called y . The object is to determine what formula the machine uses to arrive at y . Each puzzle starts with three sample equations as follows: in $x=2$ out $y=8$; in $x=5$ out $y=20$; in $x=9$ out $y=36$. In this case the machine applied the formula to $2 \cdot 5 \cdot 9$ and arrived at $8 \cdot 20 \cdot 36$. The outcomes y 's are greater than the input so addition, multiplication, or a combination of operations are part of the formula. The formula applied is $x \times 4 \cdot y \cdot 2 \times 4 \cdot 8$ etc. Use the diagram on the next page to create a transparency that can be used to present the concept before assigning the various puzzles as classwork and/or assignments. Students need to be creative using addition, subtraction, multiplication, etc. when searching for solutions to each puzzle. Have fun and think!
