From Cognitive Semantics To Lexical Pragmatics The Functional Polysemy Of Discourse Particles:

From Cognitive Semantics to Lexical Pragmatics Kerstin Fischer, 2000 This book presents a cognitive semantic model of what the whole range of functions is that English and German discourse particles can fulfil how these functions are related why discourse particles fulfil just these functions and not others and what factors condition their interpretation

Methodologically conversation analysis and various methods from lexical semantics such as field analysis and semantic decomposition as well as contrastive studies are combined with the statistical analyses of large corpora simulation experiments involving supervised learning in artificial neural networks and the representation of the results in a computational lexicon This methodologically interdisciplinary study thus not only presents a general model of polysemy which includes structural aspects a conceptual background frame and the contribution of the lexeme it also provides full coverage for the functional readings of discourse particles and a unified definition of the word class

This volume brings together a number of articles on the form and function of extra clausal constituents a group of linguistic elements which have puzzled linguists by defying analysis in terms of ordinary sentence grammar Given their high frequency and communicative importance these elements can however no longer be dismissed as a marginal linguistic phenomenon In recent years this awareness has resulted not only in more systematic treatments of extra clausal constituents but has also highlighted the need to account for them in grammatical theory Based on mainly English corpus data the volume investigates the discourse pragmatic semantic syntactic and phonological features of a range of extra clausal constituents including discourse markers free adjuncts left dislocands insubordinate clauses and various kinds of adverbials The individual chapters adopt a number of different perspectives investigating the diachronic development of extra clausal constituents their multi functionality and their use in bilingual settings also addressing the question of how they can be incorporated into existing models of grammar
