[Pursuit-Evasion Games and Graph Theory](#) Anthony Bonato, 2022-06-16 Graphs measure interactions between objects such as

friendship links on Twitter transactions between Bitcoin users and the flow of energy in a food chain While graphs statically represent interacting systems they may also be used to model dynamic interactions For example imagine an invisible evader loose on a graph leaving only behind breadcrumb clues to their whereabouts You set out with pursuers of your own seeking out the evader's location Would you be able to detect their location If so then how many resources are needed for detection and how fast can that happen These basic seeming questions point towards the broad conceptual framework of pursuit evasion games played on graphs Central to pursuit evasion games on graphs is the idea of optimizing certain parameters whether they are the cop number burning number or localization number for example This book would be excellent for a second course in graph theory at the undergraduate or graduate level It surveys different areas in graph searching and highlights many fascinating topics intersecting classical graph theory geometry and combinatorial designs Each chapter ends with approximately twenty exercises and five larger scale projects

**Sex and Friendship in Baboons** Barbara B. Smuts, 2017-09-29 Those who have been privileged to watch baboons long enough to know them as individuals and who have learned to interpret some of their more subtle interactions will attest that the rapid flow of baboon behavior can at times be overwhelming In fact some of the most sophisticated and influential observation methods for sampling vertebrate social behavior grew out of baboon studies invented by scientists who were trying to cope with the intricacies of baboon behavior Barbara Smuts eloquent study of baboons reveals a new depth to their behavior and extends the theories needed to account for it While adhering to the most scrupulous methodological strictures the author maintains an open research strategy respecting her subjects by approaching them with the open mind of an ethnographer and immersing herself in the complexities of baboon social life before formulating her research design allowing her to detect and document a new level of subtlety in their behavior At the Gilgil site described in this book she could stroll and sit within a few feet of her subjects By maintaining such proximity she was able to watch and listen to intimate exchanges within the troop she was able in other words to shift the baboons well along the continuum from subject to informant By doing so she has illuminated new networks of special relationships in baboons This empirical contribution accompanies theoretical insights that not only help to explain many of the inconsistencies of previous studies but also provide the foundation for a whole new dimension in the study of primate behavior analysis of the dynamics of long term intimate relationships and their evolutionary significance At every stage of research human observers have underestimated the baboon These intelligent curious emotional and long lived creatures are capable of employing stratagems and forming relationships that are not easily detected by traditional research methods In the process
