PAUL HORWICH

From A Deflationary Point Of View

From A Deflationary Point Of View:

From a Deflationary Point of View Paul Horwich, 2005-02-10 Deflationism has emerged as one of the most significant developments in contemporary philosophy. It is best known as a story about truth roughly that the traditional search for its underlying nature is misconceived since there can be no such thing. However, the scope of deflationism extends well beyond that particular topic. For in the first place, such a view of truth substantially affects what we should say about neighboring concepts such as reality, meaning, and rationality. And in the second place, the anti-theoretical meta-philosophy that lies behind that view, the idea that philosophical problems are characteristically based on confusion and should therefore be dissolved rather than solved, may fruitfully be applied throughout the subject in epistemology, ethics, the philosophy of science, metaphysics, and so on. The essays reprinted here were written over the last twenty-five years. They represent Paul Horwich's development of the deflationary perspective and demonstrate its considerable power and fertility. They concern a broad array of philosophical problems: the nature of truth, realism vs. anti-realism, the creation of meaning, epistemic rationality, the conceptual role of ought, probabilistic models of scientific reasoning, the autonomy of art, the passage of time, and the trajectory of Wittgenstein's philosophy. They appear as originally published except for the correction of obvious mistakes, the interpolation of clarifying material, and the inclusion of new footnotes to indicate Horwich's subsequent directions of thought.

New Frontiers in Truth Fabio Bacchini, Massimo Dell'Utri, 2015-01-12 Although philosophers have been concerned with truth since at least the age of Plato, the last thirty years have witnessed a veritable explosion of the philosophical debate on this topic. The touchpaper which lit the fuse for this was undoubtedly the Deflationist Renaissance half a century after the seminal work of F. P. Ramsey due in the Seventies both to the Quinean disquotational interpretation of the Tarskian truth definitions and to the development of the prosentential theory of truth by D. Grover, J. Kamp, and N. Belnap, and from the second half of the Eighties onwards to the forceful defences of deflationary conceptions provided by H. Field and P. Horwich. The philosophical struggle on deflationism has been thought provoking by arguing on the merits and shortcomings of such a conception; philosophers have come to broaden and deepen the discussion on truth beyond the boundaries of deflationism. The varieties of problems tackled by the essays in this book highlight how the land of Truth is still far from having been totally explored and how in this intellectual endeavour real progresses can be achieved. [The Growing-Block View](#) Graeme Forbes, 2025-05-15 What makes time interesting and what is time? Graeme A. Forbes presents a robust defence of the metaphysical asymmetry between past and future, providing a compelling argument for the acceptance of the Growing Block view. Taking us from the armchair to philosophy of physics and then out to the human world, Forbes considers the ontological questions that have been the focus of most of the literature on the metaphysics of time. Across three parts, he addresses questions central to the philosophy of time. Part I asks why we should think that time does something that space does not. Part II examines why we should think that the past differs in some metaphysically interesting way from the future, and Part III

shows why we should accept the Growing Block view the view on which the past exists the future doesn't and the passage of time is causation bringing about events in accordance with the laws of nature This wide ranging and engaging exploration of persistence experience agency and more makes a radical contribution to our understanding of the philosophy of time

Modes of Truth Carlo Nicolai, Johannes Stern, 2021-03-30 The aim of this volume is to open up new perspectives and to raise new research questions about a unified approach to truth modalities and propositional attitudes The volume's essays are grouped thematically around different research questions The first theme concerns the tension between the theoretical role of the truth predicate in semantics and its expressive function in language The second theme of the volume concerns the interaction of truth with modal and doxastic notions The third theme covers higher order solutions to the semantic and modal paradoxes providing an alternative to first order solutions embraced in the first two themes This book will be of interest to researchers working in epistemology logic philosophy of logic philosophy of language philosophy of mathematics and semantics The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

In Defense of Deflation Philipp Bagus, 2014-12-26 This book analyses the causes and consequences of deflation In contrast to the widespread belief that deflation would be harmful to the economy as a whole the author argues that free market deflation is liberating and beneficial Several myths of deflation are exposed and the reasons for the widespread deflation phobia that serves to justify expansionary monetary policy i.e. inflation are investigated Two historical case studies the growth deflation in the US after the Civil War and the bank credit deflation in Germany during the Great Depression are discussed to illustrate the points made in the theoretical analysis of deflation

