Fundamentals of Building Energy Dynamics

Bruce D. Hunn

J. Douglas Balcomb

Fundamentals of Building Energy Dynamics Bruce D. Hunn, 1996 Fundamentals of Building Energy Dynamics assesses how and why buildings use energy and how energy use and peak demand can be reduced It provides a basis for integrating energy efficiency and solar approaches in ways that will allow building owners and designers to balance the need to minimize initial costs operating costs and life cycle costs with need to maintain reliable building operations and enhance environmental quality both inside and outside the building Chapters trace the development of building energy systems and analyze the demand side of solar applications as a means for determining what portion of a building s energy requirements can potentially be met by solar energy Following the introduction the book provides an overview of energy usepatterns in the aggregate U S building population Chapter 3 surveys work on the energy flows in an individual building and shows how these flows interact to influence overall energy use Chapter 4 presents the analytical methods techniques and tools developed to calculate and analyze energy use in buildings while chapter 5 provides an extensive survey of the energy conservation and management strategies developed in the post energy crisis period. The approach taken is a commonsensical one starting with the proposition that the purpose of buildings is to house human activities and that conservation measures that negatively affect such activities are based on false economies The goal is to determine rational strategies for the design of new buildings and the retrofit of existing buildings to bring them up to modern standards of energy use The energy flows examined are both large scale heating systems and small scale choices among appliances Solar Heat Technologies Fundamentals and Solar Heat Technologies: Fundamentals of building energy dynamics ,1988 Applications Volume 4 History and Overview of Solar Heat Technologies Donald A. Beattie, 1997 This final volume in a series that has surveyed advances in solar energy research since the oil shock of the early 1970s provides a broad overview of the U S solar thermal program It summarizes the conclusions of each of the nine technical volumes in the series and offers lessons drawn from the program for future governmental efforts to foster specific technologies Reading this history it becomes clear that what was unique about the federal solar program was its attempt to create research guidelines that included commercialization as part of the expected outcome The three contributors all active participants in the solar project are quite candid about what worked and what did not and why The result is a tale of bureaucracy and politics worth pondering as we debate the proper relationship between government and science Passive Solar Buildings J. Douglas Balcomb, 1992 Describes developments in passive solar technology that will save time energy and resources in planning for the buildings of the future This companion to Passive Cooling and Solar Building Architecture volumes 8 and 9 describes developments in passive solar technology that will save time energy and resources in planning for the buildings of the future It is filled with tips and useful research for architects and designers and includes three substantial chapters on general modeling Passive solar heating works Properly designed and constructed it is cost effective practical comfortable and aesthetic Balcomb's introductory remarks set the tone

for the rest of the contributions which describe the considerable record of achievements in passive solar heating Balcomb summarizes and evaluates the era between 1976 and 1983 when most of the major developments took place and highlights the design features that have contributed to effective buildings Three chapters cover modeling passive systems applicable to both heating and cooling and six chapters focus on the application of passive solar heating with emphasis on components analytical results for specific systems test modules subsystem integration into buildings performance monitoring and results and design tools J Douglas Balcomb is a Principal Engineer with the Solar Energy Research Institute Solar Thermal Technology Ronal W. Larson, Ronald Emmett West, 1996 Implementation of Solar Thermal Technology describes the successes and failures of the commercialization efforts of the U S solar thermal energy program from the oil embargo of 1973 through the demise of the program in the early Reagan administration and its afterlife since then The emphasis throughout is on lessons learned from the solar experience with an eye toward applications to other projects as well as toward possible renewal of efforts at commercialization Part I discusses the history of government involvement in solar development and the parallel development of the market for solar products Part II looks at the histories of specific commercialization programs for five areas active heating and cooling passive technologies passive commercial building activities industrial process heat and high temperature technologies Parts III VIII focus in turn on demonstration and construction projects quality assurance information dissemination programs efforts to transfer technology to industry incentive programs tax credits financing and grants and organizational support Solar Heat Technologies Fundamentals and Solar Collectors, Energy Storage, and Materials Francis DeWinter, 1990 Solar Collectors Applications Volume 10 Energy Storage and Materials covers the materials and basic components needed for solar thermal energy systems Using thermal performance and durability as the major criteria the twenty six chapters emphasize the modeling and assessment of devices rather than their application or cost Each part begins with an overview and concludes with an assessment of current issues and opportunities. The contributors have been careful to document failures as well as successes in materials research This is the fifth volume in a series that distills the results of the intensive research on and development of solar thermal energy conversion technologies from 1975 to 1986 Francis de Winter is President of the Altas Corporation Santa Cruz California and a member of the Santa Cruz Energy Advisory Committee Contents Solar Collectors Collector Concepts and Designs Optical Theory and Modeling of Solar Collectors Thermal Theory and Modeling of Solar Collectors Testing and Evaluation of Stationary Collectors Testing and Evaluation of Tracking Collectors Optical Research and Development Collector Thermal Research and Development Collector Engineering Research and Development Solar Pond Research and Development Reliability and Durability of Solar Collectors Environmental Degradation of Low Cost Solar Collectors Energy Storage for Solar Systems Storage Concepts and Design Analytical and Numerical Modeling of Thermal Conversion Systems Testing and Evaluation of Thermal Energy Storage Systems Storage Research and Development Materials for Solar

Naraghi, 2020 Active Solar Systems George O. G. Löf, 1993 Active Solar Systems is volume 6 in a series that surveys advances in solar energy research since the oil shock of the early 1970s Books in the series document in particular the period 1973 to 1985 which spawned a rich array of federally financed technological programs and developments facilitating the practical use of solar energy The twenty two contributions in Active Solar Systems introduce design analysis and control methods for active systems and cover advances in the interconnected technologies for water heating space heating and space cooling They show that with effective marketing and with environmental costs factored into individual consumer decisions there is strong potential for solar water heating and space heating and that solar cooling has potential but needs further development to become commercially viable The details of the materials involved in these technologies are covered in volume 5 Solar Collectors Energy Storage and Materials The Energy Journal ,1997
