From Mineralogy To Geology The Foundations Of A Science 1650 1830:

From Mineralogy to Geology Rachel Laudan, 1994-02-02 A fine treatment of this critical time in geology's history. Although it goes against our standard histories of the field, Laudan defends her views convincingly. Her style is direct with carefully reasoned personal opinions and interpretations clearly defined. Jere H. Lipps, *The Scientist*. *The Multidimensionality of Hermeneutic Phenomenology* Babette Babich, Dimitri Ginev, 2014-01-15 This book offers new reflections on the life world from both phenomenological and hermeneutic perspectives. It presents a prism for a new philosophy of science and technology, especially including the social sciences but also the environment as well as questions of ethics and philosophical aesthetics in addition to exploring the themes of theology and religion. Inspired by the many contributions made by the philosopher Joseph Kockelmans, this book examines the past, present and future prospects of hermeneutic phenomenology. It raises key questions of truth and method as well as highlights both continental and analytic traditions of philosophy. Contributors to *The Multidimensionality of Hermeneutic Phenomenology* include leading scholars in the field as well as new voices representing analytic philosophers of science, hermeneutic and phenomenological philosophers of science, scholars of comparative literature, theorists of environmental studies, specialists in phenomenological ethics and experts in classical hermeneutics. *The Age of Projects* Maximilian E. Novak, 2008-08-23 The Projecting Age was a term the English novelist Daniel Defoe used to describe the end of the seventeenth century. This term could just as easily be used however to describe the period known as the Long Eighteenth Century, 1660-1789. The Age of Projects uses the notion of a project as a key to understanding the massive social, cultural, political, literary and scientific transitions that occurred in Europe during this time. The contributors to this collection examine fraudulent, grandiose, altruistic and idealistic projects that reveal the period's radical breaks from the past and its preoccupation with the future. Examining topics as diverse as Jonathan Swift's satire on the possibility of a computer to Gottfried Leibniz's effort to build one and Edmund Burke's prediction that the project of democratic governance would be taken over by greedy adventurers, this volume provides significant insight into the period's ambitions for an improved future. A well-balanced collection by leading scholars from diverse disciplines, *The Age of Projects* is a significant contribution to intellectual history, literary history and the history of science. *From Natural Philosophy to the Sciences* David Cahan, 2003-09-15 During the nineteenth century, much of the modern scientific enterprise took shape: scientific disciplines were formed, institutions and communities were founded and unprecedented applications to and interactions with other aspects of society and culture occurred. In this book, eleven leading historians of science assess what their field has taught us about this exciting time and identify issues that remain unexamined or require reconsideration. They treat both scientific disciplines—biology, physics, chemistry, the earth sciences, mathematics and the social sciences—in their specific intellectual and sociocultural contexts as well as the broader topics of science and medicine, science and religion, scientific institutions and communities and science, technology and industry.

Providing a much needed overview and analysis of a rapidly expanding field From Natural Philosophy to the Sciences will be essential for historians of science but also of great interest to scholars of all aspects of nineteenth century life and culture Contributors Bernadette Bensaude Vincent Jed Z Buchwald David Cahan Joseph Dauben Frederick Gregory Michael Hagner Sungook Hong David R Oldroyd Theodore M Porter Robert J Richards Ulrich Wengenroth *From Geoheritage to Geoparks* Ezzoura Errami, Margaret Brocx, Vic Semeniuk, 2015-01-13 This unique book is dedicated to helping promote geoheritage geoconservation and geoparks in Africa and the Middle East Local regional global and thematic case studies including a geoheritage toolkit are used to illustrate the scope and depth of geoheritage and highlight some current geoparks and aspiring candidates in Africa the Middle East China Europe and Australia This special issue mainly consists of the proceedings of the First International Conference on Geoparks in Africa and Middle East FICGAME held in El Jadida Morocco in 2011 The conference hosted by the Faculty of Sciences of Chouaib Doukkali University was organized by the African Geoparks Network and the African Association of Women in Geosciences in collaboration with the UNESCO Cairo Office

North Nanna Katrine Lüders Kaalund, 2021-05-11 Science in the Arctic changed dramatically over the course of the nineteenth century when early scattered attempts in the region to gather knowledge about all aspects of the natural world transitioned to a more unified Arctic science under the First International Polar Year in 1882 The IPY brought together researchers from multiple countries with the aim of undertaking systematic and coordinated experiments and observations in the Arctic and Antarctic Harsh conditions intense isolation and acute danger inevitably impacted the making and communicating of scientific knowledge At the same time changes in ideas about what it meant to be an authoritative observer of natural phenomena were linked to tensions in imperial ambitions national identities and international collaborations of the IPY Through a focused study of travel narratives in the British Danish Canadian and American contexts Nanna Katrine L ders Kaalund uncovers not only the transnational nature of Arctic exploration but also how the publication and reception of literature about it shaped an extreme environment its explorers and their scientific practices She reveals how far beyond the metropole in the vast area we understand today as the North American and Greenlandic Arctic explorations and the narratives that followed ultimately influenced the production of field science in the nineteenth century

