Future Developments in Blood Banking C.Th. Smit Sibinga,P.C. Das,T.J. Greenwalt,2012-12-06 Proceedings of the Tenth Annual Symposium on Blood Transfusion Groningen 1985 organized by the Red Cross Blood Bank Groningen Drenthe

Future Developments in Blood Banking Smith Sibinga,P. C. Das,T. J. Greenwalt,1996 New Developments in Blood Transfusion Research Brian R. Peterson,2006 Although blood transfusion saves lives and reduces morbidities in many clinical diseases and conditions it is associated with certain risks A transfusion related adverse event also called transfusion reaction is any unfavourable event occurring in a patient during or after blood transfusion About 0.5 per cent to 3 per cent of all transfusions result in some adverse events but the majority of them are minor reactions with no significant consequences In general transfusion related adverse events are categorised as infectious and non infectious However there are other classifications in the literature based on time of occurrence i.e. acute versus delayed or physiological mechanism i.e. immune mediated versus non immune mediated A significant proportion of adverse events may occur as a result of errors in preparation ordering or administration of blood and blood products This book contains the latest research in this essential field which has been revolutionised in recent decades

Trigger Factors in Transfusion Medicine C.Th. Smit Sibinga,P.C. Das,E.L. Snyder,2012-12-06 It is an honour and a pleasure to welcome you all at this 20th annual International Symposium on Blood Transfusion in the Netherlands This year you celebrate its 20th anniversary and I congratulate the Staff of the Blood Bank Noord Nederland and especially Dr Smit Sibinga for this great achievement As most of you know the name of the person of Dr Smit Sibinga is unbreakably connected with the annual symposium in Groningen which he has organized each year from the very start 20 years ago The reputation of any symposium depends heavily on the quality of the lectures I think it is not possible to organize 20 symposia in a row if the topics lack actual relevance and the speakers are not of excellent reputation Dr Smit Sibinga has proven to have a keen eye for selecting interesting themes and eminent speakers Although a lot of different topics have been dealt with in the past 20 years which each attracted the attention of a different group in the field of blood transfusion it is not surprising that after a tradition of 20 years several speakers but also a lot of attendees are not for the first time in Groningen to participate in this event It gives the symposium a unique atmosphere of intimacy It is not hard to admit that most of the newer developments in transfusion medicine take place outside the Netherlands

Good Manufacturing Practice in Transfusion Medicine C.Th. Smit Sibinga,P.C. Das,H.J. Heiniger,2012-12-06 TQM AND TAYLORISM HOW THEY COMPARE H Bremer Preface The industrial world today is divided between two camps a culture based on the principles of Total Quality Management TQM developed in the Far East and one still strongly influenced by the origins of Scientific Management introduced in the West by F W Taylor and others at the turn of the century This divergence will be shown to have arisen in the last forty years long enough for a new generation of managers and corresponding culture

to emerge The two cultures are so deeply entrenched that it is difficult for one to change to the other However there is strong evidence to support the contention that people oriented TQM is superior and those companies clinging to Taylor models now face difficult decisions Actions by Taylor companies to move to TQM might well be hindered rather than helped by applying present Quality Assurance Standards developed by Taylor oriented national and international Standards Institutions

Coagulation and Blood Transfusion C.Th. Smit Sibinga,P.C. Das,P.M. Mannucci,2012-12-06 With great pleasure I welcome you to the City of Groningen In more than one way there is cause for celebration Today marks the third lustrum of the annual international symposium on blood transfusion organized by the Rode Kruis Bloedbank Groningen Drenthe In my opinion it has been a remarkable initiative of the Bloedbank to start organizing a scientific conference as it did in 1976 It meant among others that in case of success the initiative would grow to be an annual item on the international congress calendar It also meant that a possible third lustrum would coincide with the celebration of the 950th anniversary of the City of Groningen I am happy to note that the initiative has been successful over the past fourteen years the Rode Kruis Bloedbank Groningen Drenthe has succeeded in organizing an annual symposium on blood transfusion with a different theme each year and with an average attendance of 250 participants from some 26 countries world wide The platform created with the special formula of the symposium for science and industry has been well balanced and beneficial to both Mr Chairman ladies and gentlemen I like to compliment the organizers with the success that they have attained Allow me to mention the name of just one person in whom I like to thank everyone who has been involved in creating the annual Bloedbank symposia my warm congratulations to Dr Smit Sibinga and his staff

