From Chance to Choice Allen Buchanan, Dan W. Brock, 2000 This book written by four internationally renowned bioethicists and first published in 2000 was the first systematic treatment of the fundamental ethical issues underlying the application of genetic technologies to human beings Probing the implications of the remarkable advances in genetics the authors ask how should these affect our understanding of distributive justice equality of opportunity the rights and obligations as parents the meaning of disability and the role of the concept of human nature in ethical theory and practice The book offers a historical context to contemporary debate over the use of these technologies by examining the eugenics movement of the late nineteenth and early twentieth centuries The questions raised in this book will be of interest to any reflective reader concerned about science and society and the rapid development of biotechnology as well as to professionals in such areas as philosophy bioethics medical ethics health management law and political science

Design and Destiny Ronald Cole-Turner, 2008 Scholars discuss the genetic modification of embryonic cells from the viewpoints of traditional Jewish and Christian teaching considering both the possible therapeutic benefits of this technology and moral concerns about its implementation We are approaching the day when advances in biotechnology will allow parents to design a baby with the traits they want The continuing debate over the possibilities of genetic engineering has been spirited but so far largely confined to the realms of bioethics and public policy Design and Destiny approaches the question in religious terms discussing human germline modification the genetic modification of the embryonic cells that become the eggs or sperm of a developing organism from the viewpoints of traditional Christian and Jewish teaching The contributors leading religious scholars and writers call our attention not to technology but to humanity reflecting upon the meaning and destiny of human life in a technological age Many of these scholars argue that religious teaching can support human germline modification implemented for therapeutic reasons although they offer certain moral conditions that must be met The essays offer a surprising variety of opinions including a discussion of Judaism's traditional presumption in favor of medicine and

argument that Catholic doctrine could accept germline modification if it is therapeutic for the embryo an argument implying that traditional Christian teaching permits germline modification whether for therapy or enhancement and a classical Protestant view that germline modification should be categorically opposed Contributors Lisa Sowle Cahill Nigel M de S Cameron Ronald Cole Turner Amy Michelle DeBaets Celia Deane Drummond Elliot Dorff H Tristram Engelhardt Jr Thomas A Shannon James J Walter The Significance of Free Will Robert Kane,1998 Robert Kane provides a critical overview of debates about free will of the past half century relating this recent inquiry to the broader history of the free will issue and to vital currents of twentieth century thought Kane also defends a traditional libertarian or incompatibilist view of free will one that insists upon the incompatibility of free will and determinism employing arguments that are both new to philosophy and that respond to contemporary developments in physics and biology neuro science and the cognitive and behavioral sciences

The Oxford Handbook of Reproductive Ethics Leslie Francis,2016-12-28 Intimate and medicalized natural and technological reproduction poses some of the most challenging ethical dilemmas of our time Reproduction presses the boundaries of humanity and ethical respect the permissible limits of technology conscientious objection by health care professionals and social justice This volume brings together scholars from multiple perspectives to address both traditional and novel questions about the rights and responsibilities of human reproducers their caregivers and the societies in which they live Among issues treated in the volume are what it is to be a parent the responsibilities of parents and the role of society in facilitating or discouraging parenting May gamete donors be anonymous Is surrogacy in which a woman gestates a child for others ethically permissible when efforts are made to prevent coercion or exploitation Should it be mandatory to screen newborns for potentially serious conditions or permissible to sequence their genomes Are both parties to a reproductive act equally responsible to support the child even if one deceived the other Are there ethical asymmetries between male and female parents and is the lack of available contraceptives for men unjust Should the costs of infertility treatment be socially shared as they are for other forms of health care Do parents have a duty to try to conceive children under the best circumstances they can or to avoid conception if the child will suffer What is the status of the fetus and what ethical limits constrain the use of fetal tissue Reproduction is a rapidly changing medical field with novel developments such as mitochondrial transfer or uterine transplantation occurring regularly And there are emerging natural challenges too with Zika virus just the latest The volume gives readers tools not only to address the problems we now know but ones that may emerge in the future as well Criminology as a Moral Science Anthony E Bottoms,Jonathan Jacobs,2023-09-07 This book proposes an explicit recognition of criminology as a moral science a philosophically textured appreciation of the presence and role of values in people s reasoning and motivation set within an empirically rigorous social scientific account This endeavour requires input from both criminologists and philosophers and careful dialogue between them Criminology as a Moral Science provides such a dialogue not least about the so called fact value distinction but also about substantive topics such as guilt

and shame The book also provides philosophically informed accounts of morality in practice in several criminological contexts these include whistleblowing practices within a police service the dilemmas of mothers about who and what to tell about a partner s imprisonment and how persistent offenders begin to try to turn their lives around to desist from crime The issues raised go to the heart of some currently pressing topics within criminology notably the development of evidence based practice which requires some kind of stable bridge to be built between research evidence facts and proposals for policy evaluative recommendations

Philoponus: On Aristotle Physics 2 A.R. Lacey, 2014-04-10 Book 2 of the Physics is arguably the best introduction to Aristotle s work both because it explains some of his central concepts such as nature and the four causes and because it asks some gripping questions that are still debated today Is chance something real If so what Can nature be explained by chance necessity and natural selection or is it purposive Philoponus commentary is not only a valuable guide but also a work of Neoplatonism with its own views on causation the Providence of Nature the problem of evil and the immortality of the soul
