Dear Reader Here is your book Take it run with it pass it punt it enjoy all the many things that you can do with it but above all read it Like all textbooks it was written to help you increase your knowledge unlike all too many textbooks that you have bought it will be fun to read A preface usually tells of the author's reasons for writing the book and the author's goals for the reader followed by a swarm of other important matters that must be attended to yet fit nowhere else in the book I am fortunate in being able to include an insightful prepublication review that goes directly to my motivations and goals Look for it following this preface That leaves only those other important matters In preparing the text I consulted a number of books chief of which included these S Chandrasekhar Ellipsoidal Figures of Equilibrium Yale University Press 1969 J M A Danby Fundamentals of Celestial Mechanics Macmillan 1962 Now available in a 2nd edition 3rd printing revised corrected and enlarged Willmann Bell 1992 Y Hagihara Theories of Equilibrium Figures of a Rotating Homogeneous Fluid Mass NASA 1970 R A Lyttleton The Stability of Rotating Liquid Masses Cambridge University Press 1953 C B Officer Introduction to Theoretical Geophysics Springer Verlag 1974 A S Ramsey Newtonian Attraction Cambridge University Press 1949 W M Smart Celestial Mechanics Longmans Green and Co 1953 Fundamentals of Astronomy Cesare Barbieri, Ivano Bertini, 2020-11-24

Providing a broad overview of foundational concepts this second edition of Fundamentals of Astronomy covers topics ranging from spherical astronomy to reference systems and celestial mechanics to astronomical photometry and spectroscopy It expounds arguments of classical astronomy that provided the foundation for modern astrometry whilst presenting the latest results of the very long baseline interferometry VLBI radio technique optical interferometers and satellites such as Hipparcos and GAIA and recent resolutions of the IAU and IERS regarding precession forced and free nutation and Earth figure and rotation Concepts of general relativity are explored such as the advance of Mercury's perihelion light deflection and black holes in addition to the physical properties orbits and ephemerides of planets comets and asteroids with an extension to visual binary stars orbital reconstruction Extrasolar planets are also discussed with reference to radial velocity and transits measurements by ground and space telescopes Basic concepts of astronomical photometry spectroscopy and polarimetry are given including the influence of the terrestrial atmosphere Classical works such as Hipparchus are mentioned in order to provide a flavor of the historical development of the field It is an ideal textbook for undergraduate and graduate students studying astronomy astrophysics mathematics and engineering Supplementary and explanatory notes provide readers with references to additional material published in other literature and scientific journals whilst solved and unsolved exercises allow students to review their understanding of the material Features Provides an introductory vision of arguments from spherical astronomy to celestial mechanics to astronomical photometry and

the last edition was published in 1992 Astronomical positions are intertwined with timescales and relativity in The Astronomical Almanac so related chapters are provided in The Explanatory Supplement The Astronomical Almanac also includes information on lunar and solar eclipses physical ephemerides of solar system bodies and calendars so The Explanatory Supplement expounds upon each of these topics as well The book is written at a technical but non expert level As such it provides an important reference for a full range of users including astronomers engineers navigators surveyors space scientists and educators *Planetary Sciences* Imke de Pater, Jack J.
