nineteenth century the railroad and the telegraph were powerful transformative forces, ones that seemed to work closely together to shape the economy, society and politics of the United States. However, the perception, both popular and scholarly, of the intrinsic connections between these two institutions has largely obscured a far more complex and contested relationship, one that created profound divisions between entrepreneurial telegraph promoters and warier railroad managers. In *The Train and the Telegraph* Benjamin Sidney Michael Schwantes argues that uncertainty, mutual suspicion and cautious experimentation more aptly describe how railroad officials and telegraph entrepreneurs hesitantly established a business and technical relationship. The two industries, Schwantes reveals, were drawn together gradually through external factors such as war, state and federal safety regulations and financial necessity, rather than because of any perception that the two industries were naturally related or beneficial to each other. Complicating the existing scholarship by demonstrating that the railroad and telegraph in the United States were uneasy partners at best and more often outright antagonists throughout the nineteenth and early twentieth centuries, *The Train and the Telegraph* will appeal to scholars of communication, transportation and American business history and political economy as well as to enthusiasts of the nineteenth century American railroad industry.

A New History of Management Stephen Cummings, Todd Bridgman, John Hassard, Michael Rowlinson, 2017-09-19. Existing narratives about how we should organize are built upon and reinforce a concept of good management derived from what is assumed to be a fundamental need to increase efficiency. But this assumption is based on a presentist, monocultural and generally limited view of management's past. *A New History of Management* disputes these foundations. By reassessing conventional perspectives on past

management theories and providing a new critical outline of present day management it highlights alternative conceptions of good management focused on ethical aims sustainability and alternative views of good practice From this new historical perspective existing assumptions can be countered and simplistic views disputed offering a platform from which graduate students researchers and reflective practitioners can develop alternative approaches for managing and organizing in the twenty first century