A Natural History of Time Pascal Richet, 2009-10-15 The quest to pinpoint the age of the Earth is nearly as old as humanity itself For most of history people trusted mythology or religion to provide the answer even though nature abounds with clues to the past of the Earth and the stars In A Natural History of Time geophysicist Pascal Richet tells the fascinating story of how scientists and philosophers examined those clues and from them built a chronological scale that has made it possible to reconstruct the history of nature itself Richet begins his story with mythological traditions which were heavily influenced by the seasons and almost uniformly viewed time cyclically The linear history promulgated by Judaism with its story of creation was an exception and it was that tradition that drove early Christian attempts to date the Earth For instance in 169 CE the bishop of Antioch for instance declared that the world had been in existence for 5 698 years and the odd months and days Until the mid eighteenth century such natural timescales derived from biblical chronologies prevailed but Richet demonstrates with the Scientific Revolution geological and astronomical evidence for much longer timescales began to accumulate Fossils and the developing science of geology provided compelling evidence for periods of millions and millions of years a scale that even scientists had difficulty grasping By the end of the twentieth century new tools such as radiometric dating had demonstrated that the solar system is four and a half billion years old and the universe itself about twice that though controversial questions remain The quest for time is a story of ingenuity and determination and like a geologist Pascal Richet carefully peels back the strata of that history giving us a chance to marvel at each layer and truly appreciate how far our knowledge and our planet have come

Marx's Ecology John Bellamy Foster, 2000-03-01 Progress requires the conquest of nature Or does it This startling new account overturns conventional interpretations of Marx and in the process outlines a more rational approach to the current environmental crisis Marx it is often assumed cared only about

industrial growth and the development of economic forces John Bellamy Foster examines Marx's neglected writings on capitalist agriculture and soil ecology philosophical naturalism and evolutionary theory He shows that Marx known as a powerful critic of capitalist society was also deeply concerned with the changing human relationship to nature Marx's Ecology covers many other thinkers including Epicurus Charles Darwin Thomas Malthus Ludwig Feuerbach P J Proudhon and William Paley By reconstructing a materialist conception of nature and society Marx's Ecology challenges the spiritualism prevalent in the modern Green movement pointing toward a method that offers more lasting and sustainable solutions to the ecological crisis

Charles Darwin, Geologist Sandra Herbert, 2005 Pleasure of imagination I a geologist have illdefined notion of land covered with ocean former animals slow force cracking surface c truly poetical from Charles Darwin's Notebook M 1838 The early nineteenth century was a golden age for the study of geology New discoveries in the field were greeted with the same enthusiasm reserved today for advances in the biomedical sciences In her long awaited account of Charles Darwin's intellectual development Sandra Herbert focuses on his geological training research and thought asking both how geology influenced Darwin and how Darwin influenced the science Elegantly written extensively illustrated and informed by the author's prodigious research in Darwin's papers and in the nineteenth century history of earth sciences *Charles Darwin Geologist* provides a fresh perspective on the life and accomplishments of this exemplary thinker As Herbert reveals Darwin's great ambition as a young scientist one he only partially realized was to create a simple geology based on movements of the earth's crust Only one part of his scheme has survived in close to the form in which he imagined it a theory explaining the structure and distribution of coral reefs Darwin collected geological specimens and took extensive notes on geology during all of his travels His grand adventure as a geologist took place during the circumnavigation of the earth by H M S Beagle 1831 1836 the same voyage that informed his magnum opus *On the Origin of Species* Upon his return to England it was his geological findings that first excited scientific and public opinion Geologists including Darwin's former teachers proved a receptive audience the British government sponsored publication of his research and the general public welcomed his discoveries about the earth's crust Because of ill health Darwin's years as a geological traveler ended much too soon his last major geological fieldwork took place in Wales when he was only thirty three However the experience had been transformative the methods and hypotheses of Victorian era geology Herbert suggests profoundly shaped Darwin's mind and his scientific methods as he worked toward a full blown understanding of evolution and natural selection

Industrial Enlightenment Peter M. Jones,2017-10-03 Industrial Enlightenment explores the transition through which England passed between 1760 and 1820 on the way to becoming the world s first industrialised nation In drawing attention to the important role played by scientific knowledge it focuses on a dimension of this transition which is often overlooked by historians The book argues that in certain favoured regions England underwent a process whereby useful knowledge was fused with technological know how to produce the condition described here as Industrial Enlightenment At the forefront of the process were the natural philosophers who entered into a close and productive relationship with technologists and entrepreneurs Much of the evidence for this study is drawn from the extraordinary archival record of the activities of Matthew Boulton 1728 1809 and his Soho Manufactory The book will appeal to those keen to explore the dynamics of change in eighteenth century England and to those with a broad interest in the cultural history of science and technology