The ^AMoon Points Back Koji Tanaka, Yasuo Deguchi, Jay L. Garfield, Graham Priest, 2015-07-01 The Moon Points Back investigates central areas of Buddhist philosophy most importantly the notion of emptiness sunyata using the techniques of contemporary analytic philosophy and logic The volume's approach allows for novel understandings and insights of these areas showing how Buddhist philosophers can engage with debates in contemporary Western philosophy

Metasemantics Alexis Burgess, Brett Sherman, 2014-10-30 Metasemantics comprises new work on the philosophical foundations of linguistic semantics by a diverse group of established and emerging experts in the philosophy of language metaphysics and the theory of content The science of semantics aspires to systematically specify the meanings of linguistic expressions in context The paradigmatic metasemantic question is accordingly what more basic or fundamental features of the world metaphysically determine these semantic facts Efforts to answer this question inevitably raise others Where are the boundaries of semantics What is the essence of the meaning relation Which framework should we use for semantic theorizing What are the intrinsic natures of semantic values Are the semantic facts metaphysically determinate What is semantic competence Metasemantic inquiry has long been recognized as a central part of the philosophy of language but recent developments in metaphysics and semantics itself now allow us to approach these classic questions

with an unprecedented degree of precision The essays collected here provide promising new perspectives on old problems pose questions that suggest novel research projects and taken together greatly sharpen our understanding of linguistic representation

The Metaphysics of Truth Douglas Edwards, 2018-05-31 What is truth What role does truth play in the connections between language and the world What is the relationship between truth and being The Metaphysics of Truth tackles these fundamental philosophical questions and proposes a distinctive metaphysical worldview Douglas Edwards develops a detailed pluralist theory which holds that there are different relationships between language and the world in different subject areas or domains He explains what domains are how different domains are individuated which metaphysical frameworks apply in different domains and how a pluralist view of truth plays a key role The connections between truth and being are explored yielding a form of ontological pluralism the idea that there are different ways of being which increases the explanatory power of the view This project is carried out in a climate where the traditionally central issue of the nature of truth has diminished in significance due to the rise of deflationary and primitivist views which deny that there are interesting and informative things to say about truth Edwards responds to these views and demonstrates the importance of the metaphysics of truth with regard to both the study of truth itself and metaphysical debates more generally Moreover Edwards pays particular attention to domains which have not been given much consideration in debates about truth namely the institutional and social domains and connects work on the metaphysics of truth and being to key issues in social construction

From Logic to Practice Gabriele Lolli, Marco Panza, Giorgio Venturi, 2014-11-28 This book brings together young researchers from a variety of fields within mathematics philosophy and logic It discusses questions that arise in their work as well as themes and reactions that appear to be similar in different contexts The book shows that a fairly intensive activity in the philosophy of mathematics is underway due on the one hand to the disillusionment with respect to traditional answers on the other to exciting new features of present day mathematics The book explains how the problem of applicability once again plays a central role in the development of mathematics It examines how new languages different from the logical ones mostly figural are recognized as valid and experimented with and how unifying concepts structure category set are in competition for those who look at this form of unification It further shows that traditional philosophies such as constructivism while still lively are no longer only philosophies but guidelines for research Finally the book demonstrates that the search for and validation of new axioms is analyzed with a blend of mathematical historical philosophical psychological considerations

Use Against Scepticism Massimiliano Vignolo, 2009-10-02 What place is left for semantic notions There are three main positions in response to that question eliminativism physicalism and semanticalism This book argues in favour of a version of semanticalism That version of semanticalism does not make semantic notions mysterious as if they are added from outside the realm of nature as is the case with the Cartesian conception of mental properties Semantic properties are treated as emergent properties reference to which serves to play a normative role in the account of the nature of linguistic expressions

The need for positing semantic properties stems from the fact that the best explanation of the nature of linguistic expressions as guides to reality to inform and to learn about the states of the world invokes semantic properties. It consists in endowing linguistic expressions with semantic properties that correlate them to things and states of the world. Semantics then should be kept distinct from the theory of meaning. We need the theory of meaning for giving an account of linguistic competence in order to explain speakers' linguistic behaviour but we need semantics in order to explain the nature of the objects produced by the behavioural output of linguistic competence. Consider a speaker who reads the sentence 'it will be sunny and warm tomorrow' on the weather forecast page of the newspaper. We do not need to model his understanding as if he knew the semantic properties of the expressions occurring in that sentence. Rather we need to invoke the semantic properties of that sentence and of its constituents in order to explain the social practice of uttering and writing it to inform people about weather conditions. This book argues that liberal naturalists are entitled to endorse the same attitude towards semantic properties as W. V. O. Quine's towards mathematical entities. We ought to accept semantic properties since our best theory of the world makes reference to them. The metaphysical principle of the supervenience of semantic properties over naturalistic properties though unexplained is justified to the extent that it too belongs to our best overall theory of the world which as a whole faces the tribunal of experience.