Cryopreservation and low temperature biology in blood transfusion C.Th. Smit Sibinga,P.C. Das,H.T. Meryman,2012-12-06 The theme of this 14th International Symposium on Blood Transfusion is closely related to the work and scientific contributions of the Dutch cryobiology pioneer Dr Herman W Krijnen of the Dutch Red Cross Central Laboratory Dr Krijnen was known and respected in the national and international blood transfusion community as an extremely competent scientist and a beloved and admired colleague Dr Krijnen was intentionally honoured with the invitation to open this symposium on cryopreservation and low temperature biology in blood transfusion and be the guest of honour at this event Unfortunately Dr Krijnen suddenly died on the first of June 1989 In honour and memory of Dr Krijnen this symposium will therefore be dedicated to him Since the 10th International Symposium on Blood Transfusion in 1985 highlighted the theme of Future developments in blood banking major changes have occurred in the blood banking world Most of these changes were forced upon the Blood Banks by the fear of spreading AIDS through contaminated donations This not only led to the wide spread testing of blood but also to a more appropriate counselling of the community and the blood donors in specific Additionally virus inactivation techniques were introduced for those components derived from multiple donations and intended for a regular transfusion in haemophilia patients and others

Molecular Biology in Blood Transfusion Cees Smit Sibinga,Harvey G. Klein,2000-09-30 The international symposia on

blood transfusion in Groningen have taken place without interruption since 1976 Each year Dr Smit Sibinga and his team have not only organized a meeting on timely topics in blood transfusion but also succeeded in attracting prominent chairmen and speakers The subject of the 24th Symposium was Molecular Biology in Blood Transfusion and it was chaired by Dr Harvey G Klein National Institutes of Health USA In this book of proceedings an extraordinary range of subjects is covered including diagnostic aspects virology quality control cell and protein processing as well as a section on new horizons in clinical medicine **White cells and platelets in blood transfusion** C.Th. Smit Sibinga,P.C. Das,C.P.

Engelfriet,2012-12-06 As a clinical discipline blood transfusion encompasses enormous vista vary ing from biotechnology to molecular biology from plasma products cell biology and growth factors to interleukines Growth of knowledge in this field has been rapid and expertise is now required to be mastered and renewed in translating these ideas for patient care Various types of cells could be harvested progenitor stem cells derived from bone marrow or from circulating blood as a source for transplants in the hemostatic armoury platelets could be used prophylactically granulocytes and mononuclear cells are available for treatment of infections or immune modulations However their therapeutic use carries potential complications including graft versus host disease and CMV infection Prevention of such complications by irradiation and by removal of immunocompetent leukocytes are important issues Thus production of such therapeutic materials ought to address the issues at the earliest to eliminate those problems while adhering to the concept of high quality the impact of storing platelets for longer periods by using improved plastic containers or storing almost indefinitely in frozen state should be explored Rapid progress in cell culture techniques and bio technology have enriched the transfusion medicine armoury with lympho kines interferons and cell colony growth factors which have great potentials for enhancement of basic knowledge as well as considerable therapeutic applications in patients *Biotechnology in blood transfusion* C.Th. Smit Sibinga,P.C. Das,L.R. Overby,2012-12-06 This symposium is devoted to Biotechnology in Blood Transfusion there are 22 experts discussing the state of the art in the application of monoclonal anti bodies recombinant DNA technologies and heterologous expression systems to the improvement and sometimes replacement of blood products characterization of blood constituents and the effect of these developments on blood transfusion procedures Ten and maybe five years ago the title of a symposium such as this would have been Biosciences in blood transfusion informing what basic developments in molecular biology biochemistry and human physiology might pertain to blood transfusion in the distant future That future is getting closer and not only one is interested in basic developments in immunology recognition and identification of viral and bacterial components and products tissue and blood bloodgroup blood group typing typing but also in the potential application of these developments and their economic perspectives That is what biotechnology is all about basic science tells us where and how we might look for new technologies and the development of such technologies is only possible if there is a perspective for improvement in quality safety acceptance or performance to cost ratio *Automation in blood transfusion* C.Th. Smit

Sibinga,P.C. Das,C.F. Högman,2013-11-11 With this symposium the Red Cross Blood Bank Groningen Drenthe affirms its well known reputation as an organizer of symposia of high standard and quality Several important aspects of bloodbanking have been discussed in the past The Blood Bank here is a specialist in its own field Administrative processes in respect of the donor information processes the preparation of the blood and the laboratory process are automatized New developments in these fields are underway that you will certainly identify and investigate I do hope that you will come to conclusions from which we can learn and get better results As general manager of the Development and Investments Company for the Northern Netherlands NOM for several reasons I am very much interested in the outcome of this symposium In the first place I am proud that the Red Cross Blood Bank Groningen Drenthe is doing its utmost to be excellent in regard of research education and bloodprocessing In being so the Blood Bank can produce spinn offs for healthservices and the related industry
