information on aerial vehicles and their possible roles in revolutionizing agricultural procedures through spectral analysis of
terrains soils crops water resources diseases floods drought and farm activities There are several semi autonomous and
autonomous robotic aerial vehicles that are examined for their efficiency in offering detailed spectral data about agrarian
regions and individual farms Among them small drone aircrafts such as fixed winged and copter models have already caught
the imagination of farmers They are spreading fast in every nook and corner of the farm world However there are many more
aerial robots that are utilized in greater detail during farming In this volume the focus is on aerial vehicles such as parafoils
blimps aerostats and kites and how they are being evaluated for use in experimental farms and fields A few aerial vehicles
such as robotic parafoils have been adopted to procure aerial spectral data and visual imagery to aid agronomic procedures
These and other aerial robots are expected to change and improve the use of the sky in agricultural endeavors and the way
we conduct agronomic procedures in the very near future This volume is a timely resource for agricultural researchers