German Idealism Espen Hammer, 2007-08-07 This outstanding collection of specially commissioned chapters examines German idealism from several angles and assesses the renewed interest in the subject from a wide range of fields. Including discussions of the key representatives of German idealism such as Kant, Fichte and Hegel, it is structured in clear sections dealing with metaphysics, the legacy of Hegel's philosophy, Brandom and Hegel, recognition and agency, autonomy and nature, the philosophy of German romanticism. Amongst other important topics, *German Idealism: Historical and Philosophical Perspectives* addresses the debates surrounding the metaphysical and epistemological legacy of German idealism, its importance for understanding recent debates in moral and political thought, its appropriation in recent theories of language and the relationship between mind and world, and how German idealism affected subsequent movements such as romanticism, pragmatism and critical theory. Contributors: Espen Hammer, Stephen Houlgate, Sebastian Gardner, Paul Redding, Andrew Bowie, Richard Eldridge, Jay Bernstein, Frederick Beiser, Paul Franks, Robert Pippin, Fred Rush, Manfred Frank, Terry Pinkard, Robert Stern.

Meaning Paul Horwich, 1998-12-03 What is meaning? Paul Horwich presents an original philosophical theory, demonstrates its richness, and defends it against all comers. At the core of his theory is the idea made famous by Wittgenstein that the meaning of a word derives from its use. Horwich articulates this idea in a new way that will restore it to the prominence that it deserves. He surveys the diversity of valuable insights into meaning that have been gained in the twentieth century and seeks to accommodate them within his theory. His aim is not to correct a common sense view of meaning but to vindicate it; he seeks to take the mystery out of meaning. Horwich's 1990 book *Truth* established itself both as the definitive exposition and defence of a notable philosophical theory, minimalism, and as a stimulating

straightforward introduction to philosophical debate about truth Meaning now gives the broader context in which the theory of truth operates and is published simultaneously with a revised edition of Truth in which Horwich refines and develops his treatment of the subject in the light of subsequent discussions while preserving the distinctive format which made the book so successful The two books together present a compelling view of the relations between language thought and reality They will be essential reading for all philosophers of language

Morality and Socially Constructed Norms Laura Valentini,2023 Every day we face rules of behaviour imposed upon us by norms that happen to be generally accepted in our environment Laura Valentini illuminates this aspect of our lives by offering an account of when we are morally bound by socially constructed norms and when we should instead disregard them

Charles Taylor Ruth Abbey,2004-01-26 Charles Taylor is a distinctive figures in contemporary philosophy In a time of increasing specialization Taylor contributes to areas of philosophical conversation across a wide spectrum of ideas including moral theory theories of subjectivity political theory epistemology hermeneutics philosophy of mind philosophy of language and aesthetics His most recent writings have seen him branching into the study of religion Written by a team of international authorities this collection will be read primarily by students and professionals in philosophy political science religious studies but will appeal to a broad swathe of professionals across the humanities and social sciences

Truth and the Absence of Fact Hartry Field,2001-03-01 Hartry Field presents a selection of thirteen essays on a set of related topics at the foundations of philosophy one essay is previously unpublished and eight are accompanied by substantial new postscripts Five of the essays are primarily about truth meaning and propositional attitudes five are primarily about semantic indeterminacy and other kinds of factual defectiveness in our discourse and three are primarily about issues concerning objectivity especially in mathematics and in epistemology The essays on truth meaning and the attitudes show a development from a form of correspondence theory of truth and meaning to a more deflationist perspective The next set of papers argue that a place must be made in semantics for the idea that there are questions about which there is no fact of the matter and address the difficulties involved in making sense of this both within a correspondence theory of truth and meaning and within a deflationary theory Two papers argue that there are questions in mathematics about which there is no fact of the matter and draw out implications of this for the nature of mathematics And the final paper argues for a view of epistemology in which it is not a purely fact stating enterprise This influential work by a key figure in contemporary philosophy will reward the attention of any philosopher interested in language epistemology or mathematics
