

FUNDAMENTALS OF ELECTRICITY

1. What is charge?

- Charge is a physical property that causes matter to experience a force within an electromagnetic field. Electric charges may be positive or negative in nature. If no net electric charge is present, the matter is considered to be neutral or uncharged.

2. Explain Coulomb's Law.

- Coulomb's law states that the electrical force between two charged objects is directly proportional to the product of the quantity of charge on the objects and inversely proportional to the square of the separation distance between the two objects.

3. What is Electric Force?

-An electric force is the interaction of either attractive force or repulsive force between two charged bodies. This force is similar to other forces because it affects and impacts towards a particular object and can be easily demonstrated by Newton's law of motion. Electric force is one of the forces which is exerted over other bodies.

4. How is the electric field similar to the electric force?

- Electric field is defined as the electric force per unit charge. The direction of the field is taken to be the direction of the force it would exert on a positive test charge. The electric field is radially outward from a positive charge and radially inward toward a negative point charge.

5. How is the electric field related /used Gauss Law?

- Gauss's law for the electric field describes the static electric field generated by a distribution of electric charges. It states that the electric flux through any closed surface is proportional to the total electric charge enclosed by this surface.

6. Define Electric Flux.

- Electric flux, property of an electric field that may be thought of as the number of electric lines of force (or electric field lines) that intersect a given area.
