books *How do Experts Forecast Sovereign Spreads?* Jacopo Cimadomo, Peter Claeys, Mr. Marcos Poplawski-Ribeiro, 2016-08-16 This paper assesses how forecasting experts form their expectations about future government bond spreads Using monthly survey forecasts for France Italy and the United Kingdom between January 1993 and October 2014 we test whether respondents consider the expected evolution of the fiscal balance and other economic fundamentals to be significant drivers of the expected bond yield differential over a benchmark German 10 year bond Our main result is that a projected improvement of the fiscal outlook significantly reduces expected sovereign spreads This suggests that credible fiscal plans affect market experts expectations and reduce the pressure on sovereign bond markets In addition we show that expected fundamentals generally play a more important role in explaining forecasted spreads compared to realized spreads

Rethinking Expectations Roman Frydman, Edmund S. Phelps, 2013 This book originated from a 2010 conference marking the fortieth anniversary of the publication of the landmark Phelps volume *Microeconomic Foundations of Employment and Inflation Theory* a book that is often credited with pioneering the currently dominant approach to macroeconomic analysis However in their provocative introductory essay Roman Frydman and Edmund Phelps argue that the vast majority of macroeconomic and finance models developed over the last four decades derailed rather than built on the Phelps volume s microfoundations approach Whereas the contributors to the 1970 volume recognized the fundamental importance of according market participants expectations an autonomous role contemporary models rely on the rational expectations hypothesis REH which rules out such a role by design The financial crisis that began in 2007 preceded by a spectacular boom and bust in asset prices that REH models implied could never happen has spurred a quest for fresh approaches to macroeconomic analysis While the alternatives to REH presented in *Rethinking Expectations* differ from the approach taken in the original Phelps volume they are notable for returning to its major theme understanding aggregate outcomes requires according expectations an autonomous role In the introductory essay Frydman and Phelps interpret the various efforts to reconstruct the field some of which promise to chart its direction for decades to come The contributors include Philippe Aghion Sheila Dow George W Evans Roger E A Farmer Roman Frydman Michael D Goldberg Roger Guesnerie Seppo Honkapohja Katarina Juselius Enisse Kharroubi Blake LeBaron Edmund S Phelps John B Taylor Michael Woodford and Gylfi Zoega

Wind Power Ensemble Forecasting André Gensler, 2019-01-16 This thesis describes performance measures and ensemble architectures for deterministic and probabilistic forecasts using the application example of wind power forecasting and proposes a novel scheme for the situation dependent aggregation of forecasting

models For performance measures error scores for deterministic as well as probabilistic forecasts are compared and their characteristics are shown in detail For the evaluation of deterministic forecasts a categorization by basic error measure and normalization technique is introduced that simplifies the process of choosing an appropriate error measure for certain forecasting tasks Furthermore a scheme for the common evaluation of different forms of probabilistic forecasts is proposed Based on the analysis of the error scores a novel hierarchical aggregation technique for both deterministic and probabilistic forecasting models is proposed that dynamically weights individual forecasts using multiple weighting factors such as weather situation and lead time dependent weighting In the experimental evaluation it is shown that the forecasting quality of the proposed technique is able to outperform other state of the art forecasting models and ensembles
