Wiger, 2018-05-14 Healthcare improvements is constantly relevant and an important topic Healthcare is frequently being called upon to be more cost efficient and still fulfil demands regarding waiting times quality and availability Experience from structural changes in other contexts gives reason to be positive about the potential for logistics improvements in the healthcare sector as well From a logistics perspective patients pass different care functions units organisations and health facilities It is assumed that logistics management knowledge applied in healthcare can lead to lower costs shorter waiting times better patient service shorter treatment times and increased capacity This dissertation therefore presents an exploration of how logistics management theories can be operationalised in a healthcare context to understand care chain effectiveness Theoretically the operationalisation is done by systems theory creating compatibility between logistics management theories and the healthcare context As a first step features for a logistics system forms features for achieving care chain effectiveness High care chain effectiveness is thus a desired condition and the care delivery system is the tool to achieve it As the final step in the operationalisation the features for care chain effectiveness are in turn used to analyse today's practices Empirically the research is based on qualitative data from a single case study with multiple units of analysis It includes four care units at one of Sweden's university hospitals where the data is gathered through interviews insight into management systems and document analysis One of the main results is the 21 areas identified for analysing today's practices by means of features for care chain effectiveness Another main result is the four important concepts revealed through the operationalisation Lead time the episode of care from order to delivery as the amount of time for patient cases between first contact with healthcare and the last Patient order fulfilment fulfilment of patients needs broken down into several smaller steps performed over time within different care units in one or several organisations consisting of five sub processes order handling diagnosis treatment follow up and discharge True demand patients needs that is to be met and thus sets what care to deliver i.e the production plan and the subordinate resource plan System boundaries defines which care units to include when focusing on the care delivery system's performance as a whole and should be more important than the performance

and productivity of each individual care unit A number of direct suggestions for care chain improvement can also be found in the concluding remarks for example that objectives linked to economic influx or penalty narrow the system and that lead time data on an aggregated level is needed to cover episodes of care The theoretical contribution of the dissertation is to the field of logistics management through the methodological development of using these theories in a new context The managerial contribution is to healthcare managers through providing opportunities to improve care chains primarily by means of a greater understanding of care delivery systems *Fundamentals of Logistics Management* L. **Supply Chain Management** Khalid Zidan,2016-05-25 FREE BONUS Included How to be a better leader Supply Chain Management The supply chain is not a new concept for economists The idea of the supply chain is a basic one that has permeated economic systems since the earliest days of trade and commerce It is simply a term referring to the collection of businesses or individuals responsible for transforming raw materials into products and then getting those products into the hands of consumers Though it may be obvious to some it is important to remember that supply chains exist

whether or not they are managed it is a term that refers to the processes necessary to turn raw materials into a product and distribute them to customers The difference in the modern era is not that supply chains have been invented but that they have become a much more complicated proposition given the expansion of the international economy that s been made possible by the rise of the internet and globalization Whereas in the past businesses worked with mainly local or regional suppliers and factories the door is now opened for a company in the United States to own a factory in India and a warehouse in Japan all without having ever stepped foot outside their city The customer end of the supply chain has been similarly opened up Shopping on the internet allows anyone anywhere to find and buy from your company a double edged sword that lets you expand your reach even as a small business but also increases the competition presented by other small businesses everywhere in the world Chapters Chapter 1 Introduction to Supply Chains Chapter 2 Supply Chain Modeling Past and Present Chapter 3 Upstream Processes Chapter 4 Downstream Processes Chapter 5 Integrated Companies Chapter 6 Effective Supply Chain Management Bonus FREE How to be a better leader Bonus FREE 30 minutes call with me
