From A Far Field:

Back from the Far Field Bernard W. Quetchenbach, 2000 Many poets writing after World War II have found the individual focus of contemporary poetics poorly suited to making statements directed at public issues and public ethics The desire to invest such individualized poetry with greater cultural authority presented difficulties for Vietnam protest poets for example and it has been a particular challenge for nature writers in the Thoreau tradition who have attempted to serve as advocates for the natural world Examining the implications of this dilemma Bernard W Quetchenbach locates the poets Robert Bly Gary Snyder and Wendell Berry within two traditions the American nature writing tradition and the newer tradition of contemporary poetics He compares the work of two other twentieth century poets Robinson Jeffers and Theodore Roethke to illustrate how the contemporary shift toward a poetics focused on the poet's life has affected portrayals of nature and the public voice in poetry Turning back to the work of Bly Snyder and Berry Quetchenbach assesses their attempts to reinvent the public voice in the context of contemporary poetics and what effect these attempts have had on their work He argues that these poets have learned from their postwar generation techniques for adapting a personalized poetics to environmental advocacy In addition to modifying what critics have called the poetics of immediacy these poets have augmented their poetic output with prose and identified themselves with long standing traditions of poetic ethical and spiritual authority In doing so Bly Snyder and Berry have attempted to solve not only a problem inherent in contemporary poetics but also the larger problem of the role of the poet in a society that does not recognize poetry While it would be an overstatement to suggest that these three figures have found a place for the poet in American life they have reached audiences that extend beyond traditional readers of poetry At the end of the twentieth century Quetchenbach concludes poets have begun to identify and direct their writing to specific audiences defined less by aesthetic preferences and more by a shared interest in and dedication to the work's subject matter Whether revealing a disturbing trend for poetry or an encouraging one for environmentalism and other political causes it is one of many provocative conclusions Quetchenbach draws from his examination of postwar nature poetry

Foundations of Antenna Engineering: A Unified Approach for Line-of-Sight and Multipath Per-Simon Kildal, 2015-06-01 This is the first textbook that contains a holistic treatment of antennas both for traditional antennas mounted on masts Line of Sight antenna systems and for small antennas used on modern wireless devices such as smart phones being subject to signal variations fading due to multipath propagation The focus is on characterization as well as describing classical antennas by modern complex vector theory thereby linking together many disciplines such as electromagnetic theory classical antenna theory wave propagation and antenna system performance Overall this book represents a rethinking of the way basic antenna theory is presented The book contains many references to important old and new papers and books on the analysis and design of the most useful antenna types for the most interested readers

National Advisory Committee for Aeronautics, 1958 *Flutter Analysis of Rectangular Wings of Very Low Aspect Ratio* Robert William Fralich, John M. Hedgepeth, 1958 A flutter analysis employing slender body aerodynamic theory and thin plate theory is made for rectangular wings of very low aspect ratio with a constant thickness The spanwise variation of wing deflection is assumed to be given by a parabola and the chordwise variation is allowed complete freedom The results show the variation of flutter speed and mode shape with aspect ratio Comparisons are made with additional results obtained by approximating the chordwise deflection shape by use of parabolic or cubic curves The analysis shows that the cubic approximation gives good results for a ratio of chord to semispan less than 3
