Fundamentals of Geriatric Medicine Rainier P. Soriano, 2007-05-26 Prior to the evolution of modern medicine with its superabundance of diagnostic and therapeutic medical technology and the rise of the litigious society the value of clinical skills was evident in both history taking and the physical examination Even today physicians can make a correct diagnosis solely by utilizing their clinical skills in about 90% of patient encounters Furthermore in the past physicians understood their role as a psychologist and were more apt to be familiar with the social context of their patients House calls were common The doctor was also a placebo who at his best inspired hope and probably sped recovery Geriatricians use both clinical skills and take advantage of modern technology sparingly for they know they are dealing with the most challenging and frail of patients older patients who so often present with multiple complex interacting behavioral social and physical problems In contrast to medicine for young people working with the older patient is much more demanding Furthermore the complex issue of societal attitudes toward old people can come into play especially the physician's need to deal with natural fears of aging dependency depression dementia and death Ageism is the enemy of effective medical treatment At its best geriatrics exemplifies ways that medical care for all ages can become more humane problem oriented and holistic

Fundamentals of Geriatric Medicine Ronald D. Cape, 1983-01-01 **Geriatric Medicine** C.K. Cassel, J.R. Walsh, 2012-12-06 With the appearance of a textbook as comprehensive as this one it is clear that the field of geriatrics is coming of age The broad scope of these volumes shapes a substantial answer to the question What is geriatrics and why should we be interested in it As I see it there are at least five reasons First the scientific or intellectual reason gerontology is the study of aging from the biologic psychological and social perspectives There is increasing interest in the fascinating insights into the biologic mechanisms of aging errors in protein synthesis DNA repair mechanisms alterations of the neuroendocrine system changes in the immune system genetic controls and somatic mutations Second the demographic reason this is the century of old age There has been a 26 year gain in the average life expectancy This gain compares with that acquired from 3 000 years B C the Bronze Age to the year 1900 which was about 29 years Therefore in one century there has been a gain in the average life expectancy almost equal to 5 000 previous years of human history In 1830 one of three newborn infants survived beyond 60 years of age

Cutler, P.K. Narang, 2013-11-11 Clinical trials are the most definitive tool for evaluation of the applicability of clinical investigations The main objective of clinical investigations is to assess the potential

value of a therapeutic entity in the treatment or prophylaxis of a disease or a condition. It is also deemed necessary at this stage to obtain information regarding the undesirable side effects, associated risks, and their interrelationship with clinical assessments. Most of these clinical investigations conform in some form or fashion to the guidelines adopted by the Food and Drug Administration (FDA) for a given class of compounds. Clinical investigations in the past have not included specific studies in special or subpopulations, e.g., the elderly. Because of an ever-increasing elderly population, newer policies for clinical investigations are now being debated with the recognition of enhanced drug sensitivity in this special population. This key research activity can lead not only to improved health care in the elderly but also to control of its costs. *Drug Misuse Among the Elderly and Its Impact on Community-based Care* United States.
